Notes on the Bedrock Assays
Sewell-Reeves Project
East Block

Attachments include:

: two, 1:10,000 sample maps covering the 426-claim East Block. Samples are designated by an 'x' with appropriate sample number and assay in ppm. The 10,000 scale is used where sample density is least. Drillhole locations are also shown on this plan.

: 3, 1:5000-scale plans in areas where sample density is greater being

- Trench 18 area southwest of Sewell Lake
- the Four Corners East part, and
- the Four Corners West part.

: a, 1:10,000-scale claim map highlighting claims on which samples were taken,

: logs of drillholes from which samples were taken, and,

: 2, photo-reduced claim maps indicating

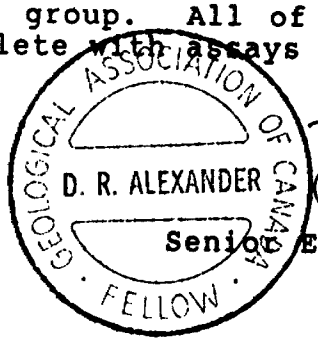
1) the claims on which samples were taken
2) the claims on which the work is being applied.

... along with lists of said claims.

The samples were taken by American Barrick personnel during the course of a geological survey conducted on the 426-claim East Group between May 15 and August 15, 1989. American Barrick Resources Corporation is the optionee of record from Glen Auden Resources and Goldrock Resources.

All assaying was completed at the Holt-McDermott assay lab at a charge of $7.50 per sample -- a representative invoice signed by the Regional Exploration Manager is attached. The charge is all-inclusive of sample preparation and assaying. Since the assay rate is much less than a commercial lab, check samples and assays of additional elements are charged at the same $7.50 per element rate. All samples are assayed for gold in gms (or ppm) with additional elements noted (in ppm) where appropriate.

Also included in the programme are assays from several drillholes stored at the Regional Core Library in Timmins. The holes were drilled by the Kukatush Mining Corporation between 1962 and 1966 and occur within or on the fringes of the current claim group. All of the drillholes were relogged -- copies of the logs, complete with assays are attached.



Dale R. Alexander
Senior Exploration Geologist

Summary of Assay Sheets

May 25/89	-	22
May 30/89	-	57 / 79
May 30/89	-	50 / 129
May 31/89	-	78 / 207
June 13/89	-	101 / 308
June 14/89	-	29 / 337
June 14/89	-	37 / 374
June 19/89	-	5 / 379
June 21/89	-	57 / 436
June 30/89	-	31 / 467
June 30/89	-	92 / 559
July 5/89	-	7 / 566
July 7/89	-	22 / 588
July 8/89	-	32 / 1620
July 10/89	-	16 / 636
July 12/89	-	63 / 699
July 13/89	-	4 / 703
July 18/89	-	62 / 765
July 18/89	-	57 / 822
July 24/89	-	93 / 915
July 25/89	-	24 / 939
July 31/89	-	188 / 1127
July 31/89	-	52 / 1179

1179 x $7.50 = $8842.50 ÷ $15/day = 589.5 days credit

Credits to be fulfilled from Report of Work

= 35 claims x 15 days + 1 claim x 10 days

= 525 + 10 = 535

Please bank excess credits for future use.

ALL DATA AND MATERIALS TO BE RETURNED BY: Oct. 31, 1989.
(maximum of three (3) months)

Assaying Lab: Holt McDermott Ltd.

Results Returned [ ] Release Date:

Samples Returned [ ] Pulps Returned [ ] Rejects Returned [ ]

I HAVE READ AND HEREBY AGREE TO THE ABOVE AND THE TERMS AND CONDITIONS ON THE REVERSE OF THIS AGREEMENT AND UNDERSTAND THAT I AM BOUND BY THOSE TERMS.

X G. Keanell
(Company Representative)

Authorizing Signature of Core Library Personnel: C. Hall Date: 26-07-89

TERMS AND CONDITIONS:

A) ASSAYS AND CHEMISTRY:

(and other destructive tests)

1) The costs of all assays, tests and shipments of samples will be borne by the client.

2) The assays and/or test results will be released to the client and the Core Library at the same time.

3) The assays and/or test results may be kept "Confidential" for up to three (3) months from the time of sampling if the client requests. The results will then be released to the general public.

4) Pulps and rejects must be returned to the Core Library.

B) SECTIONING:

(or other non-destructive tests)

1) The costs of all sections, tests and shipment of samples will be borne by the client.

2) The sections and/or test results will be the property of the Core Library. The sections and/or test results may be kept "Confidential" for up to three (3) months if the client requests. The sections and/or results will then be released to the general public.

3) The sections are to be examined at the Core Library. It is clearly understood that the Core Library will not be responsible for a section description.

