Report on Geochemistry

Samples 21109 - 21116

Mountjoy Township Gold Property, Timmins, Ontario

2.16720

Quanl # 2.3899

Dale R. Pyke

June, 1996

Timmins, Ontario

**Comstate Resources Ltd
Report on Geochemistry
Mountjoy Township Property, Timmins Ontario**

Introduction

The property, 6 km northwest of Timmins City Centre (Figure 1), is in part located in Lot 8, Conc 1V, Mountjoy Township (Figure 2)

Comstate Resources Ltd is the owner of the mining rights on claims P568931, P568934 and the patented half lot (N1/2, Lot 8, Conc 1V) immediately to the north.

The property is readily accessed via the Sandy Falls road.

Previous reports on the property have described the general geology (Timmins files - T2359 and T2526).

This report discusses the geochemistry of eight samples of diamond drill core from hole MJ-86-06, located near the south boundary of the patented half lot (Figure 3). The hole, 487 feet in length, was drilled by Zahoffy Mines Limited in 1986 and collared at -50 degrees, azimuth 110.

The core is stored at the regional core library. Numbers of the analyzed samples and corresponding footages are as follows:

<u>Sample</u>	<u>Footage</u>
21109	- 389
21110	- 483
21111	- 184
21112	- 279
21113	- 209
21114	- 146
21115	- 103
21116	- 89

