Summary

The Currie-Bowman Project (Falconbridge Option) is located in central Currie and Bowman Townships, approximately 55 kilometers east of Timmins, Ontario. The property consists of three separate claim blocks totaling 30 claims (102 units).

From February 5 to March 5, 2000, five holes totaling 1,652 meters were drilled to test for gold mineralization on the Currie West block. Three holes tested the Grindstone Creek Showing, where drilling in 1999 intersected **2.08 gpt Au, 19 gpt Ag, and 0.5% Zn over 18.9 meters** in hole CB-04. Two holes tested separate IP anomalies west of the showing. During the drilling program, Crone Geophysics completed a borehole EM survey hole CB-06 in an attempt to identify off-hole sulphides associated with the Grindstone Creek zone.

Results from the 2000 drilling program were mixed. All three holes testing the Grindstone Creek zone intersected thick intervals of pyrite-sericite schist associated with the Grindstone Creek horizon. Significant gold mineralization was intersected in hole CB-07, which returned **3.95 gpt Au, 132 gpt Ag and 3% Zn over 2.1m (HW zone) and 2.6 gpt Au, 8.2 gpt Ag and 0.19% Zn over 5.05m (FW zone)**. Anomalous silver and zinc values were intersected in holes CB-06 and CB-08, which returned up to **0.39 gpt Au, 14.4 gpt Ag and 0.2% Zn over 7.0 meters and 0.13 gpt Au, 23.4 gpt Ag and 0.1% Zn over 9.25 meters** respectively. Holes CB-09 and CB-10 failed to intersect anomalous gold mineralization.

Although not strong, the borehole survey identified a response west of hole CB-06 at a depth of 360m and most likely represents sulphides associated with the zone. The area west of CB-06 has not been tested at depth.

Low priority targets remain to be drill tested west of Grindstone Creek, however, future drilling should concentrate on the Grindstone Creek mineralized horizon east of line 132E and on the zone at depth, west of hole CB-06.

An IP survey completed during the drilling program has identified a zone of high chargeability that extends east from L132E to L140E. This chargeability anomaly appears to represent the eastern strike extension of the Grindstone Creek zone and should be tested by a minimum of four drill holes.

In addition, two deeper holes should be drilled west of hole CB-06, below hole CB-04 on the Grindstone Creek zone. This drilling would test for a possible steep westerly rake of the mineralization intersected in holes CB-04 and CB-07.

1.0 Introduction

The Currie–Bowman Project comprises three separate claim blocks totaling 30 claims in central Currie and Bowman Townships, approximately 55 kilometers east of Timmins.

The project is under option from Falconbridge Limited. Under the terms of the agreement, Echo Bay Mines Ltd. can earn 100% of Falconbridge's 60% interest in the property (subject to a Falconbridge back-in) by making payments totaling \$60,000 over three years and expenditures of \$550,000 by December, 2002. The remaining 40% interest in the property belongs to Cross Lake Minerals.

This report describes the results of a diamond drill program completed in February and March of 2000. The purpose of the drilling was to test for gold mineralization on the Grindstone Creek zone, located on claim 1198869 in concession III, lots 8 and 9 of Currie Township, as well as two separate IP targets located west of the zone.

The Grindstone Creek zone was first drilled by Falconbridge in 1995/1996 while exploring for base metals on the property. Five holes were drilled approximately 450 meters east of Grindstone Creek to test HLEM and enzyme leach anomalies. Although no significant base metals were intersected, the holes drilled through a thick zone of auriferous pyrite-sericite schist with anomalous gold values including **3.5 gpt Au over 2.25 meters** (hole CUR32-2). In December, 1998, Echo Bay Mines Ltd. optioned the property from Falconbridge and completed an IP survey to the west of the Falconbridge drilling. In February and March of 1999, five holes totaling 1,550 meters were drilled to test the west strike extension of the mineralization intersected in the Falconbridge drill holes. During this drilling program, hole CB-04 intersected **2.08 gpt Au, 19 gpt Ag, and 0.5% Zn over 18.9 meters** approximately 50 meters west and 50 meters vertically below hole CUR32-2.

2.0 Location and Access (figures 1,2)

The Currie – Bowman claims are situated in central Currie and Bowman Townships. The west property boundary is located approximately 50 kilometers east of Timmins along the Bond and Currie Township line, the eastern property boundary extends to the eastern portion of Bowman Township, approximately 4 kilometers south of the town of Matheson.

