MYLAKE MINES LIMITED

Property - 11 patented claims, i.e., L,4125, 6369, 7423, 7424, 7585, 8037, 11779, 13909, 13910, 14811, 14993, in Grenfell Township, Larder Lake Mining Division, about 7 miles northwest of Kirkland Lake.

A gold prospect. At some stage of underground work a sample of extremely high grade gold was encountered but lacked continuity. Apparently most of further work was directed to picking up extension. About 1960 the property was temporarily taken over by William Lord. There is no record of work done at that time.

Work done:

Prior to 1944, a 2-compartment shaft was sunk to a depth of 250 feet. Lateral work confined to about 250 feet on the 125' level.

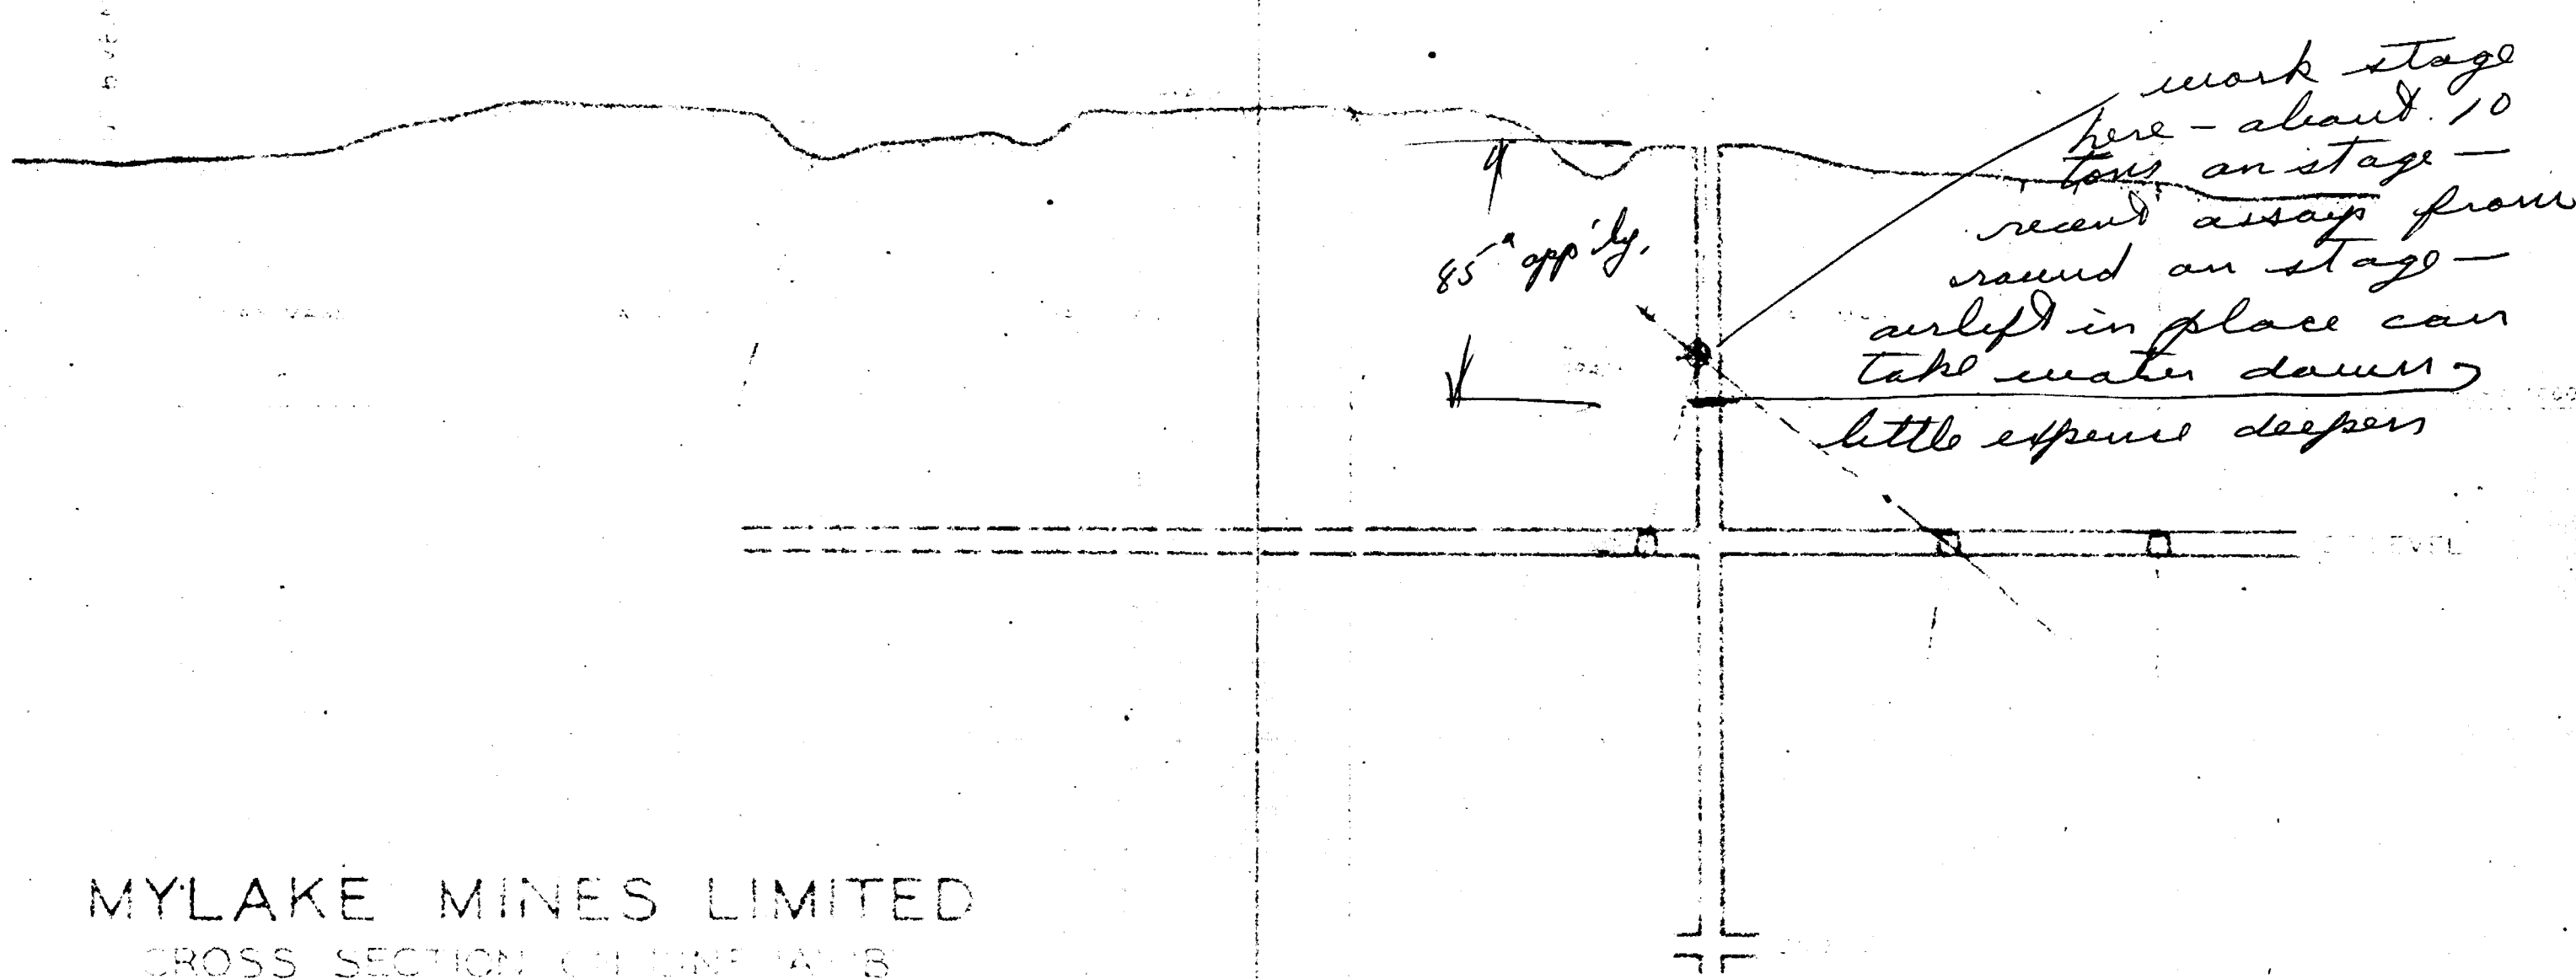

1944 and 1945 - geological mapping and extensive diamond drilling carried out with negative results.

As to value of the property - Considering the amount of intelligent exploration carried out, with negative results, the possibility of finding anything worthwhile in the shaft area would appear to be very remote. The balance of the property has no real merit.

Keith J. Benner.
