0.0	38.0	Overburden Casing, overburden, boulders.					
38.0	51.0	(2a, wser, cal, fol) **Mafic Flows** Fine grained, medium green with local pale green possibly sericitized and carbonatized calcite bands. Unit is moderately foliated. Limonite stained on fractures.					
51.0	54.3	(1d, fol) **Porphyritic Dyke** Medium grained, grey with pheoncrysts of feldspar to 2mm. Unit is well foliated. Minor pyrite as cubes to 4mm.					
54.3	74.1	(2b, m ser, cal, ank, py) **Mafic Flows** Fine grained, light grey with slight greenish undercast. Unit is well foliated with weak to locally moderate sericite. Pervasively carbonatized with calcite possible ankerite locally. Quartz veins are small white "bullish" in nature 80 degrees to core axis. Lower section of unit maybe pillowed with selvages marked by pale grey zones with "feldspar" phenocrysts. Sulfides are pyrite and minor pyrrhotite as infrequent fine veinlets. Whole rock 3401 at 169.5 meters. Foliation 80 degrees to core axis.					
74.1	77.5	(7d, fol) **Felsic Intrusive** Medium grained, medium grey well foliated. Quartz phenocrysts are small 1mm in general increasing to 1-2mm at lower contact. Fine disseminated pyrite <1%.	11501	76.00	77.50	1.50	0.02
77.5	84.4	(2b, chl, py, po, sph, cpy, cal) **Mafic Flows** Fine grained, medium to dark green, moderately foliated, well mineralized. Unit contains 5-15% sulfides as pyrite, pyrrhotite, sphalerite and chalcopyrite in decreasing order. Pyrite is generally disseminated, fine cubes to local veinlets,	11502	77.50	78.50	1.00	0.02
			11503	78.50	80.00	1.50	0.02

			11506	83.00	84.40	1.40	0.02

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	ASSAYS TO	WIDTH	Au g/t
		pyrrhotite as fine veinlets, sphalerite as fine infrequent veinlets and chalcopyrite as small blotches. Unit is chloritized and has possible chloritic pillow selvages. Calcite occurs as veins small <5% quartz as dark veins with tourmaline (black)?? Whole rock 78.6-8% sulfides.					
84.4	87.2	(7d, fol) **Felsic Intrusive** Medium grained, dark grey highly foliated 78 degrees to core axis. Weakly mineralized with fine disseminations of pyrite.	11507 11508	84.40 86.00	86.00 87.20	1.60 1.20	0.07 0.02
87.2	193.8	(2b?, cal, m ser, po, py) **Mafic Flows** Fine grained, medium green with local pale weak to moderate sericite, pervasive calcite carbonatization. Selvages are marked by chlorite with weak mineralization. Veins of pyrrhotite to 2cm in width occur from 87.2 to 110.2 meters, with minor chalcopyrite, these veins occur at 2-5 meter intervals 80 degrees to core axis. Flows are still well foliated at 78 degrees to core axis. Pyrite is disseminated throughout with minor veinlets in foliation's. Sphalerite is infrequent as small veinlets-very infrequent. Small felsic dyke from 118.0-119.0 meters, feldspar. Whole rock 117M. The foliation and sericite carbonate alteration has created what could be classed as laminations in a greywacke to argillite sediment. The pyrite "beds" are probably primary but could have been introduced with the alteration. Although it is felt that the porphyritic sections are felsic intrusives highly foliated and sericitized, they could also be coarser grained greywacke beds as at 120.8-123.0, 128.5-130.6. 147.5-150.4: Numerous pyrite veinlets or layers 0.2cm to 0.5cm in foliation at 82 degrees to core axis. Pyrite 3-5%. 166.8-172.0: Pyrite zone as above 2-3% pyrite. 179.1-183.1: Felsic as above well foliated and carbonatized grey with quartz pheno's. 184.3-193.8- **Pyritic Horizon** Fine grained, weakly sericitized highly foliated with pyrite as disseminations and veinlets of fine/coarse grains to 2cm wide. Lower contact is at 45 degrees to core axis and	11509 11510 11511 11512 11513 11514 11515 11516 11517 11518 11519 11520 11521 11522	87.20 147.50 149.00 166.80 168.00 169.00 170.50 184.30 185.30 186.50 188.00 189.50 191.00 192.50	88.60 149.00 150.40 168.00 169.00 170.50 172.00 185.30 186.50 188.00 189.50 191.00 192.50 193.80	1.40 1.50 1.40 1.20 1.00 1.50 1.50 1.00 1.20 1.50 1.50 1.50 1.50 1.30	0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02

