SUMMARY

All of the bedrock formations in the area are of Precambrian age and consist of a northwesterly trending isoclinally folded sequence of supracrustal metavolcanics / metasediments. The metavolcanics range in composition from ultramafic to felsic. A large granitoid batholith bounds the property area to the south and north-northwest trending faults and diabase dykes are a common feature of the area.

Fort Knox Gold Resources recently drilled (1991-1992) a nickel-copper discovery in ultramafic rocks on their property lying immediately to the west of the subject claims. In addition, Fort Knox did some work directed towards the discovery of volcanogenic massive sulphide-type copper-zinc mineralization within their property.

All of the subject property is covered by glacial deposits and there are no outcrops within the property area. Geophysical surveys and mapping by the Ontario government (Carter, 1977) suggest that the subject claim group is underlain by ultramafic flows and possibly felsic metavolcanics.

A program of line-cutting (48.8 km) and magnetometer and VLF-EM surveys has recently been completed on the property and has indicated three (3) geophysically anomalous areas. The most interesting anomaly lies along the baseline and trends NW. The second anomaly is in the southeastern portion of the property and the third in the southwestern part.

Additional work is recommended to further evaluate the potential of the property.

1. INTRODUCTION

The Fawcett Township property consists of 3 contiguous, unpatented mining claims (31 units) in the north-central part of Fawcett Township, Shining Tree area, northeastern Ontario. The property is midway between Sudbury and Timmins, being approximately 150 kilometres from each city (Figure 1). The 31 claim group is immediately east of the Fort Knox Gold Resources property where a nickel-copper discovery was recently made. The discovery announcement reported a 110.9 foot (33.8 m) drill intersection grading 1.03% nickel and 0.43% copper in hole SG-2. Subsequently, mineralization over a strike length of 900 ft. (274 m) and to a depth of 1,300 ft. (396 m) has been reported.

Since the early part of the 1900's there has been considerable exploration activity in the Shining Tree area. This work was mainly directed towards the search for gold and silver with the effort peaking in the 1930's. There has only been limited exploration activity for base metals.

Following the recommendations of the Winter report (1993) a programme of line-cutting and geophysics has been carried out on the Fawcett Township Property. Geophysical surveys consisted of a magnetometer and VLF electromagnetic survey. The following report summarizes the findings of these geophysical surveys and makes recommendations for further exploration work.

2. PROPERTY

2.1 CLAIM DESCRIPTION

The property consists of three (3) block claims comprising 31 units as listed in Table 1 below and shown in Figure 2. The claims were staked in October of 1991, and are recorded in the Larder Lake Mining Division. The claims are currently on extension, subject to the completion of the