4) Cut-offs and remaining samples are to be returned to the Core Library.

NOTE: ALL MATERIALS BORROWED FROM AN ONTARIO DRILL CORE LIBRARY REMAIN THE PROPERTY OF THE ONTARIO MINISTRY OF NORTHERN DEVELOPMENT AND MINES, AS DO ALL RESULTS AND SECTIONS OBTAINED FROM THAT MATERIAL.

0	25	Casing								
25	35.5	Volcanics and	Cherty sediments. In agreement with the 1962 log. This core is divisible into very likely two large blocks of bedrock (+ casing) of similar volcanics and sediments throughout this drill hole. The core is blocky with numerous weathered fragments, many are foreign fragments (granite?)							
35.5	48.0	Volcanics and	Cherty sediments. A continuation of the same unit as from 25 to 35.5' The core is still blocky and weathered, but is probably ledge. The "volcanics" are hard, dk gy and have a faint brown tint. They are very fine grained and weakly foliated at 30 to 40 d to ca They are interlayered with cherty sediments that are thinly layered with pinkish grey cherts and dark green gy, foliated argillite. The rocks are magnetic, having fine stringers and bands of Po, Py and Mt parallel to foliation. Probably an Iron Fm (35.5-37.5): I do not see any evidence of faulting nor of talc and graphite as described in the 1962 log.							
						99608	35.1	40.0	4.9	Ni/Cu/S 0.08
			(35.1-40.0): Test Sample

LOCATION (Tp., Lot, Con. OR Lat. and Long.)

PROPERTY NAME

FOOTAGE FROM	FOOTAGE TO	ROCK TYPE	DESCRIPTION Colour, grain size, texture, minerals, alteration, etc.	PLANAR FEATURE ANGLE *	CORE SPECIMEN FOOTAGE +	YOUR SAMPLE NUMBER	SAMPLE FOOTAGE FROM	SAMPLE FOOTAGE TO	SAMPLE LENGTH	ASSAYS + Au (g)
0	25	Cas								
25	83	Mafic Volcanic	Basaltic (to ultramafic?) Dk gy, vg, very hard, fairly massive unit. Non magnetic Wk foliated at ± 45 d to ca Magnetism varies from moderate to strong t the unit The unit is apparently barren of sulfides The lower "contact" occurs within a zone of bleached, altered material and appears transitional.							
			(60.0 - 65.0): Test sample. Typical "basaltic" material.			99551	60	65	5	0.11
83	87	Bleached TCTZ	Pale gngy. Mottled with relict basaltic patches Non magnetic. No sulfides A pale buff overprinting that is probably a carbonate alteration. However, the unit is very hard			52	83	87	5	0.13
87	131	Ultramafic - Serpentinized	Black, very fine grained, massive. The unit is fairly randomly fractured. Fractures are altered to pale green platy serpentine (antigorite) as well as fibrous crysotile and a white botroidal mineral. 45 d to ca The unit is moderately to strongly magnetic. It is apparently barren of sulfides Despite its extensively serpentinized textures, the unit is very hard and dense. Possibly hornfelsic. (note proximity to the large batholith). The lower contact is gradational							
			(107.0 - 112.0): Test sample Typical ultramafic.			53	107	112	5	0.09

* For features such as foliation, bedding, schistosity, measured from the long axis of the core.

+ Additional credit available. See Assessment Work Regulations.

DRILLING COMPANY		COLLAR ELEVATION	BEARING OF HOLE FROM TRUE NORTH	TOTAL FOOTAGE	DIP OF HOLE AT	LOCATION OF HOLE IN RELATION TO A FIXED POINT ON THE CLAIM	MAP REFERENCE NO.	CLAIM NO.
DATE HOLE STARTED	DATE COMPLETED	DATE LOGGED	LOGGED BY		collar ft ft ft ft		LOCATION (Tp., Lot, Con. OR Lat. and Long.)	
EXPLORATION CO., OWNER OR OPTIONEE		DATE SUBMITTED	SUBMITTED BY (Signature)				PROPERTY NAME	

