**TIMMINS, ONTARIO**

**February 14. 2005**

Between October 29 and November 4, 2004 numbered company 1377753 ONT INC. completed 312.0 metres of diamond drilling in two holes on staked mining claim L 1140851 in Walker Township, Ontario. Claim 1140851 equates to the SW1/4, N1/2 of Lot 5, Concession V of the Township.

The property is located approximately 60 kilometres east-northeast of Timmins, Ontario. Concession roads and local logging roads lying north of the Black River and the town of Matheson offer excellent access into the work area.

Drill core was logged and sampled at a facility just off the Airport road in Timmins. It is also currently in storage at the same location. Logging was completed on November 23, 2005. The splitting of 14 samples was finished up December 15, 2004. The samples were shipped by bus on December 16, 2004 to Swastika Labs in Swastika, Ontario where they were analysed for their gold content. Check analyses were also carried out by the lab.

Drill hole K15-62A was the first attempt to drill test a targeted IP anomaly. The hole was terminated at 54.0 metres when the rods broke through into overburden after drilling 3.0 metres of what was thought to be bedrock. The hole was re-collared as K15-62 30.0 metres behind the abandoned hole and successfully completed to a depth of 258.0 metres.

Field supervision of the drill program was carried out by Merle Cosby. Core logging and the sampling of 14 core intervals (sample numbers 60051-64) was performed by Wayne Corstorphine, the author of this covering report.

Seventeen additional samples (27.0 through to 48.9 metres) are to be split and analysed at some future date.

Mr. Cosby resides at 13 Windermere Road, St. Catherines ON, L2T 3W1 – Tel 905-684-7953. The author's address is 441 Hart Street, Timmins ON, P4N 6X3 – Tel 704-264-3090.

The following history of the Cosby Property is summarized from a January 2005 compilation by MPH Consulting Limited of Toronto. The data is used here with the permission of MPH and Mr. Cosby.

**1979                    Hollinger Mines Ltd.**

Ground magnetometer and very low frequency (“VLF-EM”) surveys over six claims in the S1/2 of Concession V, on Lots 3 and 4, Walker Twp. The western portion of the surveys extended onto the SE corner of the Cosby Property. Three diamond drill holes were drilled including two (WA1-1-79 and WA1-2-79) on a north-south section located about a kilometre east of the Cosby Property.

**1981-82                Amax minerals Exploration Ltd.**

Exploration on eight claims Concession Vein, Lot 5 Walker Twp. – now a large portion of the western half of the Cosby Property. Electromagnetic survey and a single diamond drill hole (1131-09-1) in this area.

**Early 1980's            Ontario Geological Survey**

Operation Black River Matheson (“BRIM”), a multi-disciplinary geoscience program focusing on forty townships between Nighthawk Lake and the Quebec border included Walker Township. In 1983 a Questor airborne Input Survey at 200m line spacing (aeromagnetic and electromagnetic data). Regional basal till sampling by the OGS.

**1985-88                Merle Cosby**

Mr. Cosby's original staking was in 1985. The initial property consisted of ten contiguous claims in Concession V, Lot 5 and the north half of Lot 6. In 1985 magnetic and VLF electromagnetic surveys on north-south lines at 400 foot spacing over the east half of the property. In 1986-88 period, prospecting and

soil geochemical activities. In 1989 a compilation report by Gillick. Claims lapsed.

**1990-98**

**1377753 Ontario Inc.**

Current Cosby property, held by 1377753 Ontario Inc. was acquired in stages beginning with the re-staking of the nucleus of the original Concession Vein, Lot 5 area in September, 1990. Additional claims were staked in November 1993 and June 1998 to bring the property to its current size and configuration. In incremental stages (1992, 1994, and 1996) horizontal loop electromagnetic (“HLEM”) coverage was gradually completed over the property grid. This was followed in May 1998 by a reconnaissance gravity survey over part of the property. In April 1999 a single diamond drill hole was completed near the centre of Concession Vein, Lot 5, followed by an Induced Polarization/Resistivity (“IP”) survey along three selected grid lines in the area.