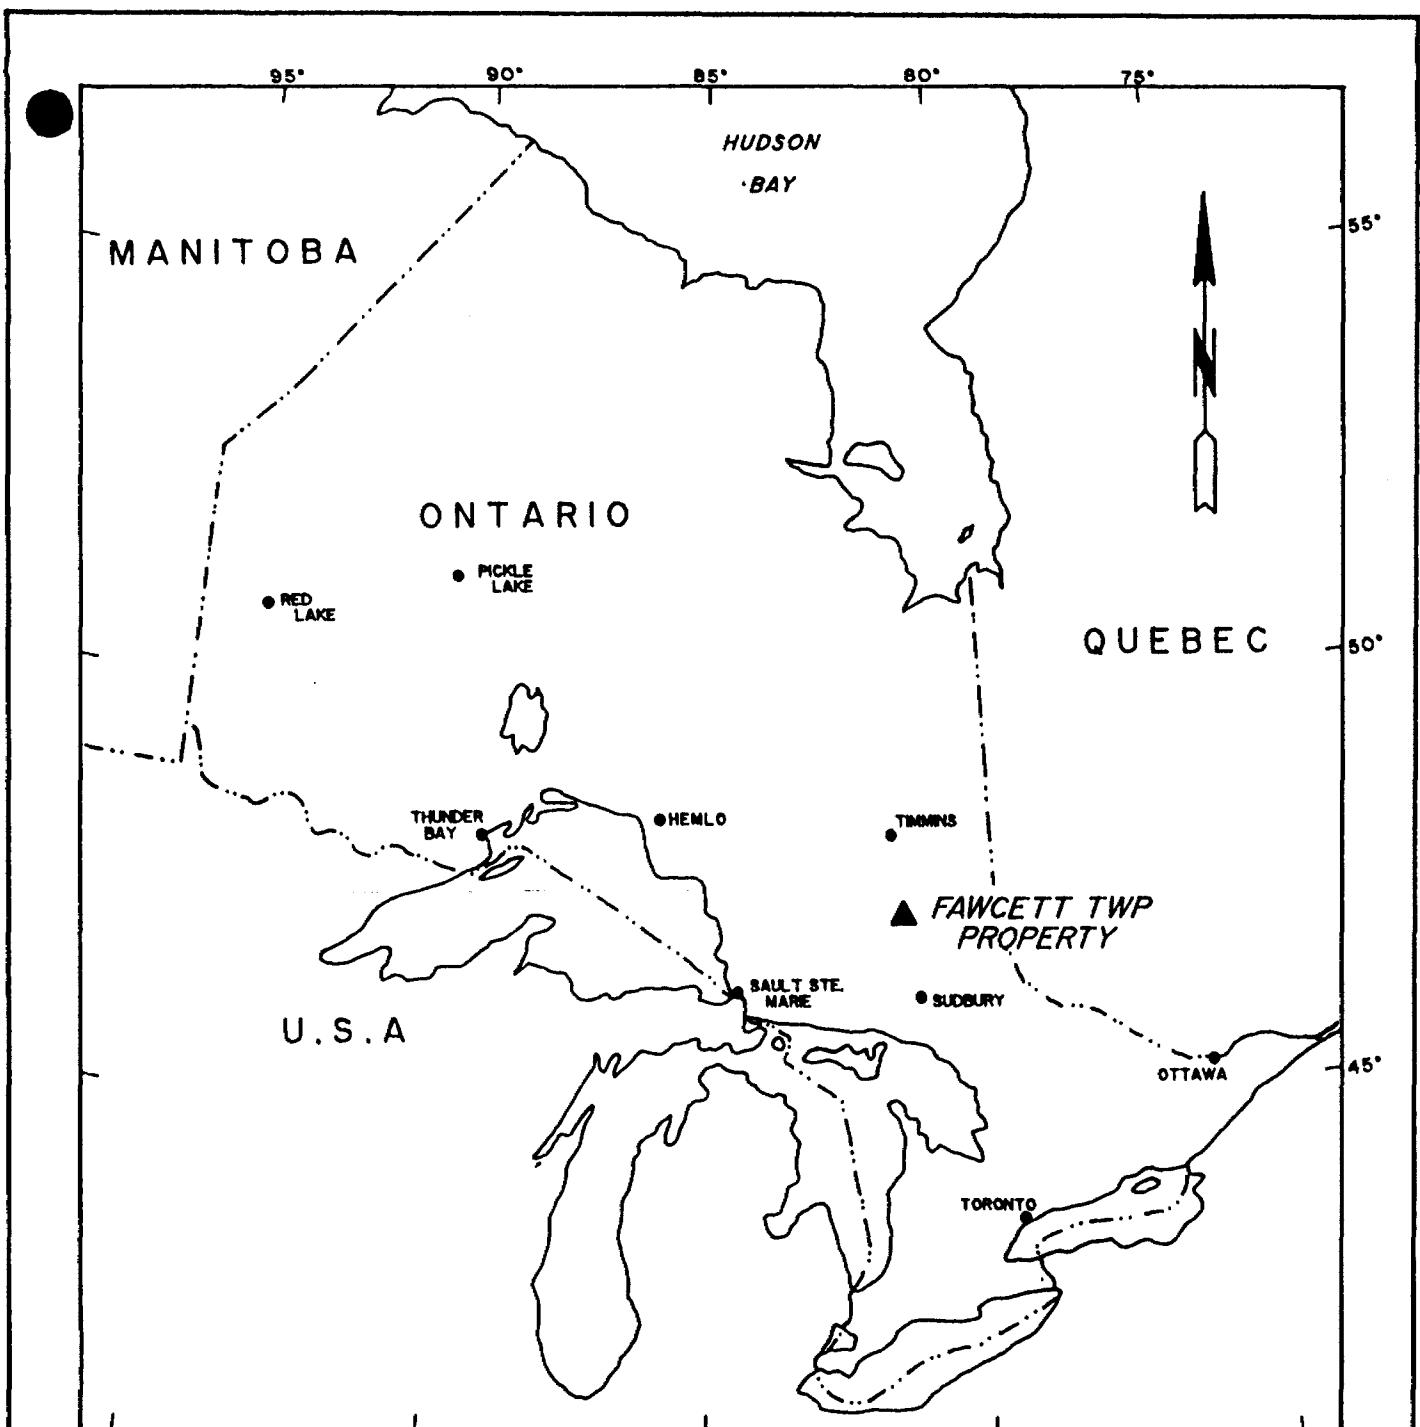

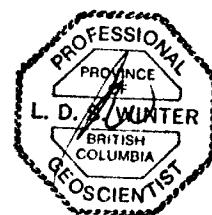

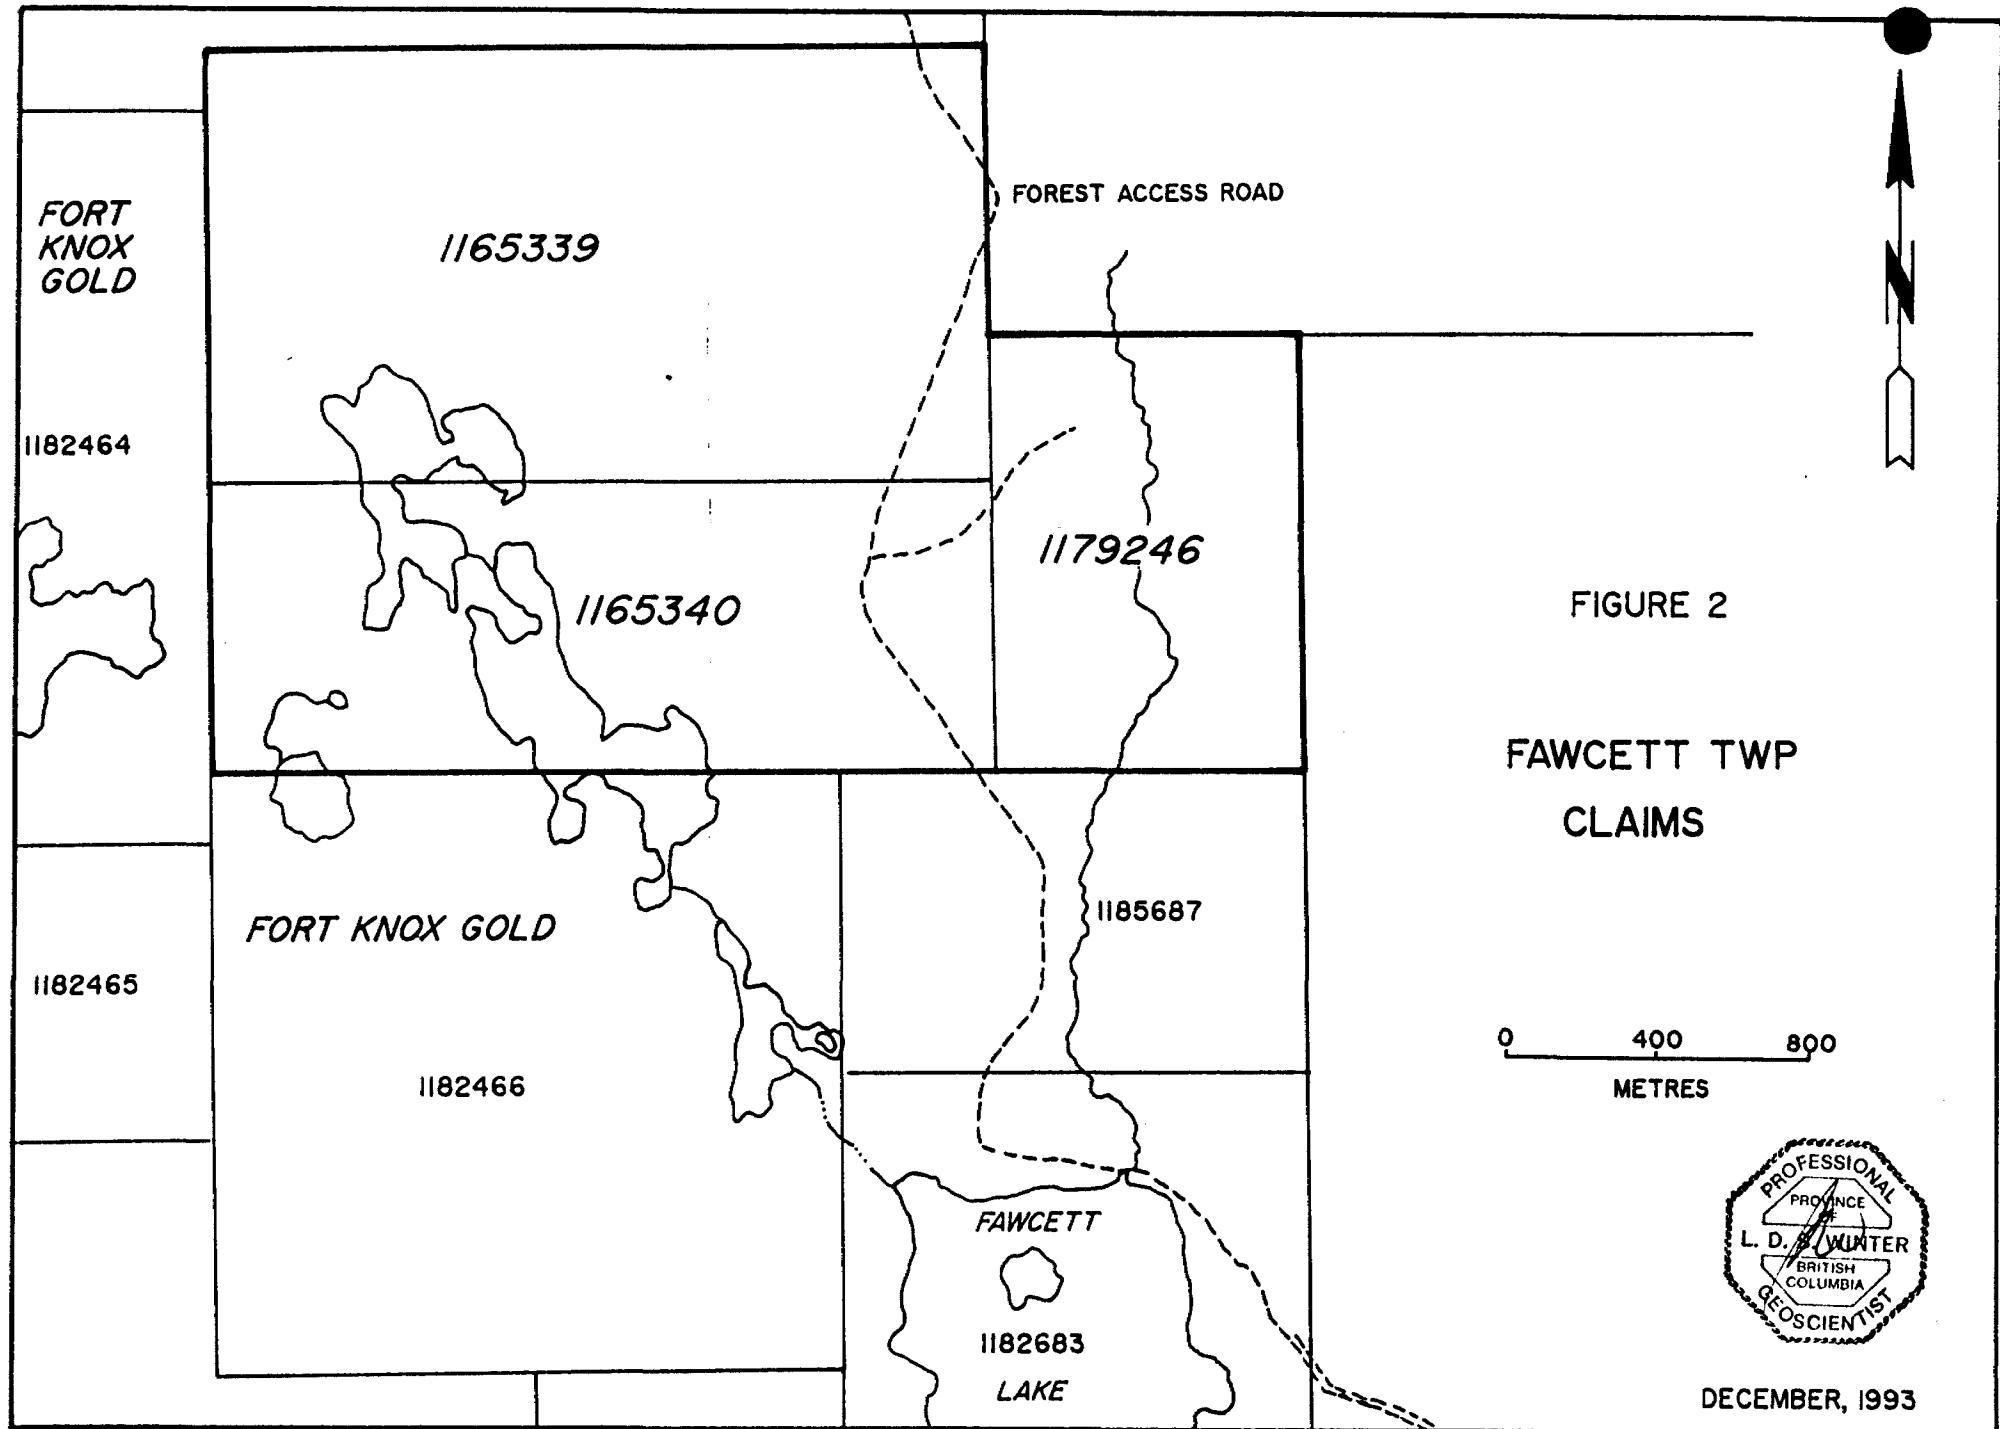

FIGURE 1

DECEMBER, 1993

geophysical work described in this report.

Table 1
Fawcett Township Claim Group

Claim	Units	Area (hectares)
1165339	15	240
1165340	10	160
1179246	6	96
Total	31	496

2.2 LOCATION AND ACCESS

The 31 claim units are located in the north-central part of Fawcett Township at 47° 35'N latitude, 81° 07'W longitude, 10 kilometres east of Shining Tree and 30 kilometres west-southwest of Gowganda, Ontario. The NTS co-ordinates for the area are 41P/11.

The property can be easily accessed by road from Sudbury, north on Hwy 144, a distance of 150 kilometres to provincial Hwy. 580. Hwy. 580 is also 150 kilometres south of Timmins. From Hwy. 144, hwy. 580 leads east, a distance of approximately 80 kilometres to the Fawcett and Ogilvie townships forest access road. This road traverses the eastern part of the claim group (Figure 2).

2.3 TOPOGRAPHY AND VEGETATION

The area has a gently rolling topography influenced by the general bedrock configuration and the overlying glacial deposits. In the general area of the property, there is a considerable cover of glacial material that may be up to 20 metres thick.

The area is well forested with spruce, jackpine and birch and poplar. The area is being actively logged with the result that some areas have been clear-cut.

2.4 INFRASTRUCTURE

Hwy. 560 is a paved provincial highway and the Fawcett township forest access road is an all-weather gravel road. Electric power and services are available in the villages of Shining Tree and Gowganda and full services are available in Timmins to the north, the Tri-Town area to the east and Sudbury to the south.

3. GEOLOGY

3.1 REGIONAL GEOLOGY

Fawcett township was mapped by Carter (1977) for the Ontario Division of Mines, (Ontario Geological Survey). The following description is summarized from Geoscience Report 146, Geology of Fawcett and Leonard townships.

All of the bedrock formations in the area are of Precambrian age and these are covered by a thin veneer of Pleistocene and Recent deposits.