		contorted.					
193.8	197.3	(5f, sil, py) **Graphitic/Pyritic Horizon** Fine grained, black graphitic argillite with pyrite as spherules and clusters to locally massive pyrite totalling 15-60%. The unit is silicified and contains 5% veins of quartz.	11523 11524 11525	193.80 195.00 196.50	195.00 196.50 197.30	1.20 1.50 0.80	0.11 0.19 1.10
197.3	204.9	(Quartz Vein/2a) **Quartz/Mafic Flow Zone** Fine grained, highly altered sericitized carbonated mafics with quartz veining. The zone is 70% quartz with a continuous vein from 198.7-201.7: The quartz vein contains 1-5% sulfides as pyrite and lesser pyrrhotite. 197.3-198.7: Flow 5% quartz, 3-5% pyrite. 198.7-201.7: Quartz vein, 1-5% pyrite/pyrrhotite. 201.7-204.9: Sericitized flow with 10% quartz veining and 3-5% pyrite, pyrrhotite.	11526 11527 11528 11529 11530 11531	197.30 198.70 200.20 201.70 202.70 203.70	198.70 200.20 201.70 202.70 203.70 204.90	1.40 1.50 1.50 1.00 1.00 1.20	0.02 0.02 0.02 0.02 0.02 0.02
204.9	238.4	(2a, w m ser, fol, qtz, py) **Mafic Flows** Fine to medium-grained, variably sericitized, green grey to sericite green. Unit is highly foliated, giving layered appearance as above. Upper portion of unit continues with the pyrite minor quartz, medium grained. 214.9-217.1: 5% quartz veins with 1-2% pyrite. 220.8-221.6: Porphyroblastic carbonate horizon sericitized, ankerite in matrix. 221.6-238.4: Alteration sericitization increasing down hole with a quartz veined zone 5% quartz with 1-3% pyrite from 227.9-232.4. Local schistose sections 232.4-238.4, pale sericitized carbonate green to khaki.	11532 11533 11534 11535 11536 11537 11545	204.90 214.90 216.30 227.90 229.40 230.60 231.50	206.40 216.30 217.10 229.40 230.60 231.50 232.40	1.50 1.40 0.80 1.50 1.20 0.90 0.90	0.02 0.02 0.02 0.02 0.02 0.02 0.02
238.4	251.7	(ser schist, ank, py) **Sericite Schist** Fine to medium-grained, pale yellow buff. Unit is completely sericitized, schistose has ankerite alteration in groundmass	11538 11539 11540 11541	239.30 240.30 241.30 242.00	240.30 241.30 242.00 243.00	1.00 1.00 0.70 1.00	0.02 0.02 0.02 0.02

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
		and as small grains. Locally calcite grains and very small veinlets can be found. The upper and lower contact area are very fine grained well in the center medium grained sections occur. Quartz phenocrysts or porphyroblasts occur throughout. Sub-rounded to weakly stretched. Pyrite occurs as fine disseminations mainly in a coarser grained section 239.0-242.9 meters. Pyrite is 1-3%. Quartz veining is mainly confined to 241.3-242.3 and is 50% of the section, veins that occur elsewhere are small 85 degrees to core axis, white. 249.3-251.7: Sericite alteration decreases to weak to moderate. Unit becomes medium green grey with some quartz pheno's and larger carbonate grains.					
251.7	269.1	(2b, m-ser, fol, ank) **Mafic Flow** Fine grained, medium-green in unaltered sections to pale sericite green in moderate alteration. Unit is well foliated, moderately sericitic locally. The distinguishing feature of this unit is abundant, 25%, grains of ankerite. These grains are small appearing like leucoxene, subrounded and evenly distributed. Calcite does occur locally in the groundmass, as well as ankeritization throughout. Chloritic zones locally associated with quartz masses give the impression of being selvages with some increase in the abundance of the ankerite grains. Quartz veins are small <1cm infrequent and the quartz masses are up to 10cm. Foliation remains at 78 to 83 degrees to core axis. Whole rock at 256 meters. As above, the foliation and variable alteration give the appearance of layering.					
269.1	283.5	(2b, fol, ank, cal, w-m ser) **Mafic Flow** **Fine grained, medium grey green to sericitic green locally abundant. Unit is well foliated as above but is distinguished by the presence of what appear to be stretched spherules of carbonate with local quartz phenocrysts or porphyroblasts. The stretched spherules are <3mm wide, generally, and up to 7mm in length. Very rarely they exceed 1cm in length. The quartz pheno's can occur alone or in the stretched spherules. Sericite occurs locally through the unit weak to moderately over 10-50cm. Ankerite occurs throughout the unit in the**	11542 **11543** **11544**	277.20 **278.80** **280.00**	278.80 **280.00** **281.00**	1.60 **1.20** **1.00**	0.02 **0.07** **0.02**

