KENOGAMING TOWNSHIP

FOR

FALCONBRIDGE LIMITED

NTS: 42-A/4 PROJ #: 8191

SEPTEMBER 1990

D. LONDRY
TIMMINS GEOPHYSICS LTD.

SUMMARY AND RECOMMENDATIONS

Magnetic and HLEM surveys were carried out in June 1990, over 29 claims in Kenogaming Township.

The magnetic survey mapped west-northwest trending ultramafic bodies. There are no conductive zones, within 70 metres of the surface, which are detected by the lower EM frequency. Weak quadrature anomalies in the 1777 Hz results reflect poor conductors which may be related to mineralized shear zones. Previous I.P. surveys responded to sulphides in the shear zones and magnetite within the ultramafics.

It is recommended that zones 'A' and 'B' are detailed with a higher frequency HLEM survey.

LIST OF MAPS

INTRODUCTION

During June 1990, magnetic and horizontal loop electromagnetic (HLEM) surveys were carried out for Falconbridge Limited over 29 claims in Kenogaming Township.

The property is located in the north central part of the township, 55 kilometres southwest of the city of Timmins (Figure 1). The claims are numbered as follows:

P 1127395 - P 1127398 inclusive

P 1127631 - P 1127655 inclusive

The property can be accessed from an all weather gravel road which turns south from Highway 101, sixteen kilometres west of the Opishing River.

The field data was collected by J. DerWeduwen, L. Varin and B. Pigeon.

PREVIOUS WORK

A number of companies have carried out previous work on all or part of the Falconbridge property (Table 1). The area has been explored for iron in iron formation, gold in shear zones, and asbestos and nickel in sill-like ultrabasic intrusives.

In 1984 and 1985 Golden Range Resources Inc. carried out an exploration program over 43 claims which covered all of the Falconbridge property. The program consisted of geological mapping, soil sampling, stripping and magnetic, induced polarization (I.P.) and HLEM surveys.