The early Precambrian (Archean) rocks comprise a metavolcanic-metasedimentary sequence interlayered with ultramafic flows/sills and iron formation. An intrusive quartz monzonite pluton and northeasterly and northwesterly trending diabase dykes intrude the supracrustal sequence. The metavolcanic / metasedimentary rocks consist dominantly of mafic flows with some intermediate to felsic flows and pyroclastics. The ultramafic rocks consist of serpentinized material of original dunitic and peridotitic composition and are of minor

aerial extent. The largest body of this type occurs in the southeastern part of the township. It is not exposed but was encountered in diamond drilling and it appears to extend northwestwards across the township based on the airborne magnetics.

Northwesterly striking diabase dykes of Matachewan-type cut the metavolcanics, metasediments and the quartz monzonite. A few northeasterly trending diabase dykes cut all other units and are probably part of the Abitibi swarm.

Middle Precambrian rocks are represented by the Nipissing diabase and Huronian sediments of the Gowganda and Lorraine formations of the Cobalt group which unconformably overlie the early Precambrian rocks immediately east of Fawcett township. The Nipissing diabase occurs as sill-like intrusives into the Early Precambrian formations.

Structurally the metavolcanics ad metasediments are isoclinally folded about northwesterly trending axes into a series of parallel antiforms and synforms. The major faults trend north-northwesterly, postdate the Nipissing diabase and appear to have developed a number of faults, blocks within the area.

The Granite Lake pluton of quartz monzonitic composition is intrusive into the supracrustal sequences and underlies most of the southern part of the township.

The copper-nickel and copper-zinc mineralization being evaluated by Fort Knox Gold Resources occurs within the supracrustal units immediately north of the Granite Lake pluton. The nickel-copper mineralization is associated with ultramafics while the copper-zinc mineralization is associated with metavolcanics and associated metasediments.