The claims are readily accessible via a number of all season gravel roads extending south from Highway 101 between Shillington and Matheson. Access to the Grindstone Creek Zone is via Currie Township Road 4, which extends south for 4.8 kilometers from highway 101. An 800 meter trail heading south from the end of this road leads directly to the zone.

3.0 Property Status

The property comprises 3 separate claim blocks totaling 30 claims in central Currie and Bowman Townships. All claims are unpatented mining claims registered in the Larder Lake Mining Division, administered out of Kirkland Lake, Ontario.

A summary of the status for the individual claims is presented below.

BOWMAN EAST BLOCK

4.0 PERSONNEL

The drilling contract was awarded to NDS Drilling of Timmins, Ontario. Paul Degagne of Echo Bay Mines Ltd. supervised the drilling program and logged all drill core. Randy Pierce and Dean Humphry of Timmins were contracted on a daily basis to cut core samples. All core samples were analyzed by Bondar-Clegg Laboratories for Au (fire assay) and 34 element I.C.P.

5.0 2000 DRILLING PROGRAM

Five holes totaling 1,652 meters were drilled between February 5 and March 5, 2000.

Three holes (CB-06, CB-07 and CB-08) tested the Grindstone Creek Zone in the vicinity of hole CB-04 drilled in 1999. Hole CB-06 was planned to intersect the zone 75 meters below hole CB-04, however, due to deviation, the hole actually cut the zone approximately 60 meters below hole CB-04. As planned, holes CB-07 and CB-08 tested the zone 40 meters below and 50 and 100 meters east of hole CB-04 respectively.

All holes intersected between 30 to 50 meters of pyrite-sericite schist associated with the Grindstone Creek zone. As in the 1999 drilling, a diabase sill averaging 25 meters in drill thickness divides the zone into hangingwall and footwall segments. In general, the hangingwall portion of the zone includes an interval of massive to semi-massive pyrite that sits stratigraphically along an argillite-dacite tuff contact, grading to heavily banded pyrite (>20%) within silicified to sericite altered dacite tuff. Footwall to the dyke, pyrite content generally decreases to between 10% to 20% and occurs as bands or laminations parallel to foliation and fine disseminated grains within a moderate to strong sericite altered dacite tuff. Pyrite content and intensity of alteration decrease gradually downhole into a relatively unaltered and unmineralized tuff. Sphalerite occurs as both fine to coarse stringers associated with galena in late cross-cutting quartz stringers within

the massive to semi-massive portion of the zone, or as fine yellow to yellowish brown disseminated grains in the underlying banded pyrite-sericite schist.

Holes CB-09 and CB-10 tested two separate I.P. anomalies west of Grindstone Creek. Both holes collared and remained in mafic to intermediate tuff. The I.P. anomalies were intersected as planned, consisting of sericite-pyrite (up to 5%) altered sections of the tuffaceous units.

Tables 1 and 2 summarize the drilling results. Figures 3a to 3c are plans showing drill hole locations. Drill logs and sections of individual drill holes and all assay certificates are appended. Two vertical logitudinal sections of the all holes intersecting the Grindstone Creek Zone are shown in figures 4a and 4b. Individual drill holes are summarized below.

All holes were drilled with NQ size core, which is currently being stored at Echo Bay's Timmins exploration office.

Table 1

DDH CB-10	12000E / 10250N			No Significant Results

6.0 Borehole EM Survey

On February 15, 2000, Crone Geophysics completed a borehole EM survey on CB-06 to determine off-hole EM responses (massive pyrite) associated with the Grindstone Creek zone. The results of the survey were interpreted by Falconbridge Limited's geophysical staff and are described below as quoted from a memo to Echo Bay from Falconbridge dated March 15, 2000. Survey plots with notes are appended.

"Hole CB-06 was surveyed using a footwall loop, which results in reversed coupled anomalies. A cross-over from positive to negative on the x component indicates that the source is located above the

hole, and vice versa for below the hole. A cross-over from positive to negative on the y-component indicates that the source is located left of the hole when one looks down the azimuth of the hole, and negative to positive for a source to the right of the hole.

The results from CB-06 do not show any strong responses. There are some early to mid-channel responses that outline poor conductors. The z component results show an 11 channel positive peak on the z component at 360m, with the nearest edge located 20m away. The source of the anomaly is located to the left (west). The positive peak on the x component indicates the source is located beside the hole rather than above or below the hole. There is also a 13 channel positive peak on the z component at 270m from the hole, located above and to the right (east) of the hole. This second anomaly is the stronger of the two.”

