Preliminary Report On
BASAL TILL SAMPLING PROGRAM
BRISTOL-GODFREY TOWNSHIPS PROPERTY
Porcupine Mining Division
District of Cochrane, Ontario
for
TAGALDER RESOURCES INC.

Introduction :

During the period Nov. 1st - Dec. 8th, 1981 a total of 152 percussion type holes were drilled on the subject 22-Claim Property. Each hole penetrated through the glacial-derived overburden cover to bedrock and a sample of the basal till at the overburden-bedrock interface was obtained. The mineralogical examination (both megascopic and microscopic) and geochemical analysis of "basal till" from retreat glaciers -- in particular detailed examination of the heavy mineral content of the basal till -- has been proven to be an effective aid to mineral exploration in areas of Continental Glaciation; that is, in areas now covered by a mantle of glaciolacustrine deposits such as found in most parts of Bristol and Godfrey Townships.

The purpose of the overburden drilling & sampling program conducted on the Tagalder Property was an exploratory search for possibly contained gold deposits.

The scope of this preliminary report will be confined primarily to a description of the sampling technique employed and the location of the aforementioned overburden drill holes as per the Ontario Ministry of Natural Resources requirements for the filing of "Mechanical Work" for Assessment Work Credits.

Verification of the number of holes drilled their location & depth has been attested to by John P. Larche as agent for Tagalder Resources.

Property Description :

The property described in this report consists of 22 contiguous, unpatented, 40-acre mining claims located in Bristol & Godfrey Townships, Porcupine Mining Division, District of Cochrane, Ontario and are further described as follows : ---

<u>Township :</u>	<u>Claim Nos.:</u>	<u>No. of Claims:</u>
Bristol	508700-03 inclusive	4
	516144-51 "	8
	522048	1
	522253-55 "	3
Godfrey	508518-23 inclusive	6
		<u>22 claims</u>

Ownership of the aforementioned 22 mining claims has been attested to by the management, Tagalder Resources Inc. and was not independently ascertained by the writer.

Location & Access :

The Tagalder Resources Property is located in the extreme north-western part of Bristol Township & the southwestern part of adjacent Godfrey Township at Longitude 81° 40' W / Latitude 48° 27' N, or approximately 11 airmiles west of the city centre of Timmins, Ontario.

Access to the general area encompassing the Property can be gained via secondary bush roads that extend southward from Highway 576 and/or northward from Highway 101.

Topography & Drainage :

The Property is situated within an area of relatively flat terrain consisting of low drift-covered hills and rock outcrop that rise 40 to 60 ft. above the local drainage with abundant flat, swampy areas between.

The Property encompasses Godfrey Lake on the northern claims and part of McDonell Lake on the south.

Previous Work :

Exploration programs were previously conducted over the area encompassing the subject property by Hollinger Mines (1969 & 70) and Cominco Limited (1979). These exploration programs consisted of Geological Mapping & Geophysical Surveys (Horizontal Loop Electromagnetic & Magnetometer). The H.E.M. Survey did not locate any significant conductors. The Magnetometer Survey located a number of northerly-trending magnetic features that were considered to represent narrow Diabase Dikes.

Regional Geology :

Godfrey Township and the northern part of Bristol Township are underlain primarily by a thick succession of felsic volcanic rocks comprised essentially of Rhyolite, Pyroclastic Breccias, Lapilli Tuffs & Crystal Tuffs. South of Godfrey Lake the volcanic sequence is intruded by a stock of fine-grained Dacitic to Andesitic Quartz-Feldspar Porphyry. Matachewan-type Diabase Dikes, striking north-northwest, cut all the other rock types.

Gold mineralization occurs in the general vicinity both west & south of the Tagalder Property.

Basal Till Sampling Program :

A total of 152 samples of basal till were obtained on the Tagalder Claim Group. Said samples were obtained by driving a sample tube through the overburden to bedrock by means of a percussion hammer (wacker), and then retrieval of the sample tube containing the basal till sample by means of an hydraulic jack. A more complete description of the equipment used & techniques employed in collecting said samples is given in the accompanying brochure supplied by Roland Collins Overburden Drilling.