3.2 PROPERTY GEOLOGY

Based on the writer's property visit and mapping by the Ontario Geological Survey, it appears that there is no outcrop in the area of the subject claims. The area is covered by a thick layer of glacial material. Carter (1977) shows that the property is situated within a sequence of northwest-southeast trending metavolcanics with the supracrustal units having been isoclinally folded about northwest-southeast trending fold axes. All units in the area dip vertically to sub-vertically.

Within the property are two (2) broad magnetic highs. The one through the central part of the property is considered to represent ultramafic units within the volcanic sequence. Carter (*ibid*) shows this ultramafic unit continuing to the south-southeast, based on the airborne geophysics. It is in this area that Raylloyd Mines and Explorations Limited intersected ultramafics containing millerite and pentlandite (nickel mineralization) (*Assessment Files*). The cause of the second magnetic anomaly in the eastern part of the claims is unknown due to the lack of outcrop.

Approximately 1,500 metres southwest of the subject claims, the volcanic units are in contact with a granitoid batholith which occupies much of the region to the south.

Based on the regional geology, there are a number of north-northwest trending faults and diabase dykes in the area and their presence within the subject property should be anticipated. These structures show an east-side north apparent movement.

The Fort Knox Gold Resources nickel-copper discovery is located 2.4 km due west of the claim block and the area of interesting copper-zinc mineralization is located 3 km to the northwest along strike of the metavolcanic units.

4. LOGISTICS AND PERSONNEL

The survey crew was deployed on a daily basis from a camp set up on the Fawcett Township property. Line-cutting and geophysical work commenced on September 25, 1993 and surveys across the ice were finished December 10, 1993.

The line-cutting crew consisted of the following personnel:

Dan Patrie, party chief, Massey, Ontario

Brent Patrie, Massey, Ontario

Anthony Burli, Massey, Ontario

Scott Whalen, Massey, Ontario

Both magnetometer and VLF-EM surveys were carried out by Dan Patrie and Anthony Burli.

The data plotting was done by Insinna Consulting Services.

5. LINE-CUTTING PROGRAMME

A detailed metric grid was established to cover the Fawcett Township claim group. In total 48.8 km of line were cut consisting of 4.0 km of baseline and tie-line and 44.8 km of crosslines.

The grid consists of a baseline, tie-lines and crosslines from L 0+00 to L 27+00 East. Orientation of the baseline is azimuth 120 degrees. Crosslines, turned off at 90 degrees from the baseline, were established at 100 meter intervals with pickets erected at 25 meter spacing.

6. GEOPHYSICAL PROGRAMME

The geophysical program consisted of a total field magnetometer survey and a VLF electromagnetic survey. Readings were taken at 25 meter intervals on all surveyed lines including the baseline and tie-lines. The survey was carried out using two (2) EDA OMNI PLUS magnetometer/VLF units and an OMNI-IV base station magnetometer. A total of 528 stations were read.

6.1 Instrumentation and Survey Procedure

The EDA OMNI PLUS with an OMNI-IV base station magnetometer was used to carry out the magnetic survey. These are total field magnetometers which measure the magnetic field through the use of proton precessional effects caused by the interaction of a magnetic field with a spin-aligned, proton-rich fluid. An instrument accuracy, precision, and resolution of 0.1 Nt may be obtained with these instruments under ideal conditions. Microprocessors contained in these instruments allow for the collection of the reading, along with the time and its position, in digital form suitable for transfer to portable computers.

The total magnetic field was measured at 25 meter intervals along all lines. Total field measurements were concurrently recorded at 30 second intervals by the base station magnetometer, which was located on the grid. All field measurements were corrected for diurnal variations of the earth's magnetic field by direct subtraction of the base station reading from the field reading taken at the same time. The corrected magnetic data has been plotted, contoured and is presented in the Total Magnetic Field plot.

The VLF-EM in-phase and quadrature measurements were taken using the transmitter at Cutler, Maine, U.S.A. transmitting at a frequency of 24.0 KHz. Readings were taken every 25 meters

along all grid lines. The data was Fraser-filtered and contoured and is presented in the Fraser-Filter VLF-EM map. The VLF-EM data is also presented on a second map as in-phase and quadrature profiles.

All data was stored on diskette in AUDOCAD files.

Instrumentation specifications are included as Appendix A of this report.

6.2 REGIONAL GEOPHYSICS

Fawcett Township and the surrounding area has recently been covered by a GEOTEM airborne electromagnetic and magnetic survey carried out by Geoterrex Limited for the Ontario Geological Survey (1990). The survey was flown along lines directed northeast-southwest and with a 200 metre line spacing. There are no EM conductors indicated on the subject claims however, the magnetic results confirm the geological presentation of Carter (1970). In the southwestern third of the property, a band of northwest-southeast trending magnetic highs is present which is interpreted to represent ultramafic flows. This would be a similar environment to that hosting the Fort Knox Gold Resources copper-nickel mineralization to the northwest and the Raylloyd mineralization to the south-southeast. In the eastern part of the property, a second area of elevated magnetics trending northwesterly may be due to ultramafic flows but there is no outcropping to confirm this. Between these two (2) areas is an area of low, generally flat magnetics, which is considered to represent intermediate to felsic metavolcanics.

On a regional basis, the Fawcett Township property lies on the southern flank of a large regional gravity high. This would suggest that there is a significant volcanic pile in the region, a favourable environment for the localization of sulphide

deposits.

6.3 PROPERTY GEOPHYSICS

There are three geophysically anomalous areas on the property. The most interesting is a linear magnetic anomaly trending NW along BL 0+00. The second anomaly is located in the southeast portion of the property and the third is located in the southwestern corner of the property.

The Baseline anomaly consists of magnetic highs trending NW along BL 0+00. The anomalies peak between 800 and 1600 Nt. A VLF anomaly coincides with one section of the magnetic anomaly at L 10+00 E, 1+50 S. The VLF anomaly has a Fraser filter peak of 40%, which along with the magnetic signature denotes a mineralized target. The absence of a linear VLF anomaly may be due to the depth of overburden on the property. This target is an excellent candidate for further geophysical testing.

The southeastern anomalies are a number of small anomalies grouped together and cover an area east of L 27+00 E, BL 0+00 to L 18+00 E, 7+50 N. The anomalies peak between 800 and 1200 Nt in magnitude at distinct locations in the anomalous area eg. L 20+00 E, 7+00 N. The VLF survey has only one valid anomaly which corresponds to a magnetic anomaly located at L 23+00 E to L 27+00 E at 8+50 N. There are two very large VLF anomalies, each located at a single station on the grid. It is considered that these anomalies are not valid targets for exploration and are probably caused by fluctuations in the signal field or by an instrumentation problem. The anomalies on the east section of the property should be further tested geophysically to determine their validity.

The western anomaly is a small magnetic anomaly, peaking at 400 to 800 nT and trending parallel to the baseline target. A

VLF anomaly of 40% (Fraser filter value) corresponds directly to a portion of the magnetic anomaly. The general location for this target is L 7+00 E, 10+50 S.

7. CONCLUSIONS AND RECOMMENDATIONS

The property is all overburdened covered. To further evaluate the property additional geophysics to asses the potential of the three (3) identified target areas is recommended. Based on the results of the present surveys, it is recommended that;

1. A Horizontal Loop survey be conducted over the entire property using a 200 metre cable and reading 2 frequencies (222 Hz. and 1777Hz.)and,
2. A Pulse E.M. survey be conducted over selected areas of the grid as a follow-up to horizontal loop survey.

