CARRIED OUT ON
CLAIM NO. P1210920
"CHESTER TOWNSHIP"
PORCUPINE MINING DIVISION**

Stripping and trenching fracture zone on claim number P1210920.

Fractures filled with sulphides, pyrite, chalcopyrite. Recommended rock test pitting and small 50 pound muck samples for analyses.

Purpose is to ascertain if the fractured mineralization is sufficient to yield commercial gold and copper values.

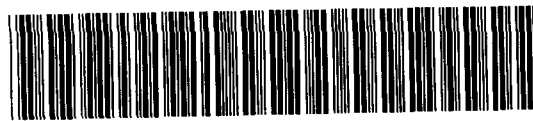

GEOLOGY

Rock sequence in the exposed trenches is a continuous series of granodiorites with a small section of diorite blocks.

Additional work in 1998, which will include stripping, will try to locate the second phase deformation of the diorite.

Extensive geological work in the area (on the Young-Shannon Chester Township claims) has revealed that in place sequences of diorite are close to the blocks. It is in these folded, deformed diorite blocks that the best gold values are found.

GEOLOGY - continued...

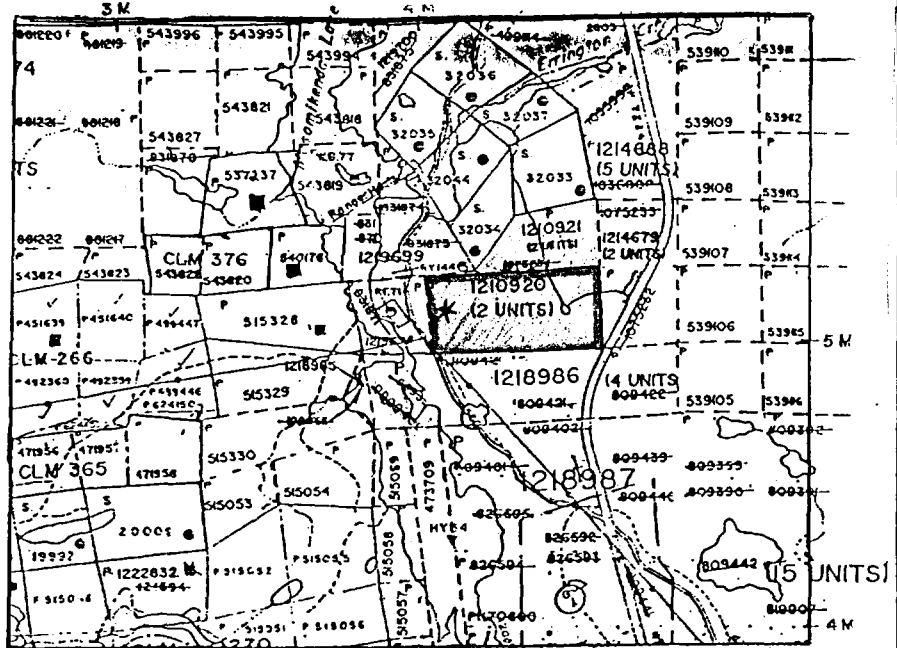

An extensive fracture pattern (fractures of 1/4" to 1/2" filled with quartz and chalcopyrite), was exposed in all trenches.