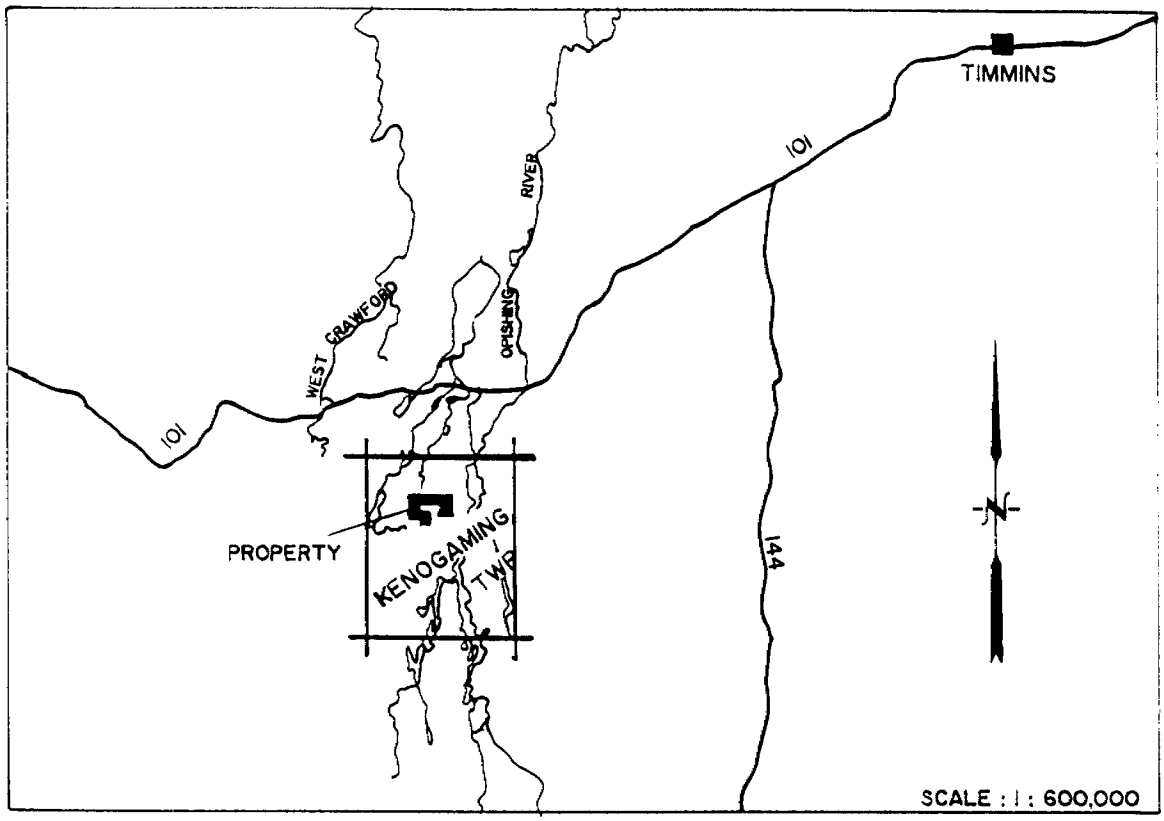

Figure 1 (a). Location Map

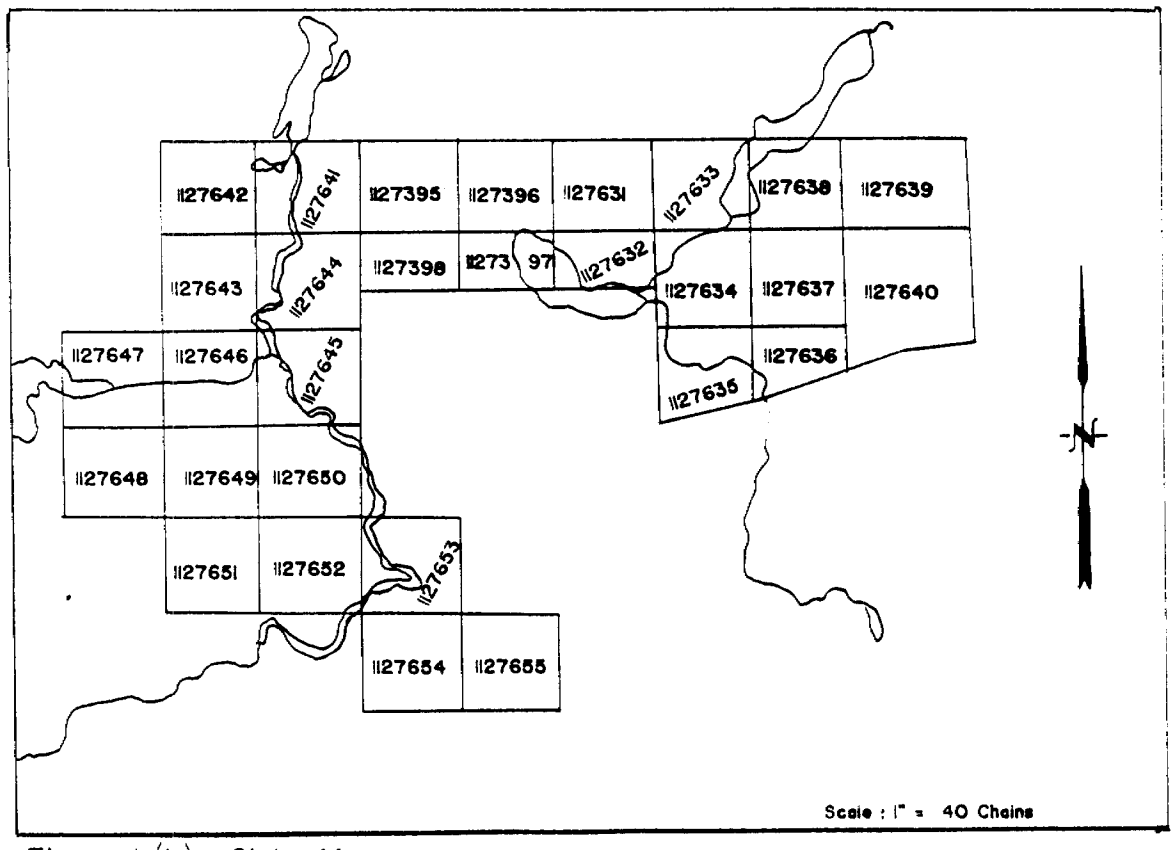

Figure 1 (b). Claim Map

No bedrock conductors were detected in the EM survey. Anomalous IP readings reflected a mineralized shear zone and magnetite in ultramafics.