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
		matrix.					
		275.0-283.5: Sericitized moderately to highly with local fuchsite. A completely altered zone occurs from 272.2+278.7. The quartz pheno's persist but the spherules are obliterated. Pyrite is very minor throughout. Nil to trace.					
283.5	296.0	(2a, 5 ser, fu, fol, ank) **Mafic Flows** Fine grained, pale greenish buff to khaki coloured, highly sericitized, carbonatized, highly foliated, layered core to alteration. Fuchsite occurs as small wisps very infrequent. 283.5-289.1: Highly sericitized, carbonatized with ankerite, minor quartz veining, pyrite nil to trace as large clusters of fine grains. Unit is locally completely sericitized. 289.1-292.8: Weak to local moderate alteration. 292.8-296.0: Highly altered-sericitized, carbonatized with ankerite, pseudo layered due to variable alteration-grey to khaki layering 66 degrees to core axis.					
296.0	326.0	(2b, fol, chl, w ser) **Mafic Flows** Fine grained, green to grey dependent on alteration. Alteration is generally weak with local moderately sericitized layer sometimes associated with quartz veining at 85 degreed to core axis. Highly chloritic sections 1-4cm wide suggest selvages, widespread. Small layers have spherules with carbonate and quartz pheno's as described above over 4 meters as at 314.3 meters. Unit is foliated at 80 degrees to core axis. Quartz veining is minor, sulfides are nil.

DATES LOGGED SEPT. 28-OCT 1,1996

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
0.0	36.0	Casing, overburden to 32 meters.					
36.0	55.8	(2a, fl, mag, cal) **Mafic Flow** Medium grained to coarse grained, dark green, epidotized, weakly to moderately foliated locally. Unit is calcitic, minor quartz veining, and epidotized weak to locally moderate. Unit is magnetic. May in part be a mafic dyke.					
55.8	71.0	(3d) **Felsic Pyroclastics** Fine to medium grained, generally medium grey with dark green chloritic sections. The unit is a variable mixture of felsic pyroclastics to possible rhyolites. Where fragments are present, they are dark green possibly chloritic. Unit is weakly sericitized. Local patches to 10cm of chloritic fine grained material.					
71.0	74.5	(3e) **Lapilli Tuff** Fine grained, light to medium green sericitic, with chloritic lapilli or fragments. Unit has a "leopard" appearance and local fine/small quartz fragments. Unit probably dacitic in composition.					
74.5	76.5	(4a, chl) **Chloritic Magnetic Iron Formation** Fine grained, dark green argillaceous layers alternating with layers of magnetite: 1-1.5 cm in width. Layers are at 62 degrees to core axis. Large clusters to cubes of pyrite to 1cm are distributed throughout-generally in argillaceous layers but locally intimate with the magnetite.					
76.5	85.2	(2a, fl) **Mafic Flow** Fine to medium grained, dark green, flow with possible pillows. Local coarse area with bleached nodules on small chloritic patched or fragment. maybe an ash flow tuff but the					