The objective of additional geophysical work would be to identify sulphide mineralization of economic significance (Cu-Ni or Cu-Zn).

A handwritten signature "LDS Winter" is written over a circular professional seal. The seal has a decorative border and contains the text: "PROFESSIONAL", "PROVINCE OF", "L. D. S. WINTER", "BRITISH COLUMBIA", and "GEOSCIENTIST".

EDA OMNI PLUS VLF/MAGNETOMETER

OMNI PLUS Tri-line VLF Magnetometer System

EDA

Major Benefits of the OMNI PLUS

- Combined VLF/Magnetometer/Gradiometer System
- No Orientation Required
- Four VLF Magnetic Parameters Recorded
- Automatic Calculation of Fraser Filter
- Automatic Correction of Primary Field Variations
- Calculation of Ellipticity
- Measurement of VLF Electric Field

OMNI PLUS "Tie-Line" VLF / Magnetometer System

Description

The OMNI PLUS geophysical system combines the OMNI IV "Tie-Line" magnetometer and gradiometer together with a VLF measurement capability.

The OMNI PLUS VLF/Magnetometer System has been developed in co-operation with Geophysical Surveys Inc. of Quebec, Canada.

This brochure concentrates on the VLF magnetic and electric field parameters measured and recorded by the OMNI PLUS. More information on the OMNI PLUS magnetometer system and tie-line capability is available in the OMNI IV brochure.

- Measurement of up to three VLF transmitting stations to provide complete coverage of an anomaly regardless of the orientation of the survey grid or of the anomaly itself.
- Display descriptors to monitor the quality of the first two VLF transmitter signals being measured.
- Choice of three data storage modes:
 - spot record, for readings without grid coordinates
 - multi record, for multiple readings at one station
 - auto record, for automatic update of station number
- Output of grid coordinates with the designated compass bearing, using N, S, E, W descriptors.

three different transmitters, a magnetic total field reading and a simultaneous magnetic gradient reading. In addition, the OMNI PLUS can also measure and record two VLF electric field parameters from three different transmitters.

No Orientation Required

The OMNI PLUS requires no orientation, by the operator, of the sensor head toward the transmitter station. This simplifies field procedures as well as saving considerable survey time. When three VLF transmitters are measured, the benefits of this time-saving feature are automatically tripled. There is no requirement for the operator to orient himself and the sensor head toward the first selected transmitting station and then reorient towards the second or third transmitting station.

Features

Each OMNI PLUS incorporates the following features:

- Measurement and recording in memory of the following VLF data for each field reading:
 - vertical in-phase,
 - vertical quadrature (out-of-phase),
 - total field strength,
 - dip angle,
 - apparent resistivity,
 - phase angle,
 - time,
 - grid coordinates,
 - direction of travel along grid lines, and
 - natural and cultural features.
- Complete data protection for a number of years by an internal lithium backup battery.
- "Tie Line" or "Looping" algorithm, unique only to EDA's OMNI IV and OMNI PLUS Series, for the self-correction of atmospheric variations and variations in the primary field from the VLF transmitter(s).

Major Benefits

Combined VLF/Magnetometer / Gradiometer System

The OMNI PLUS incorporates the capabilities of the OMNI IV "Tie-Line" Magnetometer and Gradiometer System with the ability to measure the VLF magnetic and electric fields. Only one OMNI PLUS is needed to record all of the following geophysical parameters:

1. The total magnetic field
2. The simultaneous gradient of the total magnetic field
3. The VLF magnetic field, including:
 - the vertical in phase
 - the vertical quadrature
 - the total field strength
 - the dip angle
4. The VLF electric field, including:
 - the phase angle
 - apparent resistivity

As an example, at each location the OMNI PLUS can calculate and record in less than 8 seconds, four VLF magnetic field parameters from

consistent high quality data is achieved in the OMNI PLUS due to the utilization of three orthogonal sensor coils rather than two sensor coils used in conventional systems. The quality of data is not then dependent on the operator's ability to correctly orient the sensor head for optimum coupling with the transmitting station.

The OMNI PLUS compensates automatically for the direction of travel along the grid lines as well as for the angle of the sensors from the vertical plane through the use of tiltmeters.

Four VLF Magnetic Parameters Recorded

The OMNI PLUS calculates and records in memory the:

- vertical in phase
- vertical quadrature
- total field strength
- dip angle

The operator has the option to substitute the horizontal amplitude for the total field strength. The OMNI PLUS calculates each of these parameters from the in-phase and quadrature measurements of all three components.

Automatic Calculation of Fraser Filter

The OMNI PLUS automatically calculates the Fraser Filter, from the dip angle data, regardless of the interval between the stations along the grid lines. The operator no longer has to manually perform this mathematical calculation thereby reducing the possibility of human error. The Fraser Filter algorithm follows established conventions.

The operator can choose to output either the dip angle or the Fraser filtered data, or both.

Automatic Correction of Primary Field Variations

The OMNI PLUS can be used as a base station to monitor primary field changes from up to three VLF transmitters as well as alternately measuring the variations in the magnitude of the earth's magnetic field. Only one OMNI PLUS is needed to perform both functions.

The OMNI PLUS base station can then automatically correct, by linear interpolation, the field units for these drift variations in the primary VLF and total magnetic fields.

Calculation of Ellipticity

The OMNI PLUS calculates the true ellipticity of the VLF magnetic field from the measurement of the in-phase and quadrature of all three components. The ellipticity provides more interpretative information about the anomaly than the dip angle and is less influenced by overburden shielding.

- **Measurement of VLF Electric Field**

The OMNI PLUS calculates and records the apparent resistivity and phase angle from the measurement of the VLF electric field. This VLF electric field measurement can be accomplished by using capacitively or resistively coupled electrodes at spacings of 5, 10 or 20 meters.

Other Benefits

- **Automatic Tuning**

The OMNI PLUS automatically tunes up to three VLF transmitters within a frequency range of 15 to 30 kHz, once the operator has programmed in the specific frequencies.

- **Base Station Synchronization**

The OMNI PLUS has a unique "count-down" feature which can be activated in the field unit upon synchronization with the base station. The field unit then displays and decrements the remaining time, in seconds, until the base station is scheduled to take a measurement. The operator can obtain a field reading at exactly the same time as the base station. The simultaneous field and base station measurements significantly improve the automatic correction accuracy.

- **Automatic "Tie-Line" Correction**

The OMNI PLUS can automatically correct by itself the VLF field data for atmospheric variations and changes in the primary field originating from the VLF transmitter. By tying back into one or several tiepoints on the grid, the

OMNI PLUS will automatically calculate and apply the drift measured to the field data previously recorded in memory. More information on this unique "tie-line" method can be obtained from page 3 of the OMNI IV brochure.

- **Notation of Natural and Cultural Features**

The OMNI PLUS can record natural and cultural features unique to each grid location. This capability eliminates the need for a field notebook and provides additional information that can assist in interpreting recorded data.