**2000**

**Falconbridge Limited**

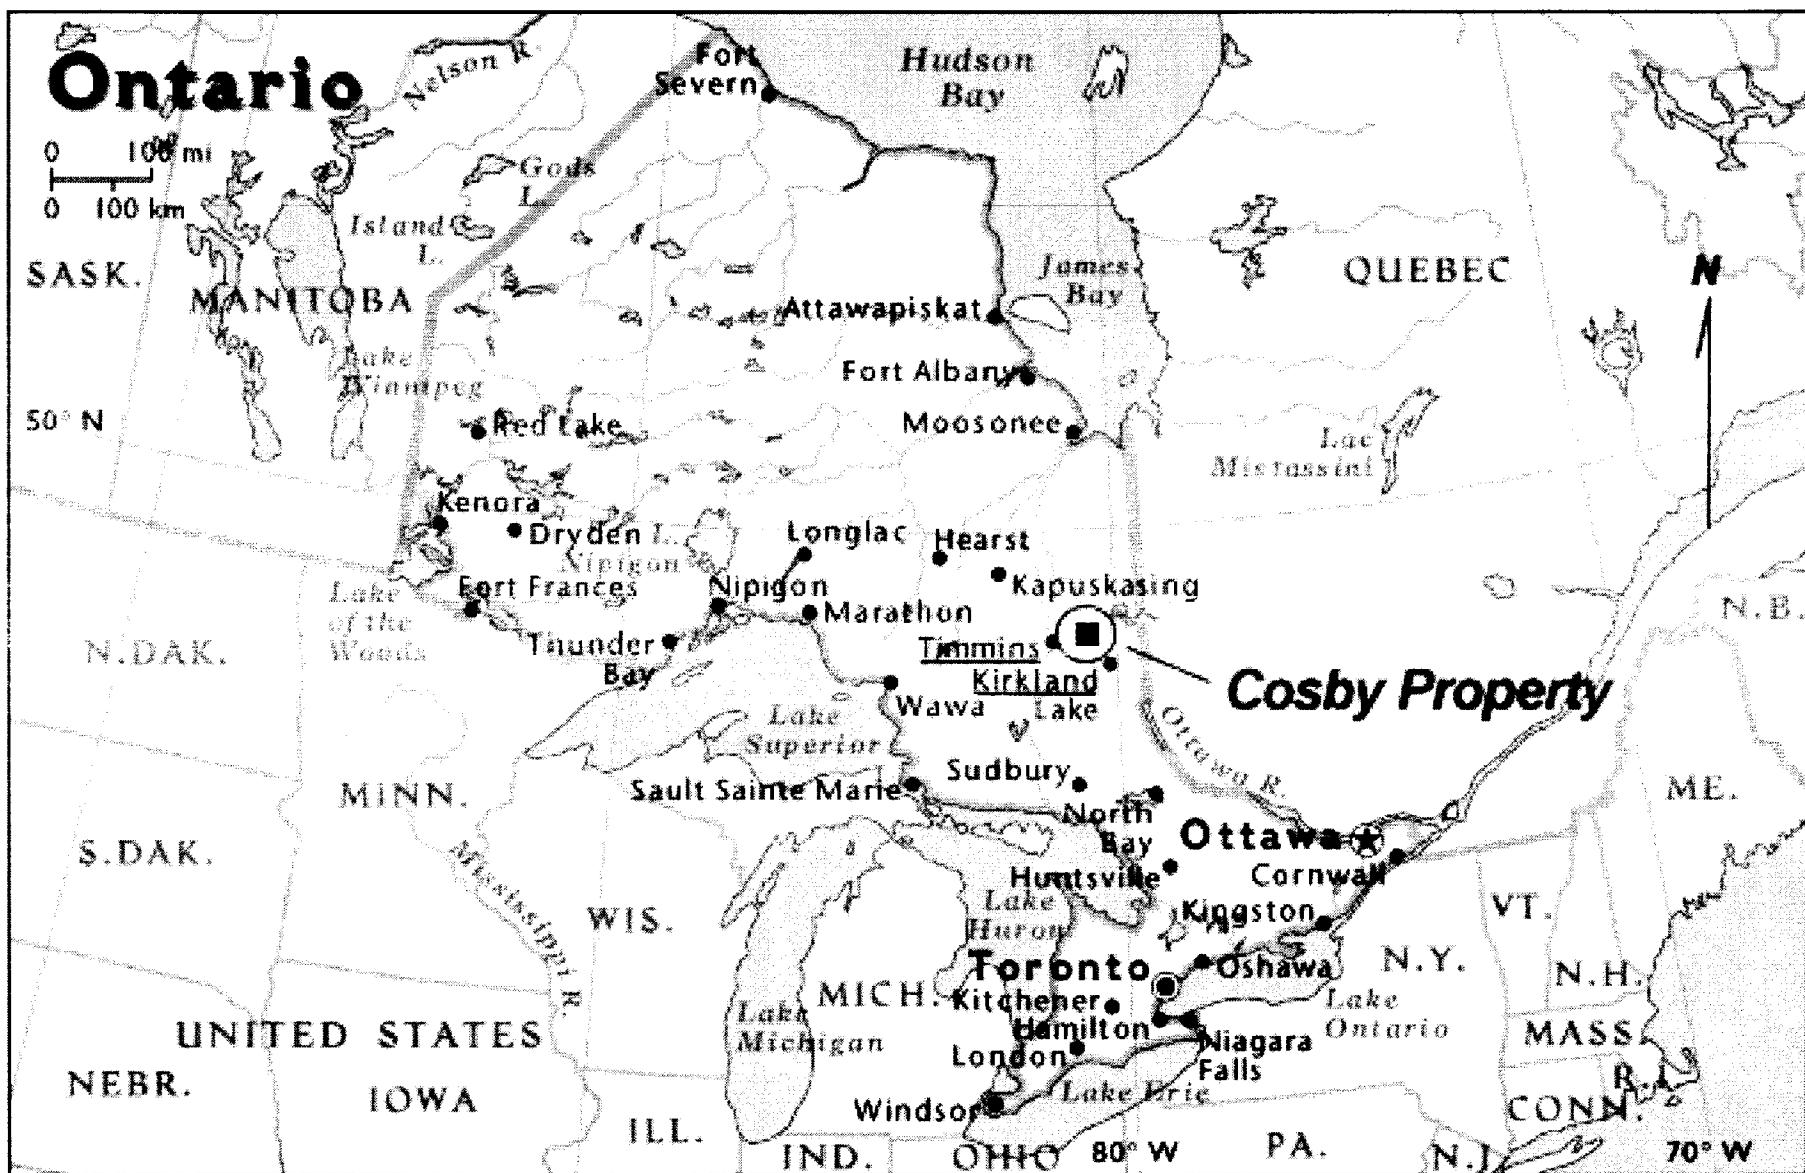

Optioned property from 1377753 Ontario Inc. under agreement dated October 31, 2000. In second half of 2001 line-cutting (north-south lines at 100 metre spacing), ground magnetometer and HLEM surveys. Completed a single 258 metre diamond drill hole. Borehole Time-Domain Electromagnetic (“TDEM”) followed. Falconbridge held the option into the 2001-2002 year by notifying the Company of its intention to continue and by making the second option payment. No further work was done and the agreement was subsequently terminated.

| 170.8              | 178.9 | Altered                    | Strong hyaloclastite presence as matrix to large flow blocks on cm to 30 cm scale.   |   |   |  |   |      |  |                                 |  |
|                    |       | Intermediate Flow          | Good hyaloclastic textures – fine to medium-grained fragments forming tight mass   |   |   |  |   |      |  |                                 |  |
|                    |       | Breccia                    | around near aphanitic flow fragments.  |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Colours continue to be shades of beige suggesting strong sericite alteration.  |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Nil sulphides.   |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Lower contact sharp.   |   |   |  |   |      |  |                                 |  |
| 178.9              | 258.0 | Intermediate               | Andesite   |   |   |  |   |      |  |                                 |  |
|                    |       | Volcanic                   | Initial 3.0m display continued moderate sericite alteration but this gradually dissipates and the volcanic changes to a light grey colour.             |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Groundmass is fine-grained and very homogeneous as is the overall appearance of the unit.  |   |   |  |   |      |  |                                 |  |