1947-1954	DUNVEGAN MINES LTD.		#1-#16 N1-N25	T-527

Table 1. Summary of Previous Work

In 1983, Dighem flew VLF-EM and magnetic surveys for R.J. Sheppard over parts of Reeves, Sewell, Penhorwood and Kenogaming Townships. There were only weak, isolated EM anomalies outlined on the Falconbridge property.

In 1979, Utah Mines Limited ran a magnetic survey over 22 claims which surrounded Chabot Lake.

In 1974, Amoco Canada Petroleum Co. Ltd. staked 41 claims between Chabot Lake and Hanrahan Lake. A magnetic survey was carried out and anomalous areas were correlated to ultrabasic intrusives lying conformable to felsic

metavolcanics.

In 1965, Jade Oil and Gas Co. Inc. carried out magnetic and vertical loop electromagnetic (VLEM) surveys on 50 claims which included the present property west of Crawford River.

In 1964, Delmico Mines Limited ran a magnetic survey over 15 claims located to the north and east of Napier Lake.

In 1947, a large claim group, which includes all of the 29 claims covered in this report, was held by Dunvegan Mines Ltd. A geology survey, which included some trenching, was filed in 1947. A second geology survey was carried out in 1951. Sixteen holes were drilled in 1952, and 25 were drilled in 1954. These holes were drilled to locate possible nickel ore in ultrabasic intrusives.

SURVEY DESCRIPTIONS

The grid on the property consists of north-south lines spaced every 100 metres and picketed every 20 metres.

The horizontal loop EM survey was carried out with the Apex Parametrics MaxMin I. This instrument measures the in-phase and quadrature components of the secondary field as a percentage of the primary field. Readings were taken every 20 metres using a coil separation of 120 metres and frequencies of 444 and 1777 Hertz.

The magnetic readings were taken with a Scintrex IGS-2/MP-4. This instrument is a proton precession magnetometer which measures the earth's total magnetic field to an accuracy of 0.1 gammas. Diurnal variations were monitored every 12 seconds with a Scintrex MP-3 base station magnetometer.

MAGNETIC RESULTS

The magnetic results are presented on Map 3 at a scale of 1:5000.

Linear magnetic anomalies, up to 7000 gammas above background, strike east-west to west-northwest. These have been interpreted by previous authors, to reflect magnetite within sill-like ultramafic bodies.

North-south striking Proterozoic diabase dikes are known to be present on the property; however, the magnetic susceptibility of these bodies is much less than the ultramafics and not well mapped by the magnetic data.

HLEM RESULTS

The results of the HLEM survey are presented on maps 1 and 2 at a scale of 1:5000. The profile scale is 1 cm = 20% (444 Hz) and 1 cm = 40% (1777 Hz).

The survey failed to detect a good conductor on the property. Two anomalies labelled 'A' and 'B' on the maps, are weak quadrature responses in the high frequency results; the source of these anomalies have a very poor conductivity. They are located within an area of high magnetic susceptibility in the southwest portion of the property.

The survey also responded to magnetite in the ultramafics. These weak anomalies consist of an inversion in the in-phase component. This inversion is most pronounced when the receiver or transmitter is directly over the zone; a good example of this type of anomaly is located between Lines 2000 and 2200 East at 140 North. There are similar responses over the magnetite bodies in the southwest portion of the property, however, because of the number of them, they

are difficult to interpret in the EM results.

TIMMINS GEOPHYSICS LTD.

SUMMARY AND RECOMMENDATIONS

Magnetic and HLEM surveys were carried out in February 1991, over ice covered areas of the Kenogaming Property. This survey appends the original survey carried out in June 1990.