- **Analogue Output**

Since VLF as well as magnetic data is often easier to interpret as a profile plot, data collected by the OMNI PLUS can be represented in analogue format at a vertical scale best suited for data presentation. The operator can selectively output in analogue and/or digital format, up to 10 of the following parameters:

- vertical in phase
- vertical quadrature
- VLF total field strength (or optional horizontal amplitude)
- dip angle
- Fraser filtered data
- ellipticity
- apparent resistivity
- phase angle
- magnetic total field strength
- magnetic vertical gradient

- **Computer Interface**

The OMNI PLUS can transfer uncorrected, corrected or filtered data to most computers with a RS232C port. In some cases, a DCA-100 Data Communications Adaptor may be required. Computers with collection packages including either "X-ON, X-OFF" or "ENQ/ACK" communications protocol formats are also compatible.

EDA

Specifications

Frequency Tuning Range	15 to 30 kHz, with bandwidth of 150 Hz; tuning range accommodates new Puerto Rico station at 28.5 kHz.
Transmitting Stations Measured	Up to 3 stations can be automatically measured at any given grid location within frequency tuning range.
Recorded VLF Magnetic Parameters	Vertical in phase, vertical quadrature (out-of-phase), total field strength (or optional horizontal amplitude), dip angle.
Standard Memory Capacity	1300 combined VLF magnetic and VLF electric measurements as well as gradiometer and magnetometer readings.
Display	Custom designed, ruggedized liquid crystal display with built-in heater and an operating temperature range from -40°C to +55°C. The display contains six numeric digits, decimal point, battery status monitor, signal strength status monitor and function descriptors.
RS232C Serial I/O Interface	Variable baud rate from 300 to 9600 baud, 8 data bits, 2 stop bits, no parity.
Test Mode	A. Diagnostic Testing (data and programmable memory). B. Self Test (hardware).
Sensor Head	Contains 3 orthogonally mounted coils with automatic tilt compensation.
Operating Environmental Range	-40°C to +55°C; 0 - 100% relative humidity; Weatherproof.
Power Supply	Non magnetic rechargeable sealed lead-acid 18V DC battery cartridge or belt; 18V DC disposable battery belt; 12V DC external power source for base station operation only.
Weights and Dimensions	
Instrument Console	3.8 kg, 122 x 246 x 210 mm.
Sensor Head	0.9 kg, 140 dia. x 130 mm.
VLF Electronics Module	1.7 kg, 280 x 190 x 60 mm.
Lead Acid Battery Cartridge	1.8 kg, 138 x 95 x 75 mm.
Lead Acid Battery Belt	1.8 kg, 540 x 100 x 40 mm.
Disposable Battery Belt	1.2 kg, 540 x 100 x 40 mm.

EDA Omni IV
Total Field and Gradient Magnetometer

Specifications

Dynamic Range	18,000 to 110,000 gammas. Roll-over display feature suppresses first significant digit upon exceeding 100,000 gammas.
Tuning Method	tuning value is calculated accurately utilizing a specially developed tuning algorithm
Automatic Fine Tuning	± 15% relative to ambient field strength of last stored value
Display Resolution	0.1 gamma
Processing Sensitivity	± 0.02 gamma
Statistical Error	0.01 gamma
Resolution Absolute Assurance	± 1 gamma at 50,000 gammas at 23°C ± 2 gamma over total temperature range
Standard Memory Capacity	
Total Field or Gradient Tie-Line Points	1,200 data blocks or sets of readings 100 data blocks or sets of readings
Base Station Display	5,000 data blocks or sets of readings Custom-designed, ruggedized liquid crystal display with an operating temperature range from -40°C to +55°C. The display contains six numeric digits, decimal point, battery status monitor, signal decay rate and signal amplitude monitor and function descriptors.
RS 232 Serial I/O	2400 baud, 8 data bits, 2 stop bits, no parity
Gradient Tolerance	6,000 gammas per meter (field proven)
Test Mode	<ul style="list-style-type: none">A. Diagnostic testing (data and programmable memory.)B. Self Test (hardware)

Sensor	Optimized miniature design. Magnetic cleanliness is consistent with the specified absolute accuracy.
Gradient Sensors	0.5 meter sensor separation (standard), normalized to gammas/meter. Optional 1.0 meter sensor separation available. Horizontal sensors optional.
Sensor Cable connector	Remains flexible in temperature range specified, includes strain-relief
Cycling Time (Base Station Mode)	Programmable from 5 seconds up to 60 minutes in 1 second increments
Operating Environment Range humidity;	-40°C to +55°C; 0-100% relative weatherproof
Power Supply lead-acid	Non-magnetic rechargeable sealed battery cartridge or belt; rechargeable NiCad or Disposable battery cartridge or belt; or 12V DC power source option for base station operation
Battery Cartridge/ Belt Life	2,000 to 5,000 readings, for sealed lead acid power supply, depending upon ambient temperature and rate of readings

Dear Sir/Madam:

**Subject: APPROVAL OF ASSESSMENT WORK CREDITS ON MINING CLAIMS
L.1165339 ET AL IN FAWCETT TOWNSHIP**

The assessment work credits for Geophysics filed under Section 14 of the Mining Act Regulations have been approved as outlined in the original submission.

The approval date is February 18, 1994.

If you have any questions regarding this correspondence, please contact Lucille Jerome at (705) 670-5855.

Yours sincerely,

Ron C. Gashinski
Senior Manager, Mining Lands Section

Credits you are claiming in this report may be cut back. In order to minimize the adverse effects of such deletions, please indicate from which claims you wish to prioritize the deletion of credits. Please mark (-) one of the following:

1. Credits are to be cut back starting with the claim listed last, working backwards.
 2. Credits are to be cut back equally over all claims contained in this report of work.
 3. Credits are to be cut back as prioritized on the attached appendix.

In the event that you have not specified your choice of proxy, option 3 will be used.

Note 1: Examples of beneficial interests are unencumbered transfers, options agreements, minor and joint interests.

I certify that the recorded holder find a beneficial interest in the patented or leased land at the time the work was performed

STATEMENT OF COSTS

État des coûts aux fins du crédit d'évaluation

Mining Act/Loi sur les mines

Transaction Number/Numéro de transaction

WJ 9380 • 00346

Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used to maintain a record and ongoing status of the mining claim(s). Questions about this collection should be directed to the Provincial Manager, Minerals Lands, Ministry of Northern Development and Mines, 4th Floor, 159 Cedar Street, Sudbury, Ontario P3E 6A5, telephone (705) 670-7264.

Les renseignements personnels contenus dans la présente formule sont recueillis en vertu de la Loi sur les mines et serviront à tenir à jour un registre des concessions minières. Adresser toute question sur la collecte de ces renseignements au chef provincial des terrains miniers, ministère du Développement du Nord et des Mines, 159, rue Cedar, 4^e étage, Sudbury (Ontario) P3E 6A5, téléphone (705) 670-7264.

1. Direct Costs/Coûts directs

Type	Description	Amount Montant	Totals Total global
Wages Salaires	Labour Main-d'œuvre	\$14,400	
	Field Supervision Supervision sur le terrain		14,400
Contractor's and Consultant's Fees Droits de l'entrepreneur et de l'expert- conseil	Type Geophysics	9,600	
	Report	2,500	
	Plotting	1,000	13,100
Supplies Used Fournitures utilisées	Type		
Equipment Rental Location de matériel	Type		
Total Direct Costs Total des coûts directs		27,500	

Note: The recorded holder will be required to verify expenditures claimed in this statement of costs within 30 days of a request for verification. If verification is not made, the Minister may reject for assessment work all or part of the assessment work submitted.