Based on Section 131E and the trace of hole CB-06, the response identified at 270m and east of the hole is most likely due to graphitic argillite. The response to the west at a depth of 360m appears to represent sulphides associated with the Grindstone Creek zone.

7.0 CONCLUSIONS AND RECOMMENDATIONS

A five hole, 1,652 meter drill program was completed on the Currie West claims of the Currie-Bowman property in February and March 2000.

Holes CB-06,07 and 08 tested the Grindstone Creek zone in the vicinity of hole CB-04 drilled in 1999. All holes intersected heavy pyrite mineralization and strong sericite alteration associated the zone. Significant gold, silver and zinc mineralization was intersected in CB-07, which returned **3.95 gpt Au, 132 gpt Ag, and 3% Zn over 2.1 meters** hangingwall to a diabase sill, and **2.6gpt Au, 8.2 gpt Ag, and 0.19% Zn over 5.05 meters** footwall to the sill. Holes CB-06 and CB-08 returned low gold values but intersected highly anomalous silver and zinc mineralization. A borehole EM survey was completed on hole CB-06, the results of which indicate a sulphide conductor associated with the Grindstone Creek zone west of the hole at a depth of 360m.

Holes CB-09 and CB-10, drilled west of Grindstone Creek on two separate IP targets failed to intersect anomalous gold values or Grindstone Creek zone-like mineralization/alteration.

Based on the results of both the 1999 and current (2000) drill programs, and on the results of the recently completed IP survey (refer to Report of Geophysics – Winter 2000) covering the eastern strike extension of the Grindstone Creek zone, the following is recommended:

- A minimum of two holes (425m each) should be drilled to test the Grindstone Creek zone west of hole CB-06. Hole CB-06 was originally designed to undercut hole CB-04 but due to an east deviation, undercut hole CB-07 by approximately 60m vertical. The area to the west of CB-06 and below CB-04 remain untested and should be drilled to test for a west plunge to the mineralization.