|                    |       |                            | No flow features, subtle changes in shading.   |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Very uniform.  |   |   |  |   |      |  |                                 |  |
|                    |       |                            | 206.7: Subtle flow structures start to appear.   |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Maintains greyish colouring – medium with lighter cast locally.  |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Core angle be quite hard.  |   |   |  |   |      |  |                                 |  |
|                    |       |                            | This is pristine unaltered volcanic flow rock  |   |   |  |   |      |  |                                 |  |
|                    |       |                            | Local flow structures continue through 223.0.  |   |   |  |   |      |  |                                 |  |

\*For features such as foliation, bedding, schistosity, measured from the long axis of the core.

\*Exemples de caractéristiques : foliation, schistosité, stratification. L'angle est mesuré par rapport à l'axe longitudinal de la carotte.

Dear Sir or Madam

**Submission Number:** 2.29453  
**Transaction Number(s):** W0580.00426

**Subject: Approval of Assessment Work**

We have approved your Assessment Work Submission with the above noted Transaction Number(s). The attached Work Report Summary indicates the results of the approval.

At the discretion of the Ministry, the assessment work performed on the mining lands noted in this work report may be subject to inspection and/or investigation at any time.

If you have any question regarding this correspondence, please contact LUCILLE JEROME by email at lucille.jerome@ndm.gov.on.ca or by phone at (705) 670-5858.

Yours Sincerely,

A handwritten signature in black ink that reads "Ron C Gashinski".