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
		coarser fragmental area maybe pillow fragments. Unit becomes much finer towards lower contact. Contact at 60 degrees to core axis.					
85.2	87.0	(5a, 4a) **Argillite/Magnetite Iron Formation** As above but with layers of cherty material. Layered at 63 degrees to core axis. Pyrite as above but also disseminations and fracture fillings.					
87.0	89.6	(3d) **Felsic Tuff** Fine grained, khaki, siliceous minor quartz eyes. Upper part of unit to 87.9 meters maybe mafic flow as above with contact marked by an accumulation of pyrite pyrrhotite in fine veinlets.					
89.6	92.7	(4b/4d) **Cherty Sulfide Iron Formation/Oxide Iron Formation** Layered cherty iron formation with veins of pyrrhotite and much less pyrite with sericite argillite layers. These alternate with oxide (magnetite) iron formation as above. Layering is 62 degrees to core axis. Sulfide content is 10-15%.	11546 11547 11548	89.60 90.50 91.40	90.50 91.40 92.70	0.90 0.90 1.30	0.02 0.02 0.02
92.7	95.7	(3d) **Felsic Tuff** Fine grained, medium grey featherless with minor sulfides pyrite.					
95.7	98.5	(5a, gf, py) **Graphitic Argillite** Fine grained, black, with layered graphitic argillite with fine veinlets to locally coarse clusters of pyrite. Upper section of the unit is in part cherty.					
98.5	108.5	(3d) **Felsic Pyroclastic** Fine to medium grained, felsic tuff to crystal tuffs with quartz eyes locally, coarsely layered. Local sericitic alteration with calcite in the matrix and as small veinlets. These tuffs contain cherty iron formation layers 30-40cm wide with generally pyrrhotite, chalcopyrite as veins and accumulations. Layering at 70 degrees to core axis.	11549 11550 11551	102.40 103.90 104.90	103.90 104.90 105.80	1.50 1.00 0.90	0.02 0.02 0.02

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
108.5	117.6	(3e, 3f) **Felsic Lapilli Tuff/Fragmental** Fine grained pale green to grey matrix hosting heterolithic fragments of quartz, bleached angular fragments-pale buff coloured and locally quartz eyes. Some of the quartz eyes are rimmed with dark cores and pale rims. Upper section of the unit is mineralized with pyrrhotite as small veinlets and disseminations. Veins of tourmaline to 2cm black contorted. Lower contact 73 degrees to core axis.	11552	108.50	110.00	1.50	0.02
			11553	110.00	111.50	1.50	0.02
			11554	111.50	113.00	1.50	0.02
117.6	122.4	(3d) **Felsic Crystal Tuff** Fine grained, medium grey with quartz crystals developing feldspar pheno's towards the lower contact. Section of lapilli/fragmental as above 121.0-121.4. Lower section becomes greenish in colour.					
122.4	136.3	(3f/3d) **Fragmental Tuff** A mixed sequence of fine grained crystal tuff and heterolithic fragments as above. Locally well layered with stretched fragments and local pyrrhotite veins to 0.5cm. Pyrite is trace to <1% tourmaline as above infrequent.					
136.3	143.5	(2, fl?) **Mafic Unit** Fine grained, pale to medium green locally pseudo-layered due to alteration. Pyrrhotite occurs in contorted pale altered zones which could be disrupted pillow selvages. Weakly calcitic fracture fillings. Unit may be weakly ankeritized. Pyrrhotite can form concretions or small <2cm veins as at 142 meters.	11555	137.00	138.50	1.50	0.02
			11556	138.50	140.00	1.50	0.02

0.0	63.0	(Ovb) **Overburden**					
63.0	98.0	(2a,chl,ser,carb) **Mafic Volcanics** Fine grained, medium to dark green, soft chloritic with sections pale green to buff, sericitized, carbonatized (calcite), schistose. Locally these more highly altered sections contain fuchsite. Quartz veining is minor as white to greyish <2cm veins at 88 degrees to core axis. The entire unit is highly foliated to locally schistose. Crenulation cleavage is noted in numerous areas and small fault offsets occur in the schistose sections. Variable alteration gives the impression of bedding. Foliation´s are at 81 degrees to core axis. Crenulation are at 38 degrees. Whole rock 72.5-schistose, 97.5-weakly altered. 65.0-73.5 - Moderately to highly altered, schistose with limonite stain 66.1-66.6. 73.5-83.0 - Weak to generally moderately altered. 83.0-98.0 - Weak alteration with moderately altered 2-3cm layers. 98.0-106.0 - Foliated to nearly schistose, weak to moderately altered.					
106.0	114.0	(2a,carb) **Mafic Volcanic** Fine grained, medium grey green, carbonatized calcite, massive to weak foliation´s. Increase in quartz veining and carbonate veins to 1-2cm.					
114.0	139.1	(2b,w ser) **Mafic Volcanic** Fine grained, pale green, Mg tholeiite, massive in upper section, pillowed to 139.1. Pillows are manifested by chloritic and locally bleached selvages. Quartz veins are					

