STRIKE MINERALS INC. OPTION

MINING LANDS SECTION

BADEN TOWNSHIP PROJECT

MINING LANDS SECTION

The Baden township property consists of 62 unpatented mining claims and 5 leased mining claims (MRO) in the north west corner of Baden township, Larder Lake Mining Division. The property is located 34 miles west of Kirkland Lake and 12 miles NNW of Matachewan at the head of lake Matachewan. The core of the property was staked in 1985 and enlarged in 1987 and 1989 by Strike Minerals Inc. Queenston Mining entered into an agreement with Strike Minerals in 1989 to acquire 70% of the property over a 4 year period.

The property is underlain by northeasterly trending mafic to intermediate volcanics with sub-vertical dip. Those volcanics seen to date are mainly calc-alkaline andesite agglomerates and fragmentals. The volcanics have been intruded by massive medium grained equigranular granite in several areas of the property. Late granitic dykes crosscut the intrusives and Matachewan diabase cut all known lithologies. The Montreal River fault and the Mistinikon fault intersect each other in the central part of the property and appear to occupy the contact between the main granite intrusion on the east and mafic volcanics to the west.

Three known mineral occurrences and one new discovery were explored through an extensive program of mechanized stripping and hydraulic washing by Strike Minerals Inc. in 1988. The three historical showings, the Thesaurus mine, the Adit vein and the

Richore showing are located in granite bodies. The first two occur as vein systems within the eastern granite. The Adit vein showing is a series of quartz veins keyed to tight faults trending at 045/v through the granite. Exposed veins, up to 2 feet in thickness returned values ranging to 0.254 oz/ton from surface chip sampling. Visible gold has been noted in these veins and minor chalcopryrite-pyrite-specularite mineralization is found in fault traces where quartz is absent.

The Thesaurus mine has not been evaluated in detail to date but evidence at surface and from rock in the waste dump suggests that mineralization may be the result of structurally controlled stockwork developed about a strongly altered quartz porphyry dyke. Prominent vein structures, some associated to shearing are oriented between N30E and N61E. Underground exploration of the Thesaurus mine in the 1920's included a 308 foot shaft and 330 feet of lateral exploration on the 100 and 300 foot levels.

No. 1 vein material from the dump is reported to have returned assays in the 0.1 to 0.25 oz/ton range. Grab samples taken by Strike Minerals from the No. 1 vein during stripping returned values as high as 0.545 oz/ton.

The Richore showing occurs in a small granite plug 1.5 miles southwest of the Thesaurus mine. This showing was discovered in 1934 and consists of a strong dextral shear zone which strikes through the granite on a trend of 055/v and forms part of the northern contact between the host agglomerates and the granite. The shear is currently exposed for a length of 600 feet and has

been channel sampled over this distance. Significant gold assays up to 4.75 oz/ton are directly associated with the shear zone and most particularly with pods of quartz flooding and greenish sericite mineralization. The shear itself has a chloritic schist core and a generally anastomosing cleavage which persists into the flanking granites. Specularite, pyrite, sericite and minor quartz veining are also present in the shear zone.

Exploration activity by Queenston and Strike has concentrated on a discovery made by Strike in 1988. The Carbonate zone is located approximately 1700 feet northeast of the Richore. This showing is a broad alteration/deformation zone in andesite agglomerate. Alteration consists of quartz flooding, quartz veining, sulphide mineralization and strong Mg-carbonate alteration. These rocks have been brecciated and strongly foliated during and after alteration. Late faulting which post dates foliation is also present. Gold mineralization is most strongly associated to quartz veining and sulphide stringers within the deformation zone. Channel samples and grab samples returned anomalous to 2.2 oz/ton gold values from this showing. Molybdenite is also present on some quartz vein contacts.

Magnetometer and induced polarization surveys conducted in 1989 extended this zone and delineated a second sub-parallel zone for a composite length of 1200 feet on an azimuth of approximately 072 degree. Four drill holes have tested these zones and intersected strong quartz-carbonate-sericite alteration

over true widths from 60 to 105 feet. High gold assays from these zones are directly associated to strong expressions of shearing or faulting with attendant quartz veining within these zones.

All 4 main showings on this property appear to lie within a corridor less than 1000 feet wide and approximately 2 miles long which trends 050 degrees. Structural features within each are sufficiently compatible to suggest they represent portions of a larger deformation zone.

MINING LANDS SECTION

Re: Report of work (77 (19)) 13 claims  
Baden Township L981585 etc.

Dear Mr. Stolliker

Please find attached a submission of assessment work credits for 13 unpatented mining claims in Baden township, Larder Lake mining division. The claims form part of a contiguous group of 62 unpatented claims. Work submitted for this report includes saw-cut channel sample and diamond drill core assays. All assays for gold were performed at Swastika Labs. Assay certificates, invoices and copies of cancelled cheques for all submitted work has been appended to drill sections and sample plans. The drill and trench location plan also provides an inset claim map for the property. I have enclosed a copy of the expenditure report which was filed with the Mining Recorder as well as a brief description of the property.

An error was made in the Report of Work submitted to the Mining Recorder's office. Total expenditure credit by claim exceeds total credits as per the calculation. Please reduce claim 981589's expenditure application to 19 days.

Should you require any further information please do not hesitate to call.

Sincerely

QUEENSTON MINING INC.