The location of the overburden drill holes and the length of each hole (depth to bedrock) is given on the accompanying Drill Hole Location Plan (Map Pocket).

Respectfully submitted,

K.H. Darke

(705) 264-8330

OVERBURDEN DRILLING

BASAL TILL SAMPLING

Equipment

Wacker, gasoline powered machine with a percussion rate of 1300 per minute, weight 38 kg.

Rods and samplers are 35 mm diameter

Rods are one metre long, samplers are 2/3 metre.

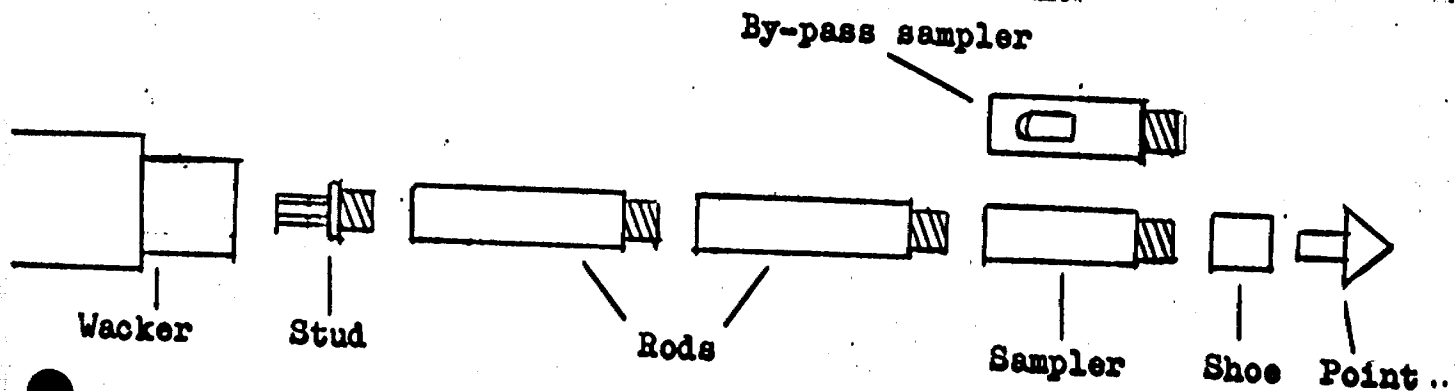

Jack, capable of over five ton lift.

Procedure

The point, shoe, and sampler are driven into the overburden by the Wacker, (the point protects the shoe and keeps the sampler closed), the rods are added until bedrock is reached. Then the rods are jacked up one metre, the point stays at bedrock.

Now with the sampler open, the rods are driven down to bedrock to obtain the sample, then the rods are jacked up and the sample is put directly in the sample bag.

When overburden conditions are right we use a by-pass sampler which needs no point.

Letter dated July 5, 1982, to Ken Darke

Dear Sir:

As per your request for signed receipts in the letter of the above date. I am enclosing a financial summary listing all costs involved and acknowledgement by Mr. Roland Collins on the bottom of these showing payment having been received in full on January 15, 1982.

This was work done for Tagalder Resources Inc. in Bristol and Godfrey Twps. and for Barnet Resources Inc. in Barnet Twp. being Overburden Drilling.

Yours truly

Dear Mr. Leleiver,

The Overburden Drilling contract has been completed on the north group of claims in Bristol & Godfrey twps. One hundred and fifty two holes were drilled for a total of 2974 feet.

2974 feet @ \$3.25 per foot	=	\$9666.50
Two extra men were added to drill crew to clean trail and carry equipment from hole to hole.		
34 man days @ \$110.00 per day	=	3740.00
Points left in hole 10 @ \$12.00 each	=	120.00
Transportation Argo: 12 days @ 30.00 per day	=	360.00
Skidoo: 5 days @ \$20.00 per day	=	100.00
Truck: 800 miles @ .40¢	=	320.00
Total	=	\$14306.50
Less interim payment Dec. 7/81	=	8000.00
		<hr/>
Balance	=	\$6306.50

Yours truly,

Roland Collins

Received full payment of this invoice on January 15/82