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
		minor to 2cm wide. Unit is locally moderately altered, possible sericite, carbonate, giving a weakly layered appearance. Whole rock 3415 at 122 meters. Foliation 74 degrees.					
139.1	143.2	(2 tuff,chl) **Mafic Volcanic-Tuffaceous Sediment** Fine grained, dark green, mafic tuff, thinly layered, foliated at 73 degrees to core axis, chloritized overall with local 1cm layers highly chloritic. Small <1cm calcite veinlets and minor quartz.	11560	142.20	143.20	1.00	0.02
143.2	146.3	(2 tuff,sil,carb,w ser,fol) **Altered Tuff** Unit is equivalent of above but altered with silicification, carbonatization possible sericite. Unit is greyish with a purplish overcast possible albite?? Unit contains 5% pyrrhotite as fine laminations to 3mm in width, pyrite is minor to nil. Alteration intensity decreases down section.	11561 11562	143.20 144.70	144.70 146.30	1.50 1.60	0.02 0.02
146.3	154.8	(3e,ser,carb,fol) **Tuff-Volcanoclastic** Fine grained, medium green to sericitic green ground-mass, hosting fragments, heterolithic, variably altered. Unit may be a lapilli tuff with lapilli stretched two to one 2cm long by 1cm wide. Local concentrations of carbonate, possible feldspar are subrounded to 3mm wide. This unit also contains laminae of pyrrhotite but very infrequent. Unit fines down section.	11563 11564	146.30 149.00	147.80 150.00	1.50 1.00	0.02 0.02
154.8	159.4	(2a.carb) **Mafic Volcanic** Fine to medium grained, light to medium grey to green, weakly chloritic with numerous calcite/carbonate veins, minor quartz veins. Massive to weakly foliated. Contact area is highly silicified 159.2-159.4 with carbonate veins. Contact at 81 degrees to core axis.					
159.4	175.7	(2b,carb,sil) **Mafic Volcanic** Fine to medium grained, dark green, possibly pillowed Fe tholeiite basalt. Infrequent calcite veinlets, minor quartz. Locally the unit is siliceous with finer sections. Local feldspar with possible tourmaline 168.0-168.9.

0.0	12.0	(Ovb) **Overburden**					
12.0	17.1	(2a,FeT) **Mafic Volcanic** Fine to medium grained, dark green basalt probable Fe tholeiite. Minor calcite veining, weak pyrite towards lower contact.					
17.1	143.8	(1a,tc/chl,w sil) **Ultramafic** Fine grained, dark green to black to medium grey. Dark green areas are soft, with fracture filling talc/chlorite while the more greyish areas are weakly to moderately silicified with fractures filling talc/chlorite continues. Pyrite mineralization is generally nil to 1-2% over <1-2m. Unit is locally highly fractured. The fracture fillings become mixed with carbonate in fractures below 21m and have a blue overcast. Local areas of the ultramafics appear biotitic with brownish overcast over 3-5m, increased calcite veining in these areas. Small bands of felsic intrusives occur over <1m at infrequent intervals. These intrusives range from granitic in nature to dioritic, mineralized with pyrite as fine disseminations and small cubes 1-3%. Contact are at 50 degrees to core axis. The entire unit is moderately magnetic to local strong magnetics. 69.2-73.9: **Felsic Intrusive** Medium grained, pink to reddish, granitic in nature with pyrite 1-3% as fine dissemination sand small cubic clusters. Contact 62 degrees. 73.9-143.8: Ultramafic continues with numerous mineralized felsic veins, 60 degrees to core axis to contorted. the veins generally contain 1-3% fine pyrite with 1% pyrite in the surrounding ultramafics. Blush talc carbonate fracture fillings continue. Some fractures in contact with the felsic veins contain muscovite. In areas of increased felsic veins the	11568	32.80	33.50	0.70	0.02