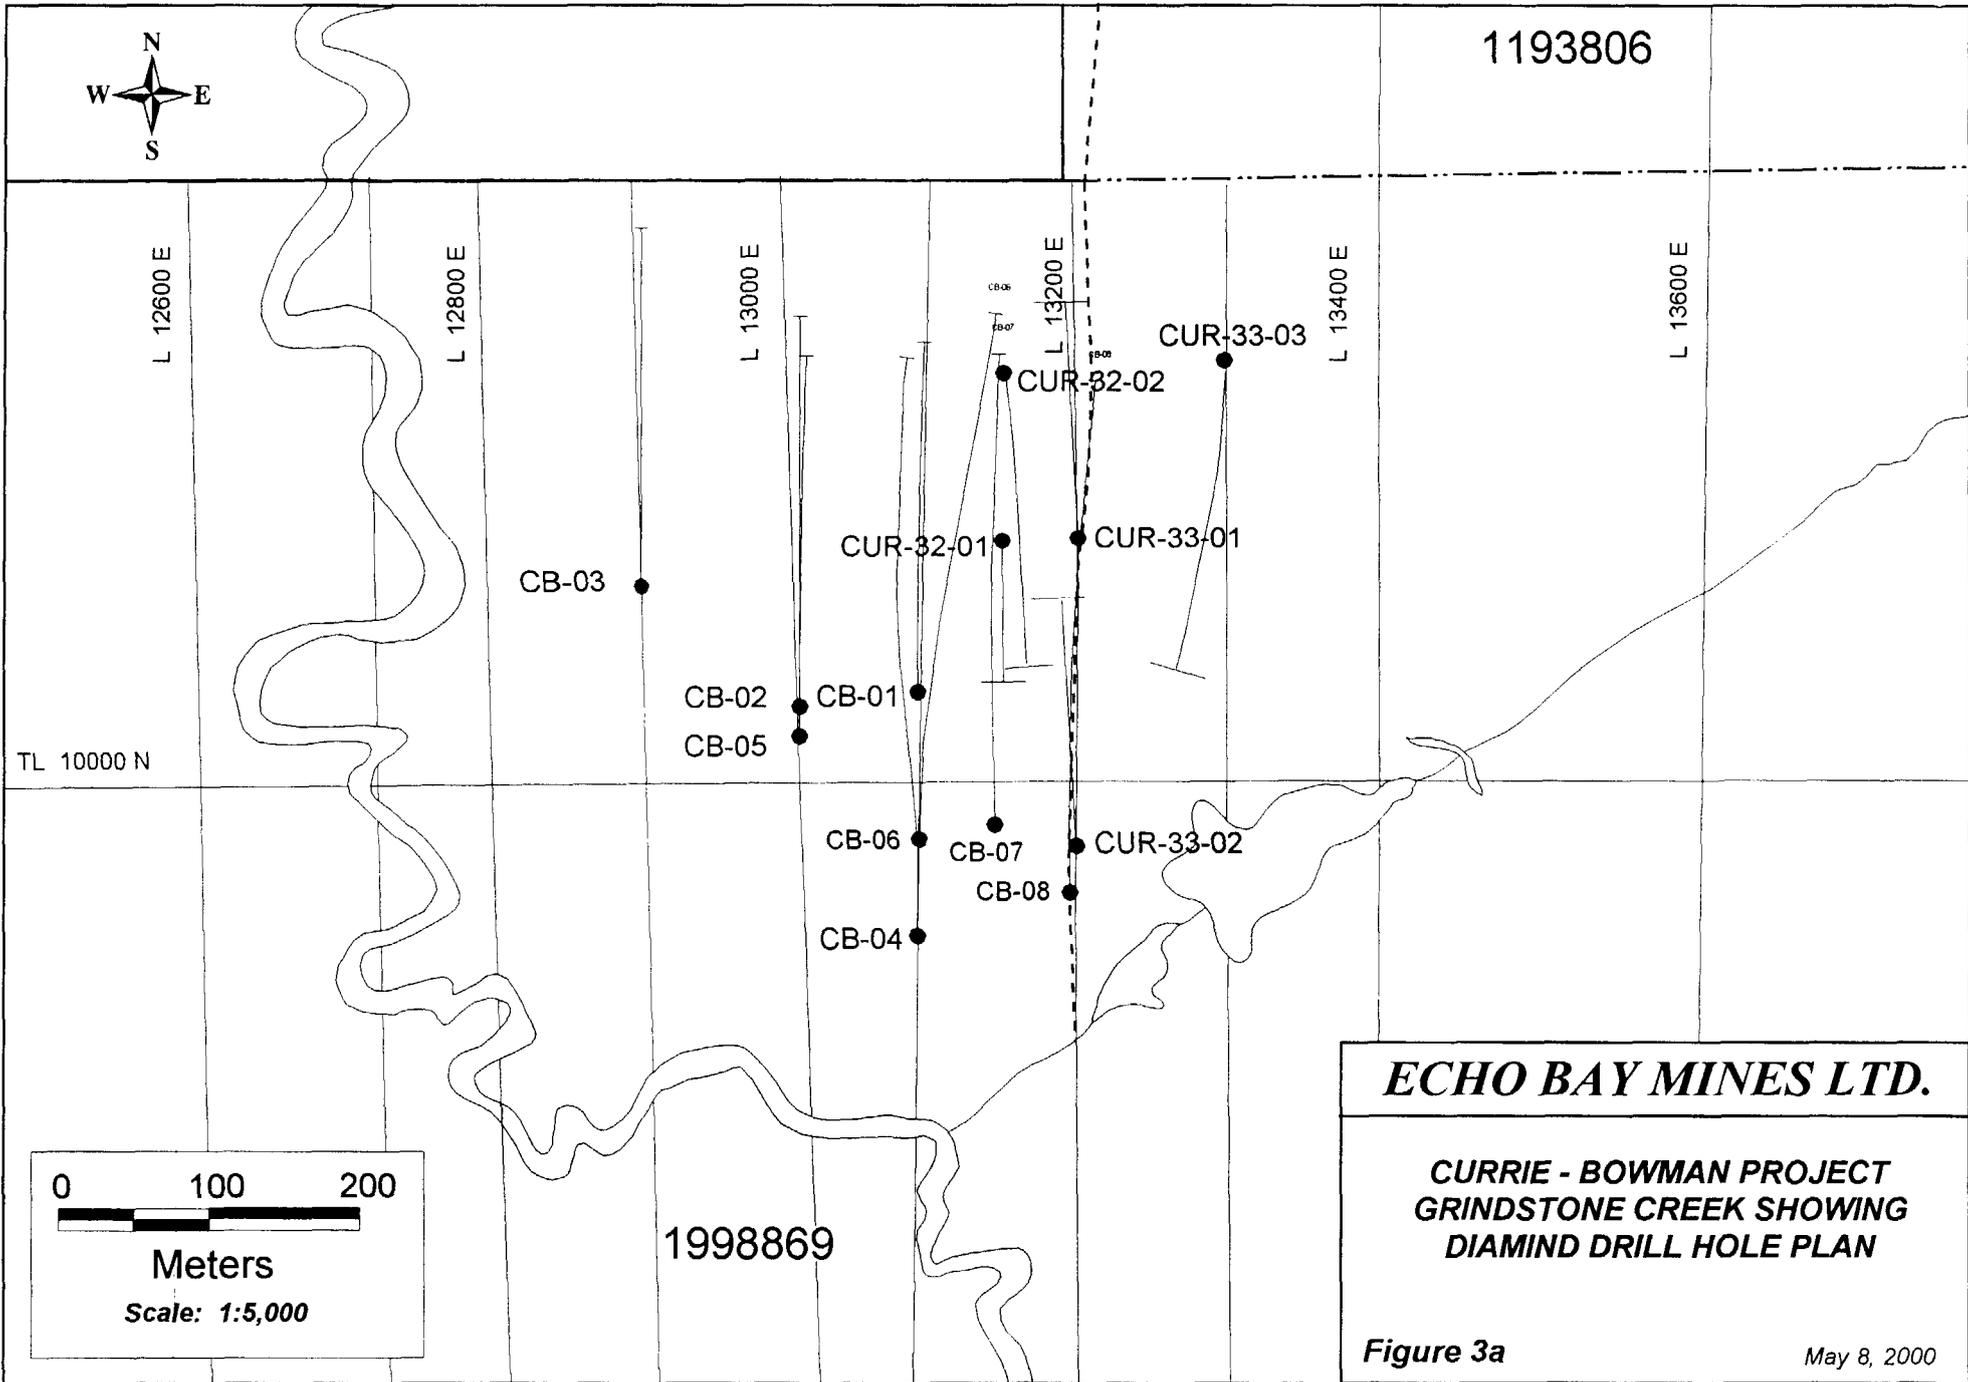

- A minimum of four holes should be drilled to test the east strike extension of the Grindstone Creek zone. A recently complete IP survey has extended the chargeability anomaly associated with the zone for 800 meters to the east. This area has never been drilled.
- Low priority targets still remain to be tested west of Grindstone Creek. Several holes should be drilled as a fence on several of the IP trends identified in the 1999 IP survey.

Respectfully submitted,

ASSAY CERTIFICATES

Intertek Testing Services
Chimitec Bondar Clegg

Certificat D'Analyse
Assay Lab Report

REPORT: T00-57038.0 (COMPLETE)

REFERENCE:

CLIENT: ECHO BAY MINES
PROJECT: 741

DATE RECEIVED: 14-FEB-00
DATE PRINTED: 16-FEB-00

SUBMITTED BY: P. DEGAGNE

DATE APPROVED	ORDER	ELEMENT	NUMBER OF ANALYSES	LOWER DETECTION LIMIT	EXTRACTION	METHOD
000216	1	Au30 Gold	11	5 PPB	Fire Assay of 30g	30g Fire Assay - AA

SAMPLE TYPES	NUMBER	SIZE FRACTIONS	NUMBER	SAMPLE PREPARATIONS	NUMBER
DRILL CORE	11	-150	11	CRUSH, SPLIT PULVERIZATION	11 11

REPORT COPIES TO: MR PAUL DEGAGNE

INVOICE TO: MR PAUL DEGAGNE

This report must not be reproduced except in full. The data presented in this report is specific to those samples identified under "Sample Number" and is applicable only to the samples as received expressed on a dry basis unless otherwise indicated.

4. Certification by Recorded Holder or Agent

 I, PAUL DEGAGNE - Echo Bay Mines, do hereby certify that I have personal knowledge of the facts set forth in this Declaration of Assessment Work having caused the work to be performed or witnessed the same during or after its completion and, to the best of my knowledge, the annexed report is true.

Signature of Recorded Holder or Agent <i>[Signature]</i>	Date <i>June 27/2000</i>
Agent's Address <i>Box 551, Timmins, ON P4N-7E7</i>	Telephone Number <i>705-363-2366</i>
	Fax Number <i>705-363-2222</i>

5. Work to be recorded and distributed. Work can only be assigned to claims that are contiguous (adjoining) to the mining land where work was performed, at the time work was performed. A map showing the contiguous link must accompany this form.

