INTRODUCTION

Claims 1185611 and 1185612 were staked on behalf of Jocelyne Kidston (50%) and L.Mike Dymont (50%) on Dec 3, 1991.

The claims were staked to gain a land position in the area for exploration. Since that time, six more claims have been added to the property as the claims become available. The property has a good database on nearby contiguous claims. Recent twinning of the TransCanada Pipeline has exposed interesting geology, and numerous airborne surveys (see PREVIOUS WORK) enhance the grassroots exploration possibilities. The property was geologically mapped over a 5 day period from September 9, 1992 to September 13, 1992.

LOCATION AND ACCESS

The property is located 10 miles NW of the town of Kirkland Lake. Access to the property from Kirkland Lake is West on HWY 66 11 miles to Keno-gami, and North on HWY 11 16 miles to White Clay River bridge. The property can then be accessed on foot, East 1/2 mile from the bridge. The property is crossed by the TransCanada Pipeline and comprises the NW1/4 and NE1/4 of the S1/2, Lot 10, Concession V, Maisonville Township.

AREA GEOLOGY

The surrounding area consists of a sequence of tholeiitic pillow basalt flows. The flows generally strike 0 degrees, dipping steeply to the East, and, from pillow facings, tops are to the East.

Cutting the volcanic assemblage is a series of Easterly trending, narrow, medium-grained, pink feldspar-porphyry syenite dykes and associated minor dykelets.

Intruding the above lithologies are North-striking, steeply dipping diabase dykes.

PROPERTY GEOLOGY

The property is underlain by Iron-rich and Iron-poor tholeiitic basalts, easily distinguished by eye and with the use of a magnet.

The tholeiitic basalts are intruded by East-West and North-South striking porphyry syenites.

Two diabase dykes trending N-S cut the coarse grained tholeiitic basalt. In the sampled area #2, a narrow (1 meter) lamprophyre dyke was uncovered.

LITHOLOGIES

The following are more detailed descriptions of the major rock types based on examination of outcrops and hand samples:

(1) Iron-poor tholeiitic basalt

This Magnesium-rich basalt was easily distinguished by its light green to grayish color on both weathered and fresh surfaces. Within this group fine and coarse grained flows were noted along with pillow breccia. Intact pillows were mapped on L0+00 with tops to the East.

RECEIVED

APR 05 1993

MINING LANDS BRANCH

LITHOLOGIES cont'd

(2) Iron-rich tholeiitic basalt

These rocks are dark green to black and magnetic. The rocks contain dark green to black pyroxene and abundant titaniferous magnetite. The surface appears fresh and not weathered to a rusty brown as is the habit of most Iron-rich basalts. The rocks were identifiable both by eye and with the use of a magnet.

(6) Diabase

Matachewan dykes of gabbroic composition and diabasic textures are found to cut both the Iron-rich and Iron-poor tholeiites in a N-S direction. The weathered surfaces are dark gray or rusty brown and are more magnetic than the Iron-rich basalts.

(5b) Porphyry syenite

Numerous small (less than 2 feet) dykes were mapped on the property, the majority of these in the sample #2 area. These dykes tend to intrude in all directions and are pale pink in color and lack mineralization.

RECEIVED

APR 05 1993

MINING LANDS BRANCH

ALTERATION

Alteration was noted in both sample areas. Sample area #1 shows weak and narrow (10 feet) alteration with 1" quartz veining and less than 2 % pyrite.

Sample area #2 shows more prevalent alteration within a small shear zone with brecciation and quartz flooding with up to 30 % mineralization.

Both areas were lamped with an ultra-violet lamp and area #2 showed minor Scheelite and Powellite fluorescence.

LITHOGEOCHEMISTRY

A total of 25 samples were analyzed for Gold by atomic absorption at Swastika Laboratories. Both sampled areas returned anomalous Gold. Maps detailing sampled areas #1 and #2 are contained within this report.

RECEIVED

APR 05 1993

MINING LANDS BRANCH

PREVIOUS WORK

PIPELINE NORTH PROPERTY

A search of the Kirkland Lake assessment files disclosed the following on overlapping and contiguous claims:

ELZINA GML---AFRO 765---PROP RPT---1938
PETERSON, W.-AFRO2260---DDH,RPT----1952
GSC-----Map 20, 150G---AMAG---1975
OGS-----AEM,AMAG---1979
BRONSON MINES-AFRO 284--MAG,VLFEM--1980-81
GOLIATH MINES-AFRO 1019-DDH-----1981
GLEN AUDEN MINES-AFRO 951-AMAG,AEM-1985
NORANDA-----AFRO 2017-----AMAG,AEM-1985

Several trenches and pits were located for which there is no record.

MAPPING PROCEDURE

Mapping was aided by lines that were cut and chained during July. Also, from a previous prospecting report, areas of interest could now be properly located.

From the magnetometer survey done in the latter part of August, several North striking diabase dykes were confirmed and several more dykes were inferred. (see fig 3 geological map).

A hand magnet was used to distinguish the Iron-rich from the Iron-poor tholeiites as well color identification.

RESULTS

The Iron-rich and Iron-poor tholeiitic flow contact was easily determined in the field and from magnetometer results.

An undocumented pit and trench system in the SE corner of claim 1185612 was located, mapped and sampled and yielded anomalous Au values.

From mapping it would appear that the North-South striking diabase dykes follow along the contact of the tholeiitic flows.

CONCLUSION

Mechanical stripping of the undocumented pit and trench system in the SE corner of claim 1185612 is warranted.

CERTIFICATE

I, Leslie Michael Dymont, residing in the township of Marquis, Ontario, and having a mailing address of Joml Minerals and Expediting Ltd., Box 66, Swastika, Ontario, P0K 1T0, do hereby certify:

- (1) That I am a Mining Technician having taken the two year course at Haileybury School of Mines, Haileybury, Ontario.
- (2) That I have been employed in all phases of mining exploration and developement for 32 years.
- (3) That I did personally accumulate and set forth the facts and knowledge in the accompanying report and maps.
- (4) That the accompanying report is true.

Dear Sir:

**RE: APPROVAL OF ASSESSMENT WORK ON MINING CLAIMS L 1185611 ET AL IN
MAISONVILLE TOWNSHIP.**

The Assessment credits for Geology and Assaying, sections 12 and 17 of the Mining Act Regulations, as listed on the original submission, have been approved as of APRIL 5, 1993.

Please indicate this approval on the claim record sheets.

If you have any questions please call Clive Stephenson at (705) 670-5856.

Yours sincerely,

Blair Kite
(Acting) Senior Manager, Mining Lands Branch
Mines and Minerals Division

Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used for correspondence. Questions about this collection should be directed to the Provincial Manager, Mining Lands, Ministry of Northern Development and Mines, Fourth Floor, 159 Cedar Street, Sudbury, Ontario, P3E 6A5, telephone (705) 870-7264.

- Instructions:**
- Please type or print and submit in duplicate.
 - Refer to the Mining Act and Regulations for requirements of filing assessment work or consult the Mining Recorder.
 - A separate copy of this form must be completed for each Work Group.
 - Technical reports and maps must accompany this form in duplicate.
 - A sketch, showing the claims the work is assigned to, must accompany this form.