		ultramafics are moderately siliceous. Felsic intrusive zones continue as 1-2m wide veins to locally <10cm. There is a wide variation in colour from grey to reddish. the grey colour is probably the dominant colour with local hematitization causing the reddish discoloration. Grain size in the porphyries is also variable with feldspars to 1 1/2cm displaying a perthitic texture. Pyrite is generally 1-2% local 5% as fine disseminations. Contact are generally shallow 30-40 degrees to core axis. Some of the larger sections are listed below. 115.7-118.1: grey to pink. 129.5-134.4: Grey to reddish in the central portion.					
143.8	154.8	(7d,hem) **Feldspar Porphyry** Coarse grained, reddish hematized displaying perthitic textures. Feldspars are angular to locally subangular to rectangular blades. Feldspars are up to 1cm and well packed. The upper contact is grey coarse grained while the lower contact is fine grained, medium grey. Upper is 35 degrees to core axis and lower is 80 degrees. Pyrite is 1-2% as fine disseminations and minor fracture fillings.	11573 11574 11575	143.60 145.10 146.50	145.10 146.50 153.00	1.50 1.40 6.50	0.10 0.03 0.08
154.8	182.0	(1a) **Ultramafic** As above with numerous small felsic intrusive layers 10cm to 20cm, generally grey and fine grained.

			11712	69.50	70.90	1.40	0.03
91.0	111.1	(2a,hem,w felds) **Mafic Volcanics** Dark green generally, fine grained, magnetic, variably altered, selvages, locally softer. Mineralized with pyrite, locally 1-2%. Alteration along fractures appears feldspathic in nature, purplish buff in colour. 0.5mm around fractures. Unit is usually weakly foliated. Quartz veins are infrequent small and discontinuous. Whole Rocks 81m-silicified, carbonatized, buff to reddish.	11661	91.00	92.50	1.50	0.03
			11662	92.50	94.00	1.50	0.03

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
		100m-dark green, weakly foliated, minor fine pyrite.					
111.1	199.1	(2a,sil,carb,hem) **Altered Mafic Volcanics** The protolith is hard to distinguish but for lack of evidence to the contrary has been designated mafic volcanics. The rare unaltered patches are dark green, silicified. The unit is moderately to strongly magnetic over its length. The unit is fine grained, greenish to generally reddish in colour. Alteration in the upper 10m occurs along numerous fractures to become pervasive. Alteration is silicification, carbonatization, ankerite, probably hematization (based on colour) and bleaching. Although the alteration is variable between the mix of types, ie lessening of hematization and/or carbonatization at least one alteration assemblage is pervasive, generally silicification. A fragmental or breccia section from 122.7-125.0 may be due to stages of alteration or may be a flow breccia. One section from 152-152.7m has been completely altered to a grey to buff colour with patches to 153.1. Pyrite mineralization is fine grained disseminations <1% with minor areas slightly increased by still <1%. Whole rock: 123m-altered, hematization, silicification, ankeritization 3420. 155.4m-as above possibly more intense. 195.3-199.1: Unit is more sericitic greenish to pale grey albitized??, continues to be carbonatized with ankerite pervasive. Lower contact is crushed but appears to be sharp. Pyrite as fine disseminations <1%.	11713 11714 11715 11716 11717 11718 11719 11720 11721 11722 11723 11724 11725 11726 11727 11728 11729 11730 11731 11732 11733 11734 11735 11736	114.30 115.30 116.80 122.50 124.00 125.50 131.00 132.50 134.00 135.50 137.00 138.50 140.00 141.50 143.00 144.50 146.00 147.00 179.00 180.40 181.40 182.50 194.00 195.30 196.30 197.80	115.30 116.80 118.30 124.00 125.50 127.00 132.50 134.00 135.50 137.00 138.50 140.00 141.50 143.00 144.50 146.00 147.00 180.40 181.40 182.50 195.30 196.30 197.80 199.10	1.00 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.50 1.00 1.40 1.00 1.10 1.30 1.00 1.50 1.30	0.06 0.03 0.12 0.05 0.06 0.02 0.03 0.02 0.02 0.02 0.02 0.02 0.16 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02