2. Indirect Costs/Coûts indirects

** Note: When claiming Rehabilitation work Indirect costs are not allowable as assessment work.
Pour le remboursement des travaux de réhabilitation, les coûts indirects ne sont pas admissibles en tant que travaux d'évaluation.

Type	Description	Amount Montant	Totals Total global
Transportation Transport	Type Vehicles-Km	1,200	
			1,200
Food and Lodging Nourriture et hébergement			
Mobilization and Demobilization Mobilisation et démobilisation	Mo'b-Demo'b	2,400	2,400
Sub Total of Indirect Costs Total partiel des coûts indirects			3,600
Amount Allowable (not greater than 20% of Direct Costs) Montant admissible (n'excédant pas 20 % des coûts directs)			3,600
Total Value of Assessment Credit (Total of Direct and Allowable Indirect costs)	Valeur totale du crédit d'évaluation (Total des coûts directs et indirects admissibles)		\$31,100

Note : Le titulaire enregistré sera tenu de vérifier les dépenses demandées dans le présent état des coûts dans les 30 jours suivant une demande à cet effet. Si la vérification n'est pas effectuée, le ministre peut rejeter tout ou une partie des travaux d'évaluation présentés.

Filing Discounts

1. Work filed within two years of completion is claimed at 100% of the above Total Value of Assessment Credit.
2. Work filed three, four or five years after completion is claimed at 50% of the above Total Value of Assessment Credit. See calculations below:

Total Value of Assessment Credit	Total Assessment Claimed
	× 0.50 =

Certification Verifying Statement of Costs

I hereby certify:
that the amounts shown are as accurate as possible and these costs were incurred while conducting assessment work on the lands shown on the accompanying Report of Work form.

that as Recorded Holder (Recorded Holder, Agent, Position in Company) I am authorized

to make this certification

Remises pour dépôt

1. Les travaux déposés dans les deux ans suivant leur achèvement sont remboursés à 100 % de la valeur totale susmentionnée du crédit d'évaluation.
2. Les travaux déposés trois, quatre ou cinq ans après leur achèvement sont remboursés à 50 % de la valeur totale du crédit d'évaluation susmentionné. Voir les calculs ci-dessous.

Valeur totale du crédit d'évaluation	Evaluation totale demandée
	× 0,50 =

Attestation de l'état des coûts

J'atteste par la présente :
que les montants indiqués sont le plus exact possible et que ces dépenses ont été engagées pour effectuer les travaux d'évaluation sur les terrains indiqués dans la formule de rapport de travail ci-joint.

Et qu'à titre de _____ je suis autorisé
(titulaire enregistré, représentant, poste occupé dans la compagnie)

à faire cette attestation.

Dear Sir:

Re: Assessment Work, Claims 1165339, 1165340 and
1179246, Fawcett Township

Enclosed is the Report of Work form and the reports and maps covering a program of line-cutting and geophysics on the above noted claims.

The scale of the enclosed map is 1:10 000 however, as a result of conversations with Clive Stephenson in the Assessment Branch, we are submitting these for consideration. If required they can be replaced by maps at a scale of 1:5 000.