The HLEM survey did not detect any anomalies, and the magnetic survey extended the trends already outlines in the 1990 survey.

TABLE OF CONTENTS

LIST OF FIGURES

LIST OF MAPS

INTRODUCTION

During February 1991, magnetic and horizontal loop electromagnetic (HLEM) surveys were carried out for Falconbridge Limited over ice covered areas of a group of claims in Kenogaming Township.

The property is located in the north central part of the township, 55 kilometres southwest of the city of Timmins (Figure 1). Twenty nine of the claims are unpatented and numbered as follows:

P 1127395 - P 1127398 inclusive

P 1127631 - P 1127655 inclusive

The property can be accessed from an all weather gravel road which turns south from Highway 101, sixteen kilometres west of the Opishing River.

The field data was collected by J. DerWeduwen, L. Varin and B. Pigeon.

SURVEY DESCRIPTIONS

The grid on the property consists of north-south lines spaced every 100 metres and picketed every 20 metres.

The horizontal loop EM survey was carried out with the Apex Parametrics MaxMin I. This instrument measures the in-phase and quadrature components of the secondary field as a percentage of the primary field. Readings were taken every 20 metres using a coil separation of 120 metres and frequencies of 444

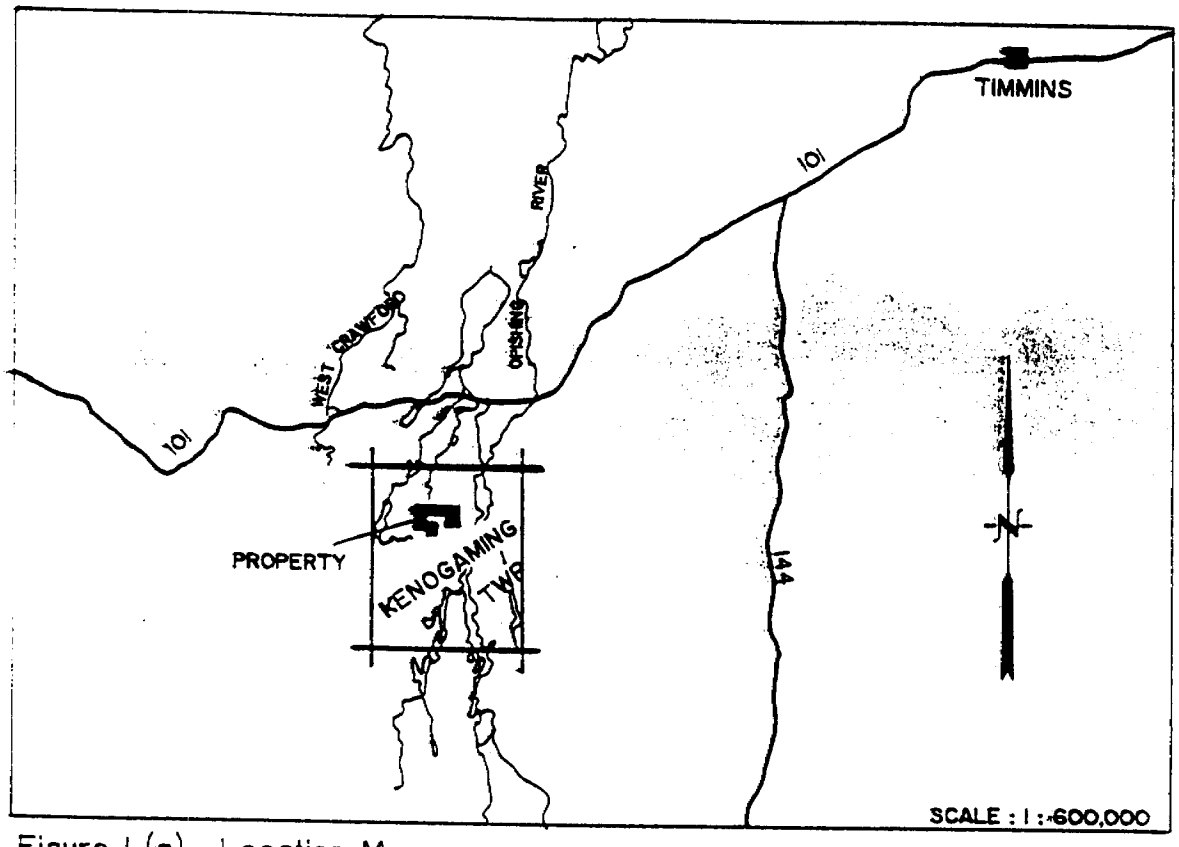

Figure 1 (a). Location Map

and 1777 Hertz.