108.6	111.3	(2a, alb?, cb, w ser)	11782	110.00	111.30	1.30	0.06

FROM	TO	LITHOLOGICAL DESCRIPTION	SAMPLE No.	ASSAYS FROM	TO	WIDTH	Au g/t
		Mafic Volcanic Weak reddish giving way to grey weak green sericite colour, unit is carbonatized, weakly sericitic and possibly albitized in grey layers, fine grained. Unit is massive in appearance. Nil to trace pyrite.					
111.3	126.5	(5a/5b, s ser, cb) **Altered Sediments** Fine grained, light green to greenish grey, sericitized. The unit has been altered to nearly sericite schist with carbonatization, local silicification evident. In the heavily sericitized zones the foliations/laminations are contorted suggesting fine sediment originally. Quartz veining is restricted to 120.8-122.1 as white veins at various angles. 30 to 80 degrees to core axis. Pyrite <1% in quartz veined areas, nil to trace elsewhere. Lower contact /pervasive sericitization is sharp at 61 degrees to core axis. Whole rock: 112.4-3426-pervasive sericite, light green. Possible tourmaline as grains to <1mm.	11783 11784	119.80 120.80	120.80 122.20	1.00 1.40	0.13 0.02
126.5	144.0	(5a, 5b, w ser) **Argillaceous Sediments** Fine grained, medium grey to locally pale green where sericite increases. Foliations are contorted with sericite in foliations. Pyrite is generally minor but can increase to 1-3% in foliations and as disseminations as at 129.9-130.7m. Quartz veining is infrequent white veins <10cm, 80 degrees to core axis. Ankerite occurs as small veinlets in foliations, contorted and as grains, <5% of unit. Unit is non magnetic. Whole rock: 133m-3427-grey, weakly to moderately sericitic, ankerite<5%, pyrite nil to trace. 140.0-144.0: Sericite decreases down hole to contact with 10% quartz veins as white veins up to 20cm, minor pyrite.	11785 11786 11787 11788 11789 11790 11791 11792 11793	128.40 129.90 130.80 137.00 138.00 139.00 140.50 142.00 143.00	129.90 130.80 131.80 138.00 139.00 140.50 142.00 143.00 144.00	1.50 0.90 1.00 1.00 1.00 1.50 1.50 1.00 1.00	0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02 0.02
144.0	260.0	(5a/5b, w ser loc, ank, cal) **Argillaceous greywacke** Fine to locally medium grained, medium to dark grey, laminated. Small <1m sections of increased sericite as at 150m. Pyrite is continuous through the section as <1% disseminations, clusters, and infrequently as fine laminae. Soft sediment deformation to z folds as at 153.4m. Unit is	11794 11795 11796 11797 11798 11799 11800	188.00 189.50 190.50 206.00 207.50 208.50 210.00	189.50 190.50 191.50 207.50 208.50 210.00 211.60	1.50 1.00 1.00 1.50 1.00 1.50 1.60	0.02 0.02 0.02 0.02 0.02 0.02 0.02

Global Positioning System Data (If available)

Township/Area: Bristol/Carscallen/Deform/Thornloe

M or G-Plan Number: G3998/G3040/G3224/G3229

Please remember to:
- obtain a work permit from the Ministry of Natural Resources as required;
- provide proper notice to surface rights holders before starting work;
- complete and attach a Statement of Costs, form 0212;
- provide a map showing contiguous mining lands that are linked for assigning work;
- include two copies of your technical report.

3. Person or companies who prepared the technical report (Attach a list if necessary)

4. Certification by Recorded Holder or Agent

I, ~~Robert Cathcart~~ George J. Kolesar (Print Name), do hereby certify that I have personal knowledge of the facts set forth in this Declaration of Assessment Work having caused the work to be performed or witnessed the same during or after its completion and, to the best of my knowledge, the annexed report is true.

Signature of Recorded Holder or Agent		Date: April 1 1997
Agent's Address: PO Box 1205, 60 Shirley St. South, Timmins, Ont P4N 7J5	Telephone Number: (705) 268-9600	Fax Number: (705) 268-9572

5. Work to be recorded and distributed. Work can only be assigned to claims that are contiguous (adjoining) to the mining land where work was performed, at the time work was performed. A map showing the contiguous link must accompany this form.

