HELICOPTERBORNE MAGNETIC SURVEY OF
WHITNEY - SHAW PROPERTY
PORCUPINE MINING DIVISION

by

R.S. Middleton

Rosario Resources Canada Ltd.

1407 - 7 King St. E.

TORONTO, Ontario

June 30, 1980

INTRODUCTION

A helicopterborne magnetic survey was flown over Rosario claims in Whitney and Shaw Twps. in October - December 1979 by Aerodat Ltd. This survey corresponded with a regional survey flown for Amax Minerals Exploration and that survey has been reported on separately by T. Watts.

The survey covered the southern part of Whitney Twp. as well as most of Shaw Twp. which are located 6 miles southeast of Timmins. The location of the claims is given on the attached location map.

Previous Airborne Surveys

Southern Whitney Twp. has been surveyed in the early 1970's by Canadian Aero using the Otter, EM and magnetic package and the results of this survey are filed for assessment under the name of Oro Mines Ltd. The same area has been flown by Dighem Ltd. for Cominco using the Dighem II - magnetometer package. This data has been filed under Rosario's name. No airborne surveys are on file for the Shaw claim area.

Property

The claims covered are all held by Rosario Resources Canada Ltd.'s license or by registered option. These claims are:

SURVEY PROCEDURE AND INSTRUMENTATION

The survey was flown by Jet Ranger helicopter using a Barringer AM 104 proton precession total field magnetometer. The current to the towed sensorhead was cycled every 1 second thus giving a data point every 130 - 140 feet. The sensor was towed 50 feet below the helicopter. Lines were flown at 1/8 mile spacing northeastward in Shaw and northwestward in Whitney. The data was contoured at Data Plotting in Toronto at a scale of 1:15,000 with contours at 20 gamma intervals. Flight path recovery was accomplished using a 35 mm camera on board the helicopter and plotting locations on photo mosaics. The total line mileage flown over each claim groups is as follows:

| | |
|----------------------|--------------------|
| ✓ P. 522256 - 522282 | 14.3 miles |
| P. 500922 - 500925 | 1.9 miles |
| P. 500926 - 500927 | 1.2 miles |
| P. 536528 - 536530 | 1.34 miles |
| P. 516795 | 0.96 miles |
| P. 516796 - 516797 | <u>1.15 miles</u> |
| | <u>20.85 miles</u> |

INTERPRETATION

The Shaw claims covered by the survey contain two major magnetic features, a narrow northeast trend that corresponds to a ENE type diabase dike and a broad, high intensity northwest trend that corresponds to an oxide iron formation. The low gradient magnetic pattern northeast of the iron formation trend corresponds to an area of felsic rocks (quartzey rhyolite) - mainly extrusive tuffs etc. with possible high level intrusive components. On the Whitney - Shaw township line near the lot 3 - 4 line a small area of magnetic relief corresponds to thoeilite basalt rocks. Another anomaly with no known outcrop for correlation occurs on the southeast corner of the claims and is interpreted to be caused by ultramafic rocks which are relatively unaltered.

In Whitney Twp. the areas of broad low gradient corresponds to felsic tuffs while the high intensity trends correspond to iron formation or ultramafic rocks.

North south diabase dikes are rare but one can be seen in the Whitney -
Cody Twp. line magnetic pattern.

The main structure in Whitney is a northeast trending anticlinal feature
that causes repeating rock trends.

CONCLUSIONS

The helicopterborne magnetic survey has delineated the main stratigraphic
units such as iron formations and ultramafics. Detailed ground surveys
are required to outline small narrow features.

Respectfully submitted,

R. Middleton
Exploration Manager

RM/lyd

TOTAL CLAIMS 27

If space insufficient, attach list

OFFICE USE ONLY

GEOPHYSICAL TECHNICAL DATA

GROUND SURVEYS If more than one survey, specify data for each type of survey

Number of Stations _____ Number of Readings _____
Station interval _____ Line spacing _____
Profile scale _____
Contour interval _____

MAGNETIC

Instrument _____
Accuracy – Scale constant _____
Diurnal correction method _____
Base Station check-in interval (hours) _____
Base Station location and value _____

ELECTROMAGNETIC

Instrument _____
Coil configuration _____
Coil separation _____
Accuracy _____
Method: Fixed transmitter Shoot back In line Parallel line
Frequency _____
(specify V.L.F. station)
Parameters measured _____

GRAVITY

Instrument _____
Scale constant _____
Corrections made _____

Base station value and location _____

Elevation accuracy _____

INDUCED POLARIZATION
RESISTIVITY

Instrument _____
Method Time Domain Frequency Domain
Parameters – On time _____ Frequency _____
– Off time _____ Range _____
– Delay time _____
– Integration time _____
Power _____
Electrode array _____
Electrode spacing _____
Type of electrode _____

SELF POTENTIAL

Instrument _____ Range _____

Survey Method _____

Corrections made _____

RADIOMETRIC

Instrument _____

Values measured _____

Energy windows (levels) _____

Height of instrument _____ Background Count _____

Size of detector _____

Overburden _____

(type, depth - include outcrop map)

OTHERS (SEISMIC, DRILL WELL LOGGING ETC.)

Type of survey _____

Instrument _____

Accuracy _____

Parameters measured _____

Additional information (for understanding results) _____

AIRBORNE SURVEYS

Type of survey(s) _____

Instrument(s) _____

(specify for each type of survey)

Accuracy _____

(specify for each type of survey)

Aircraft used _____

Sensor altitude _____

Navigation and flight path recovery method _____

Aircraft altitude _____ Line Spacing _____

Miles flown over total area _____ Over claims only _____

Magnetic

GEOCHEMICAL SURVEY – PROCEDURE RECORD

Numbers of claims from which samples taken _____

Total Number of Samples _____

Type of Sample _____
(Nature of Material)

Average Sample Weight _____

Method of Collection _____

Soil Horizon Sampled _____

Horizon Development _____

Sample Depth _____

Terrain _____

Drainage Development _____

Estimated Range of Overburden Thickness _____

SAMPLE PREPARATION

(Includes drying, screening, crushing, ashing)

Mesh size of fraction used for analysis _____

General _____

ANALYTICAL METHODS

Values expressed in: per cent
 p. p. m.
 p. p. b.

Cu, Pb, Zn, Ni, Co, Ag, Mo, As, -(circle)

Others _____

Field Analysis (_____ tests)

Extraction Method _____

Analytical Method _____

Reagents Used _____

Field Laboratory Analysis

No. (_____ tests)

Extraction Method _____

Analytical Method _____

Reagents Used _____

Commercial Laboratory (_____ tests)

Name of Laboratory _____

Extraction Method _____

Analytical Method _____

Reagents Used _____