FOOTAGE FROM	FOOTAGE TO	ROCK TYPE	DESCRIPTION Colour, grain size, texture, minerals, alteration, etc.	PLANAR FEATURE ANGLE *	CORE SPECIMEN FOOTAGE +	YOUR SAMPLE NUMBER	SAMPLE FOOTAGE FROM	SAMPLE FOOTAGE TO	SAMPLE LENGTH	ASSAYS + Au (g)
131	167.4	Mafic Volcanic	Same as 25.0' - 83.0' The gradational contacts suggest these altered units are differentiates of the ultramafic This units lower contact is sharp at ± 45d to ca							
			(162.4 - 167.4): Upper contact with granodiorite. Baked margin Tr. Py			99554	162.4	167.4	5	0.10
167.4	177.8	Granodiorite	DK grey fine, hard, massive, 5-10% [illegible] aphanitic fragments [illegible] foliation at ± 45d to ca. They are supported in a matrix of fine grains and biotite The unit is moderately magnetic throughout 2-3% Fine blebby and disseminated Py is dtd The lower contact is sharp along foliation The wallrock to this intrusive has been baked over 6 to 8 inches			99555 56	167.4 [illegible]	[illegible] [illegible]	5 5.4	0.14 0.05
177.8	200.0	Mafic Volcanic	Same as 131.0 - 167.4' Note a few scattered "eyes" at the end of the hole (amygdules). The eyes vary 1/4 to 1/2" long. They are filled with a dense chl aggregate and rimed with biotite.			57	177.8	183	5.8	0.06
			(177.8 - 183.0): Lower contact with Granodiorite. Baked margin. Tr. Py							
200.0		EOH.								
			Comments. Although the mafic units have been logged as "volcanics", they appear to be a differentiate of the ultramafic. The massive, featureless aspect of the entire package suggests an intrusive origin. The hardness and very fine density of the package would suggest it is hornfelsic							

* For features such as foliation, bedding, schistosity, measured from the long axis of the core.

GEOCHEMICAL SURVEY – PROCEDURE RECORD

Numbers of claims from which samples taken - samples from 169 claims (list attached) along with drillhole samples from the Regional Core Library Timmins (logs included).

Total Number of Samples 1179

Type of Sample Bedrock
(Nature of Material)

Average Sample Weight 1 to 2 kgs

Method of Collection from selected bedrock exposure

Soil Horizon Sampled n/a

Horizon Development

Sample Depth

Terrain

Drainage Development

Estimated Range of Overburden Thickness 0 to 30m

SAMPLE PREPARATION
(Includes drying, screening, crushing, ashing)

Mesh size of fraction used for analysis -200 mesh

General The sample is dried, crushed (jaw crusher and cone crusher) and is eventually pulverized (disc pulverizer) to -200 mesh.

ANALYTICAL METHODS

Values expressed in: per cent ☐ p. p. m. ☒ p. p. b. ☐

Cu, Pb, Zn, Ni, Co, Ag, Mo, As,-(circle)

Others Au, with Cu, Zn, Ni locally

Field Analysis (_____ tests)

Extraction Method

Analytical Method

Reagents Used

Field Laboratory Analysis

No. (_____ tests)

Extraction Method

Analytical Method

Reagents Used

Commercial Laboratory (1179 tests)

Name of Laboratory Holt McDermott

Extraction Method Aqua regia

Analytical Method fire and AA

Reagents Used flux, $AgNO_3$, HNO_3, HCl.

General The sample is fluxed and fused to produce a gold bead which is subsequently dissolved and read with AA.

Dear Sir:

Re: Data for Expenditure submitted under Section 77(19) of the Mining Act. R.S.O. 1980 on Mining Claims P 878419 et al in Townships of Sewell, Penhorwood, Reeves and Kenogaming.

The enclosed statement of assessment work credits for Assaying has been approved as of the above date.

Please inform the recorded holder of these mining claims and so indicate on your records.

Yours sincerely,

W. R. Cowan
Provincial Manager, Mining Lands
Mines & Minerals Division

Technical Assessment Work Credits

File 2.12782

Date January 30, 1990

Mining Recorder's Report of Work No. W8906-369

Recorded Holder: AMERICAN BARRICK RESOURCES CORP.

Township or Area: SEWELL, REEVES, PENHORWOOD, KENOGAMING

Type of survey and number of Assessment days credit per claim	Mining Claims Assessed
Geophysical	$8842.50 spent on overburden drilling and assaying samples taken from mining claims:
Electromagnetic _____ days	
Magnetometer _____ days	
Radiometric _____ days	See attached sheet
Induced polarization _____ days	
Other _____ days	
Section 77 (19) See "Mining Claims Assessed" column	
Geological _____ days	
Geochemical _____ days	
Man days ☐ Airborne ☐	
Special provision ☐ Ground ☐	
☐ Credits have been reduced because of partial coverage of claims.	Days credit allowed which may be grouped in accordance with Section 76(6) of the Mining Act R.S.O. 1980.
☐ Credits have been reduced because of corrections to work dates and figures of applicant.	

Special credits under section 77 (16) for the following mining claims

No credits have been allowed for the following mining claims

☐ not sufficiently covered by the survey ☐ insufficient technical data filed

The Mining Recorder may reduce the above credits if necessary in order that the total number of approved assessment days recorded on each claim does not exceed the maximum allowed as follows: Geophysical - 80; Geological - 40; Geochemical - 40; Section 77(19) - 60.