Yours truly,

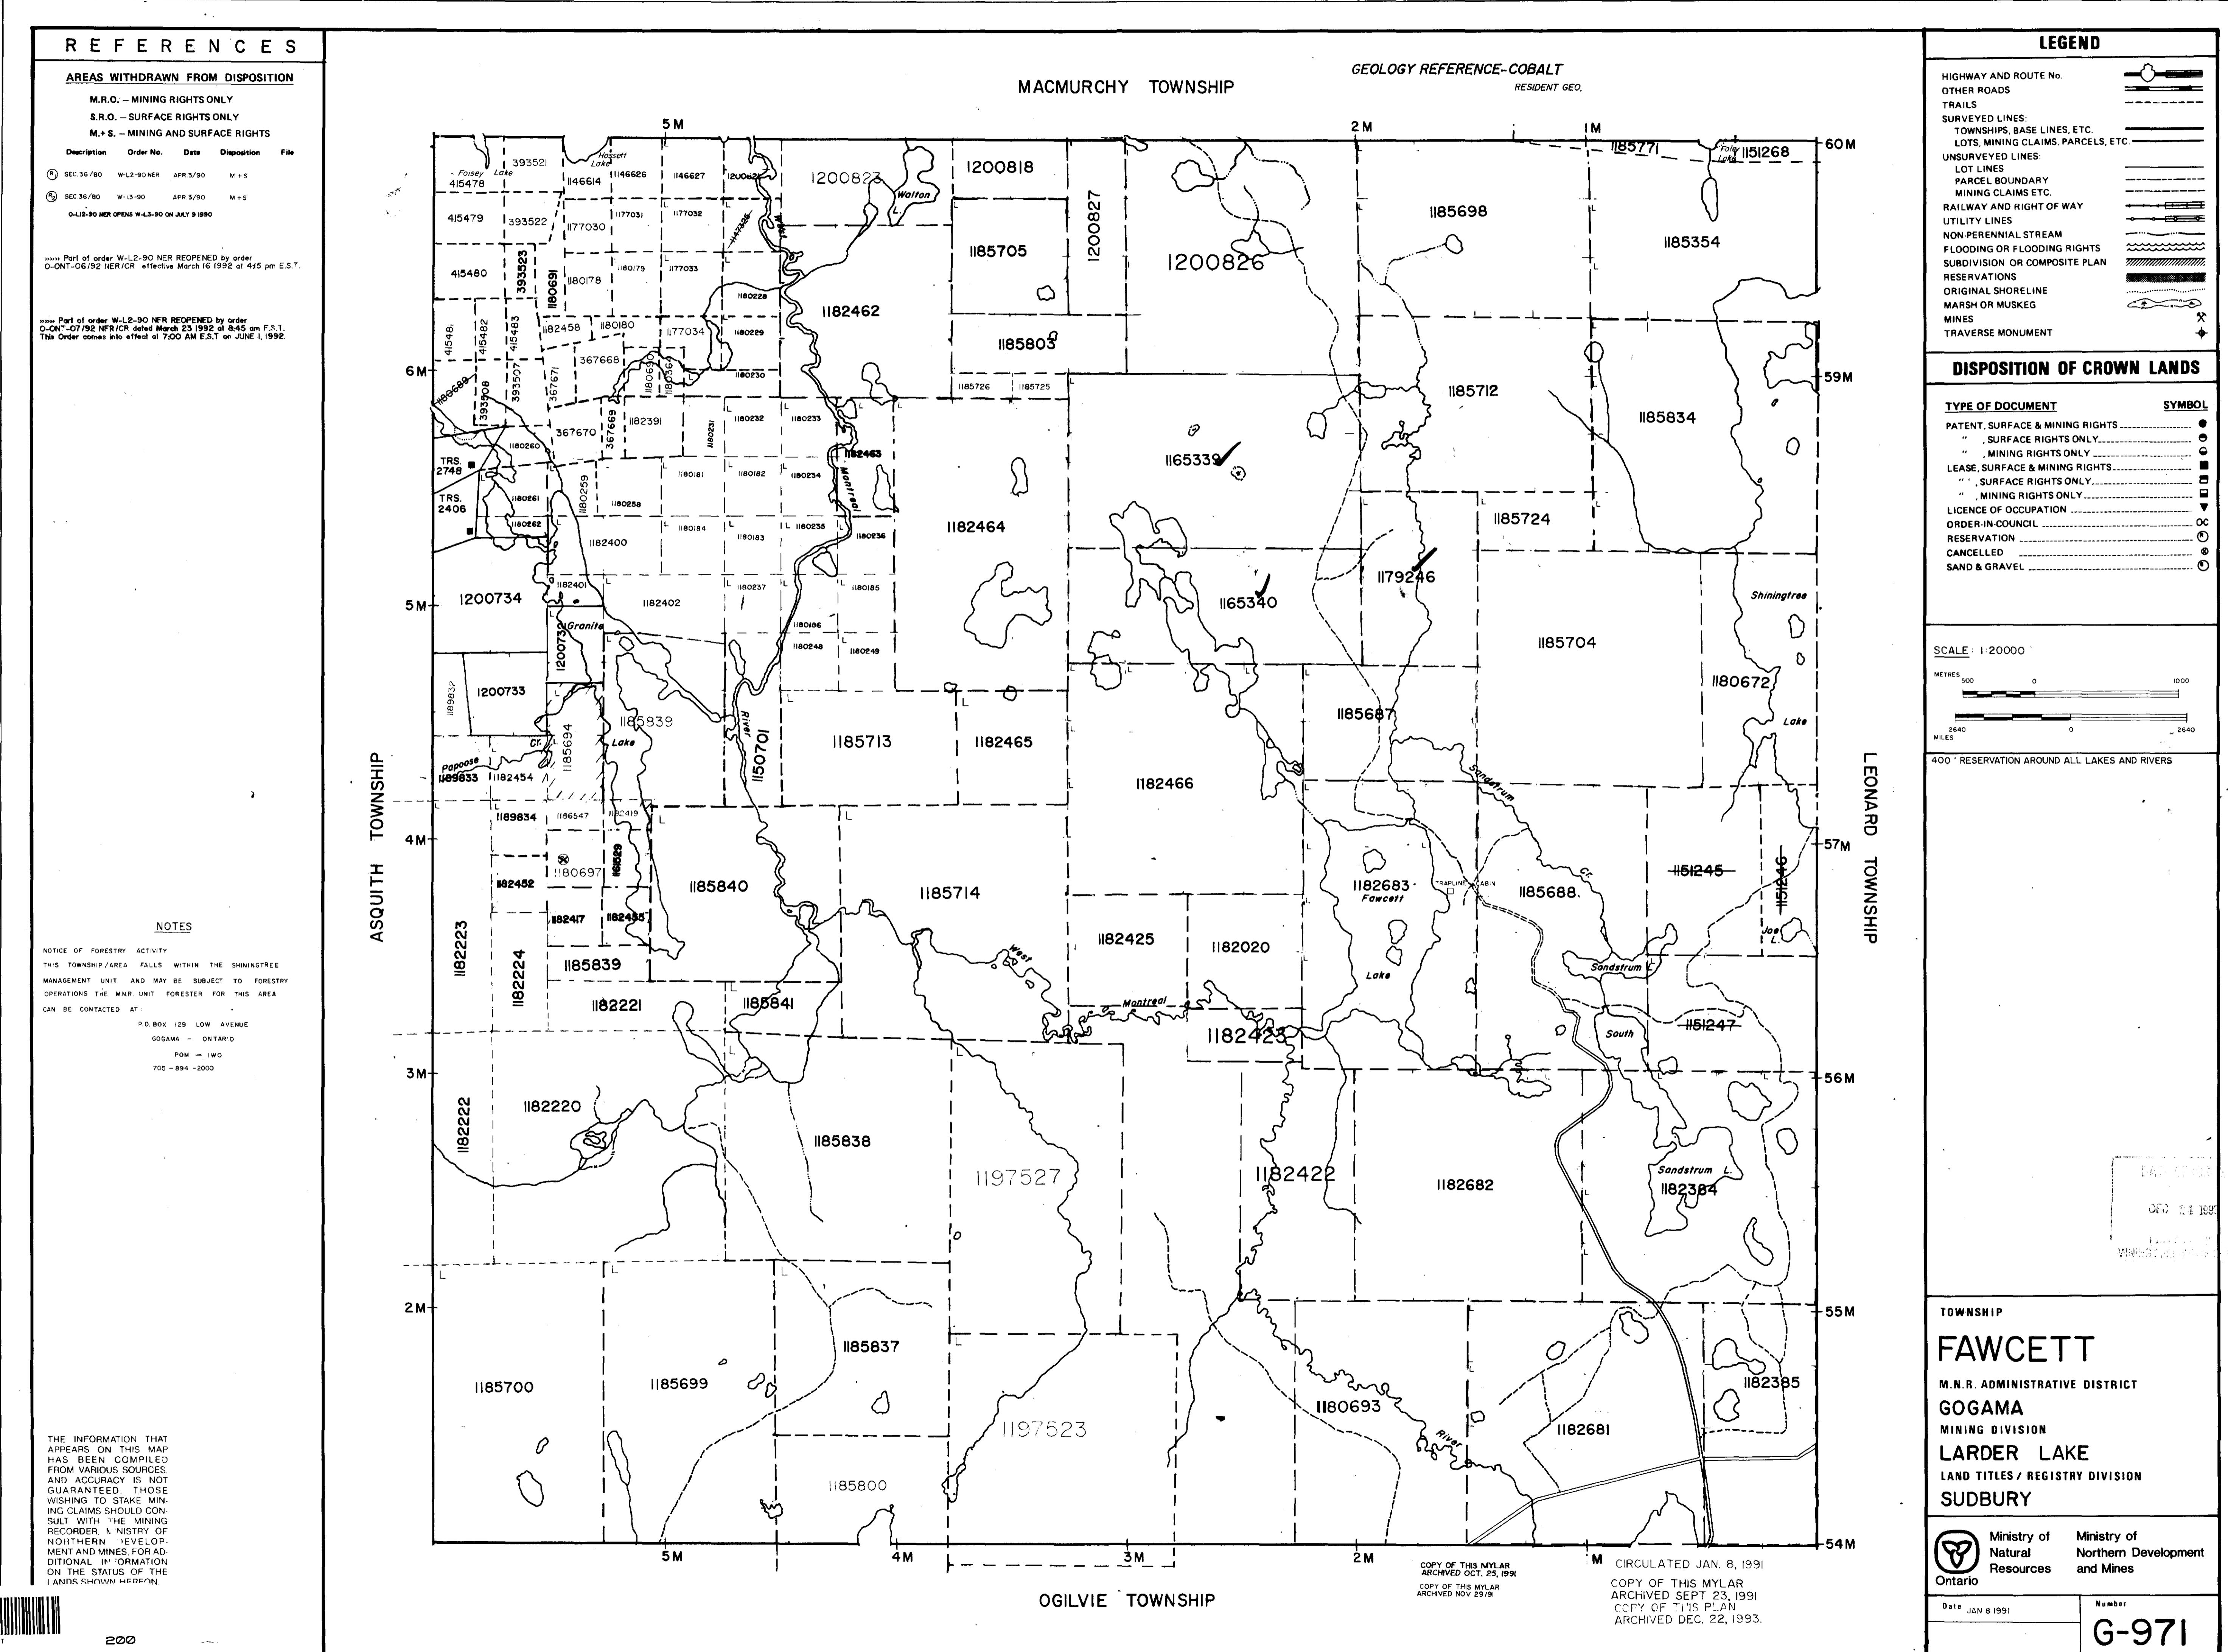

Dan Patrie