The magnetic readings were taken with a Scintrex IGS-2/MP-4. This instrument is a proton precession magnetometer which measures the earth's total magnetic field to an accuracy of 0.1 gammas. Diurnal variations were monitored every 12 seconds with a Scintrex MP-3 base station magnetometer.

HLEM RESULTS

The results of the HLEM survey are presented on maps 1 and 2 at a scale of 1:5000. The profile scale is 1 cm = 20% (444 Hz) and 1 cm = 40% (1777 Hz).

No anomalies were outlined in the new survey results.

MAGNETIC RESULTS

The magnetic results are presented on Map 3 at a scale of 1:5000.

The magnetic results extended the patterns already established in the 1990 survey.

GEOPHYSICAL TECHNICAL DATA

GROUND SURVEYS – If more than one survey, specify data for each type of survey

Number of Stations 1087 Number of Readings MAG - 1087 HLEM - 994

Station interval 20 m Line spacing 100 m

Profile scale 1cm = 20 % (444 Hz) - 1 cm = 40$ (1777 hz)

Contour interval 250 gammas

MAGNETIC

Instrument Scintrex IGS-2/MP-4

Accuracy – Scale constant ± .1 gammas

Diurnal correction method Scintrex MP-3 Base Station Magnetometer

Base Station check-in interval (hours) 12 seconds

Base Station location and value 100 West - 400 North

58446

ELECTROMAGNETIC

Instrument Apex Parametrics MaxMin I

Coil configuration Horizontal Loop

Coil separation 120 m

Accuracy 1%

Method: ☐ Fixed transmitter ☐ Shoot back ☒ In line ☐ Parallel line

Frequency 444 Hz - 1777 Hz

(specify V.L.F. station)

Parameters measured In-phase and quadrature components of secondary field measured as percent of primary field.

GRAVITY

Instrument

Scale constant

Dear Madam/Sir:

RE: Notice of Intent dated October 1, 1990 for Geophysical (Electromagnetic & Magnetometer) Survey submitted on Mining Claims P 1127395 et al in Kenogaming Twp.

The assessment work credits, as listed with the above mentioned Notice of Intent have been approved as of the above date.

Please inform the recorded holder of these mining claims and so indicate on your records.

Yours sincerely

R.C. Gashinski

Technical Assessment Work Credits

File: 2.13542

Date: Oct. 1/90

Mining Recorder's Report of Work No.: W9006.60446

Recorded Holder: Falconbridge Limited

Township or Area: Kenogaming Twp.

Type of survey and number of Assessment days credit per claim	Mining Claims Assessed
Geophysical	P 1127395 - 398 incl.
Electromagnetic 18 days	1127631 - 655 incl.
Magnetometer 36.5 days	
Radiometric ____ days	
Induced polarization ____ days	
Other ____ days	
Section 77 (19) See "Mining Claims Assessed" column	
Geological ____ days	
Geochemical ____ days	
Man days ☐ Airborne ☐	
Special provision ☒ Ground ☒	
☒ Credits have been reduced because of partial coverage of claims.	
☐ Credits have been reduced because of corrections to work dates and figures of applicant.	

Special credits under section 77 (16) for the following mining claims

No credits have been allowed for the following mining claims

☐ not sufficiently covered by the survey ☐ insufficient technical data filed

The Mining Recorder may reduce the above credits if necessary in order that the total number of approved assessment days recorded on each claim does not exceed the maximum allowed as follows: Geophysical - 80; Geologocal - 40; Geochemical - 40; Section 77(19) - 60.