00080.00872

Mining Claim Number. Or if work was done on other eligible mining land, show in this column the location number indicated on the claim map.	Number of Claim Units. For other mining land, list hectares.	Value of work performed on this claim or other mining land.	Value of work applied to this claim.	Value of work assigned to other mining claims.	Bank. 6. Instructions for cutting back credits that are not approved.

Some of the credits claimed in this declaration may be cut back. Please check (✓) in the boxes below to show how you wish to prioritize the deletion of credits:

- 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- 2. Credits are to be cut back starting with the claims listed last in this declaration, or
- 3. Credits are to be cut back equally over all claims listed in this declaration; or
- 4. Credits are to be cut back as prioritized on the attached appendix or as follows (describe):

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

For Office Use Only

Received Stamp	Deemed Approved Date	Date Notification Sent
	Date Approved	Total Value of Credit Approved
Approved for Recording by Mining Recorder (Signature)		

Personal information collected on this form is obtained under the authority of subsection 6 (1) of the Assessment Work Regulation 6/96. Under section 8 of the Mining Act, this information is a public record. This information will be used to review the assessment work and correspond with the mining land holder. Questions about this collection should be directed to a Provincial Mining Recorder, Ministry of Northern Development and Mines, 3rd Floor, 933 Ramsey Lake Road, Sudbury, Ontario, P3E 6B5.

Work Type	Units of work Depending on the type of work, list the number of hours/days worked, metres of drilling, kilometres of grid line, number of samples, etc.	Cost Per Unit of work	Total Cost
Drilling (contractor costs)	1652 metres	48.60	80,287.20
Core splitting	119 hours 119 hours	15.60	1856.40
Au Assays	11 samples	9.50	104.50
Au + 34 element ICP Assays	272 samples	16.00	4352.00
core logging/supervision	30 days	300.00	9000.00
report writing	3 days	300.00	900.00
Associated Costs (e.g. supplies, mobilization and demobilization).			
Transportation Costs			
Food and Lodging Costs			
Total Value of Assessment Work			96,500.1

Calculations of Filing Discounts:

2.20423

1. Work filed within two years of performance is claimed at 100% of the above Total Value of Assessment Work.
2. If work is filed after two years and up to five years after performance, it can only be claimed at 50% of the Total Value of Assessment Work. If this situation applies to your claims, use the calculation below:

TOTAL VALUE OF ASSESSMENT WORK	x 0.50 =	Total \$ value of worked claimed.
--------------------------------	----------	-----------------------------------

Note:

- Work older than 5 years is not eligible for credit.
- A recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

Certification verifying costs:

I, Paul DeGagne (please print full name), do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on the accompanying

Declaration of Work form as Project Geologist - Echo Bay Mine I am authorized to make this certification.
(recorded holder, agent, or state company position with signing authority)
 - agent for Falconbridge Ltd.

Dear Sir or Madam:

Submission Number: 2.20423

Status

Subject: Transaction Number(s): W0080.00272 Approval

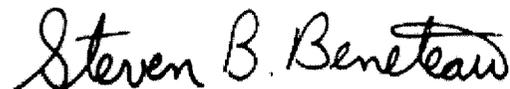

We have reviewed your Assessment Work submission with the above noted Transaction Number(s). The attached summary page(s) indicate the results of the review. WE RECOMMEND YOU READ THIS SUMMARY FOR THE DETAILS PERTAINING TO YOUR ASSESSMENT WORK.

If the status for a transaction is a 45 Day Notice, the summary will outline the reasons for the notice, and any steps you can take to remedy deficiencies. The 90-day deemed approval provision, subsection 6(7) of the Assessment Work Regulation, will no longer be in effect for assessment work which has received a 45 Day Notice. Allowable changes to your credit distribution can be made by contacting the Geoscience Assessment Office within this 45 Day period, otherwise assessment credit will be cut back and distributed as outlined in Section #6 of the Declaration of Assessment work form.

Please note any revisions must be submitted in DUPLICATE to the Geoscience Assessment Office, by the response date on the summary.

If you have any questions regarding this correspondence, please contact JIM MCAULEY by e-mail at james.mcauley@ndm.gov.on.ca or by telephone at (705) 670-5880.

Yours sincerely,