	Mining Claim Number. Or if work was done on other eligible mining land, show in this column the location number indicated on the claim map.	**Number of Claim Units.** For other mining land, list hectares.	**Value of work performed** on this claim or other mining land.	**Value of work applied** to this claim.	**Value of work assigned** to other mining claims.	**Bank.** Value of work to be distributed at a future date.

I, George J. Kolesar (Print Full Name), do hereby certify that the above work credits are eligible under subsection 7 (1) of the Assessment Work Regulation 6/96 for assignment to contiguous claims or for application to the claim where the work was done.

Signature of Recorded Holder or Agent Authorized in Writing: April 1, 1997 | Date: April 1, 1997

6. Instructions for cutting back credits that are not approved.

Some of the credits claimed in this declaration may be cut back. Please check (✓) in the boxes below to show how you wish to prioritize the deletion of credits:

- ☐ 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- ☐ 2. Credits are to be cut back starting with the claims listed last, working backwards; or
- ☑ 3. Credits are to be cut back equally over all claims listed in this declaration; or
- ☐ 4. Credits are to be cut back as prioritized on the attached appendix or as follows (describe):

RECEIVED JUL 0 3 1997 MINING LANDS BRANCH

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

RECEIVED
JUL 03 1997
MINING LANDS BRANCH

Ontario Ministry of Northern Development and Mines

Statement of Costs for Assessment Credit

Transaction Number (office use): W.9760.00160

Personal information collected on this form is obtained under the authority of subsection 6(1) of the Assessment Work Regulation 6/96. Under section 8 of the Mining Act, the information is a public record. This information will be used to review the assessment work and correspond with the mining land holder. Questions about this collection should be directed to the Chief Mining Recorder, Ministry of Northern Development and Mines, 6th Floor, 933 Ramsey Lake Road, Sudbury, Ontario, P3E 6B5.

Work Type	Units of Work Depending on the type of work, list the number of hours/days worked, metres of drilling, kilometres of grid line, number of samples, etc.	Cost Per Unit of work	Total Cost
Diamond Drilling	1959.5 metres	53.54/metre	104,904.00
Labour	108 man days	225/man day	24240.00
Assaying	285 samples	9.50/sample	2707.00
		2.17460	
Associated Costs (e.g. supplies, mobilization and demobilization).			
Transportation Costs			
Rental truck & gas			1064.00
Food and Lodging Costs			
		Total Value of Assessment Work	132915.00

RECEIVED
JUL 0 8 1997
MINING LANDS BRANCH

Calculations of Filing Discounts:

1. Work filed within two years of performance is claimed at 100% of the above Total Value of Assessment Work.
2. If work is filed after two years and up to five years after performance, it can only be claimed at 50% of the Total Value of Assessment Work. If this situation applies to your claims, use the calculation below:

TOTAL VALUE OF ASSESSMENT WORK × 0.50 = Total $ value of worked claimed.

Note:
- Work older than 5 years is not eligible for credit.
- A recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

RECEIVED
APR 2 1997
PORCUPINE MINING DIVISION

Certification verifying costs:

I, George J. Koleszar (please print full name), do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on the accompanying Declaration of Work form as Lands Manager (recorded holder, agent, or state company position with signing authority) I am authorized to make this certification.

Dear Sir or Madam:

Submission Number: 2.17460

Status

Subject: Transaction Number(s): W9760.00160 Deemed Approval

We have reviewed your Assessment Work submission with the above noted Transaction Number(s). The attached summary page(s) indicate the results of the review. WE RECOMMEND YOU READ THIS SUMMARY FOR THE DETAILS PERTAINING TO YOUR ASSESSMENT WORK.

If the status for a transaction is a 45 Day Notice, the summary will outline the reasons for the notice, and any steps you can take to remedy deficiencies. The 90-day deemed approval provision, subsection 6(7) of the Assessment Work Regulation, will no longer be in effect for assessment work which has received a 45 Day Notice.

Please note any revisions must be submitted in DUPLICATE to the Geoscience Assessment Office, by the response date on the summary.

NOTE: This correspondence may affect the status of your mining lands. Please contact the Mining Recorder to determine the available options and the status of your claims.

If you have any questions regarding this correspondence, please contact Bruce Gates by e-mail at gates_b@torv05.ndm.gov.on.ca or by telephone at (705) 670-5856.

Yours sincerely,