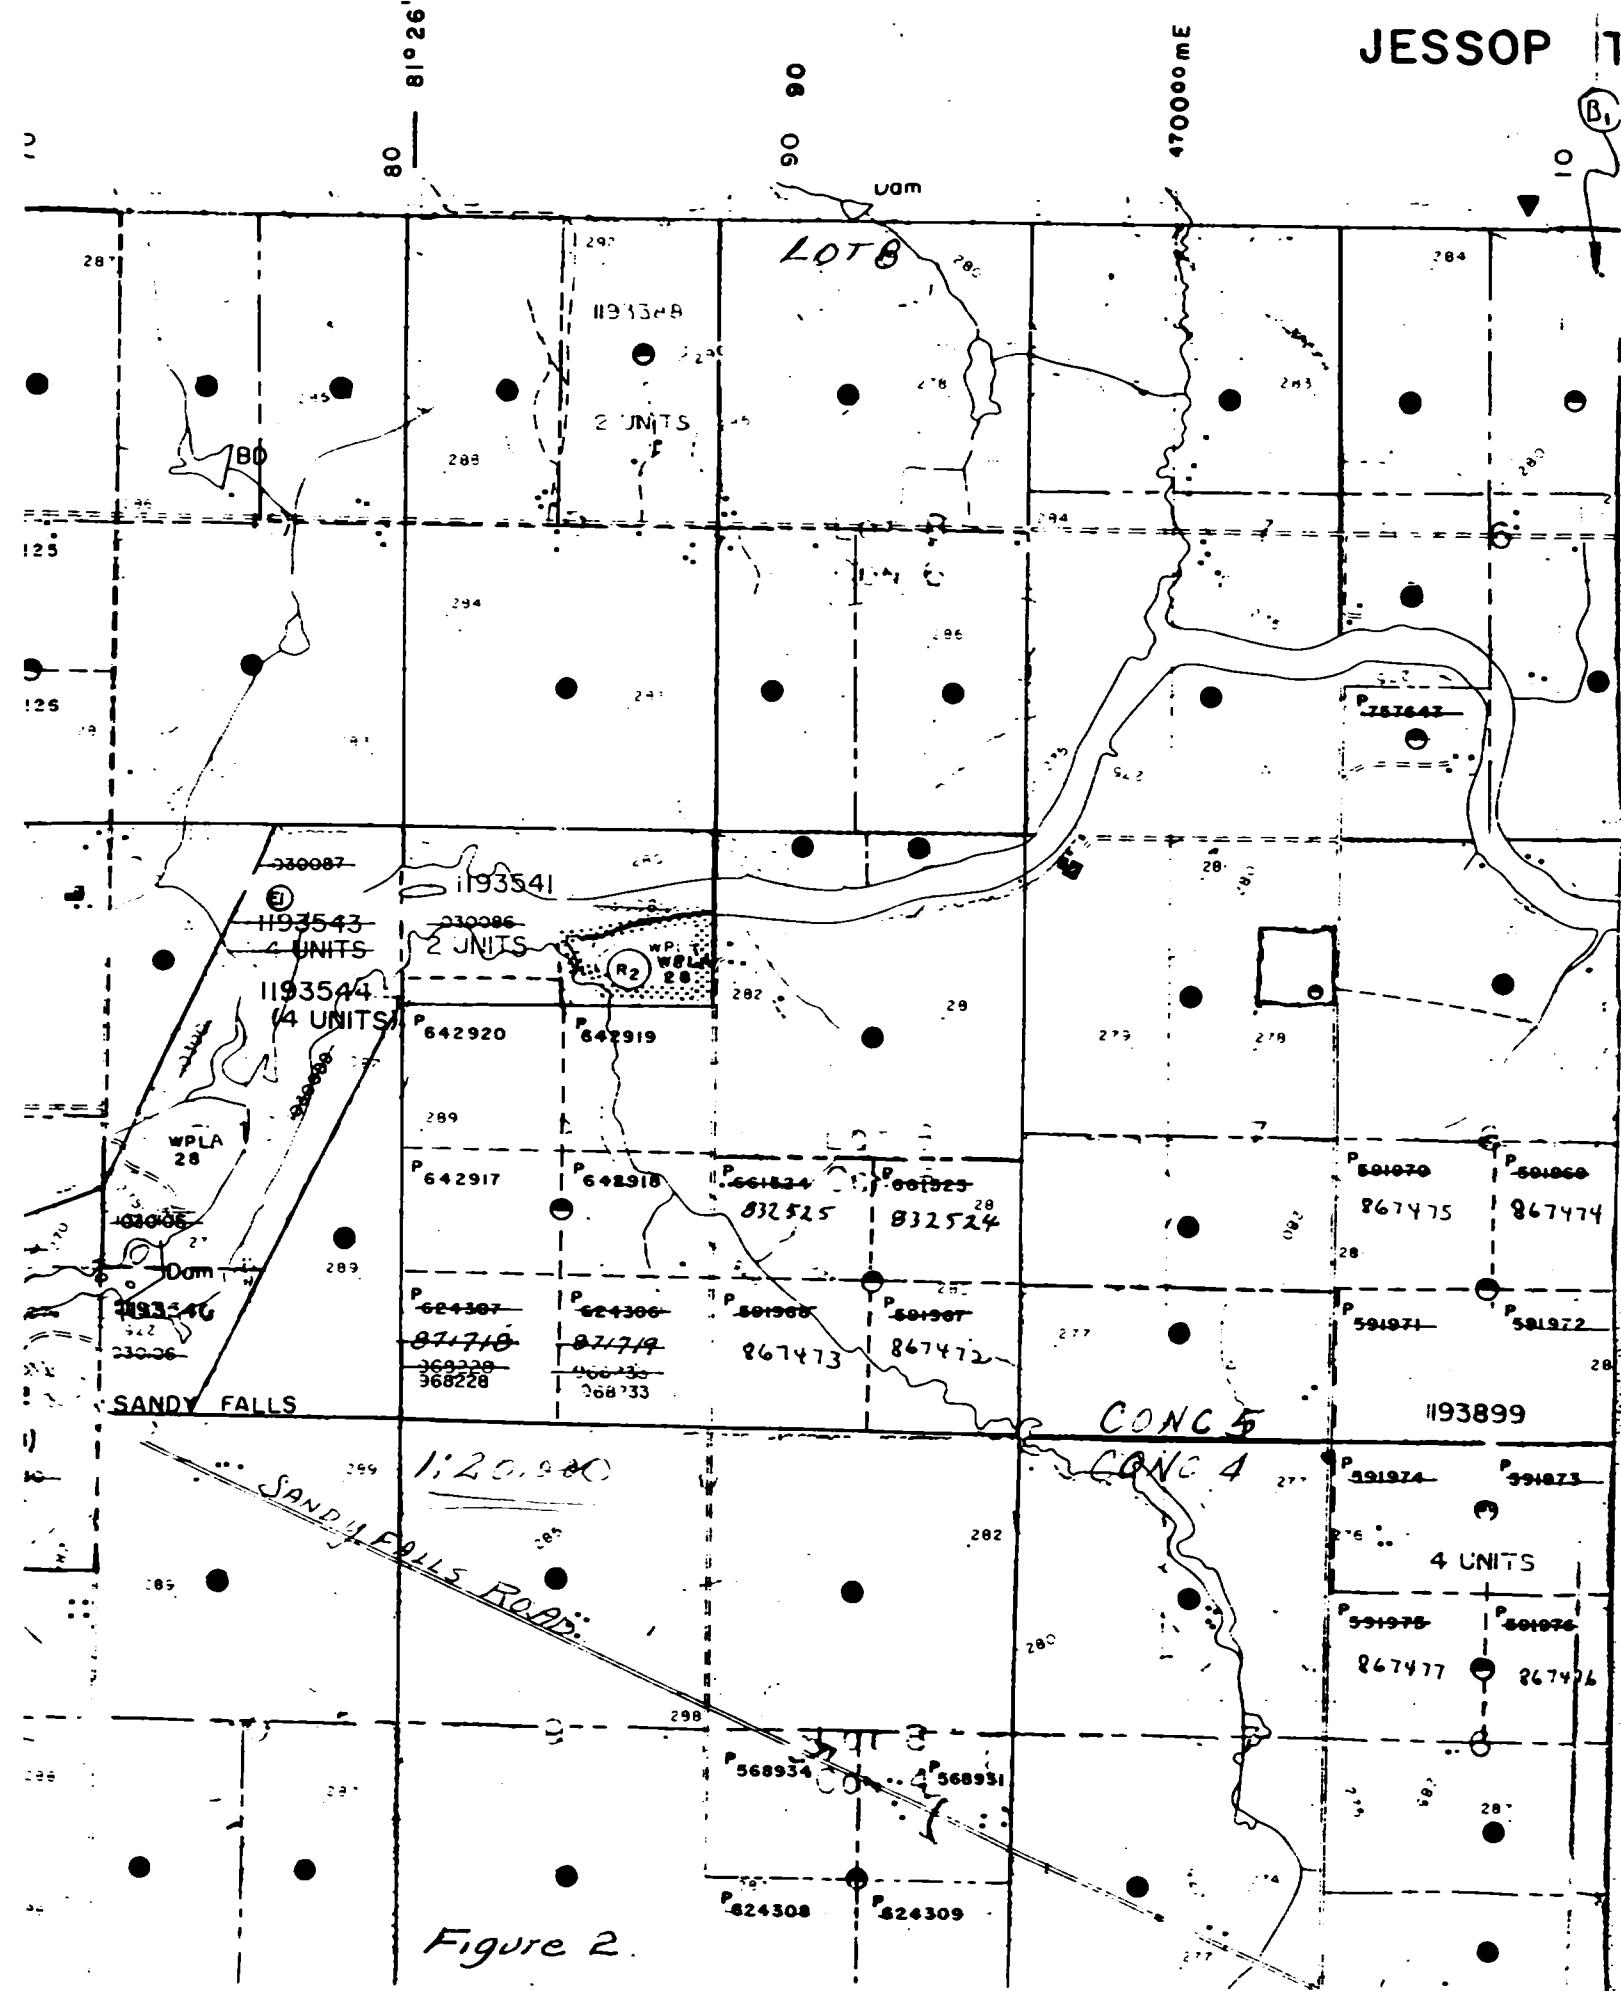

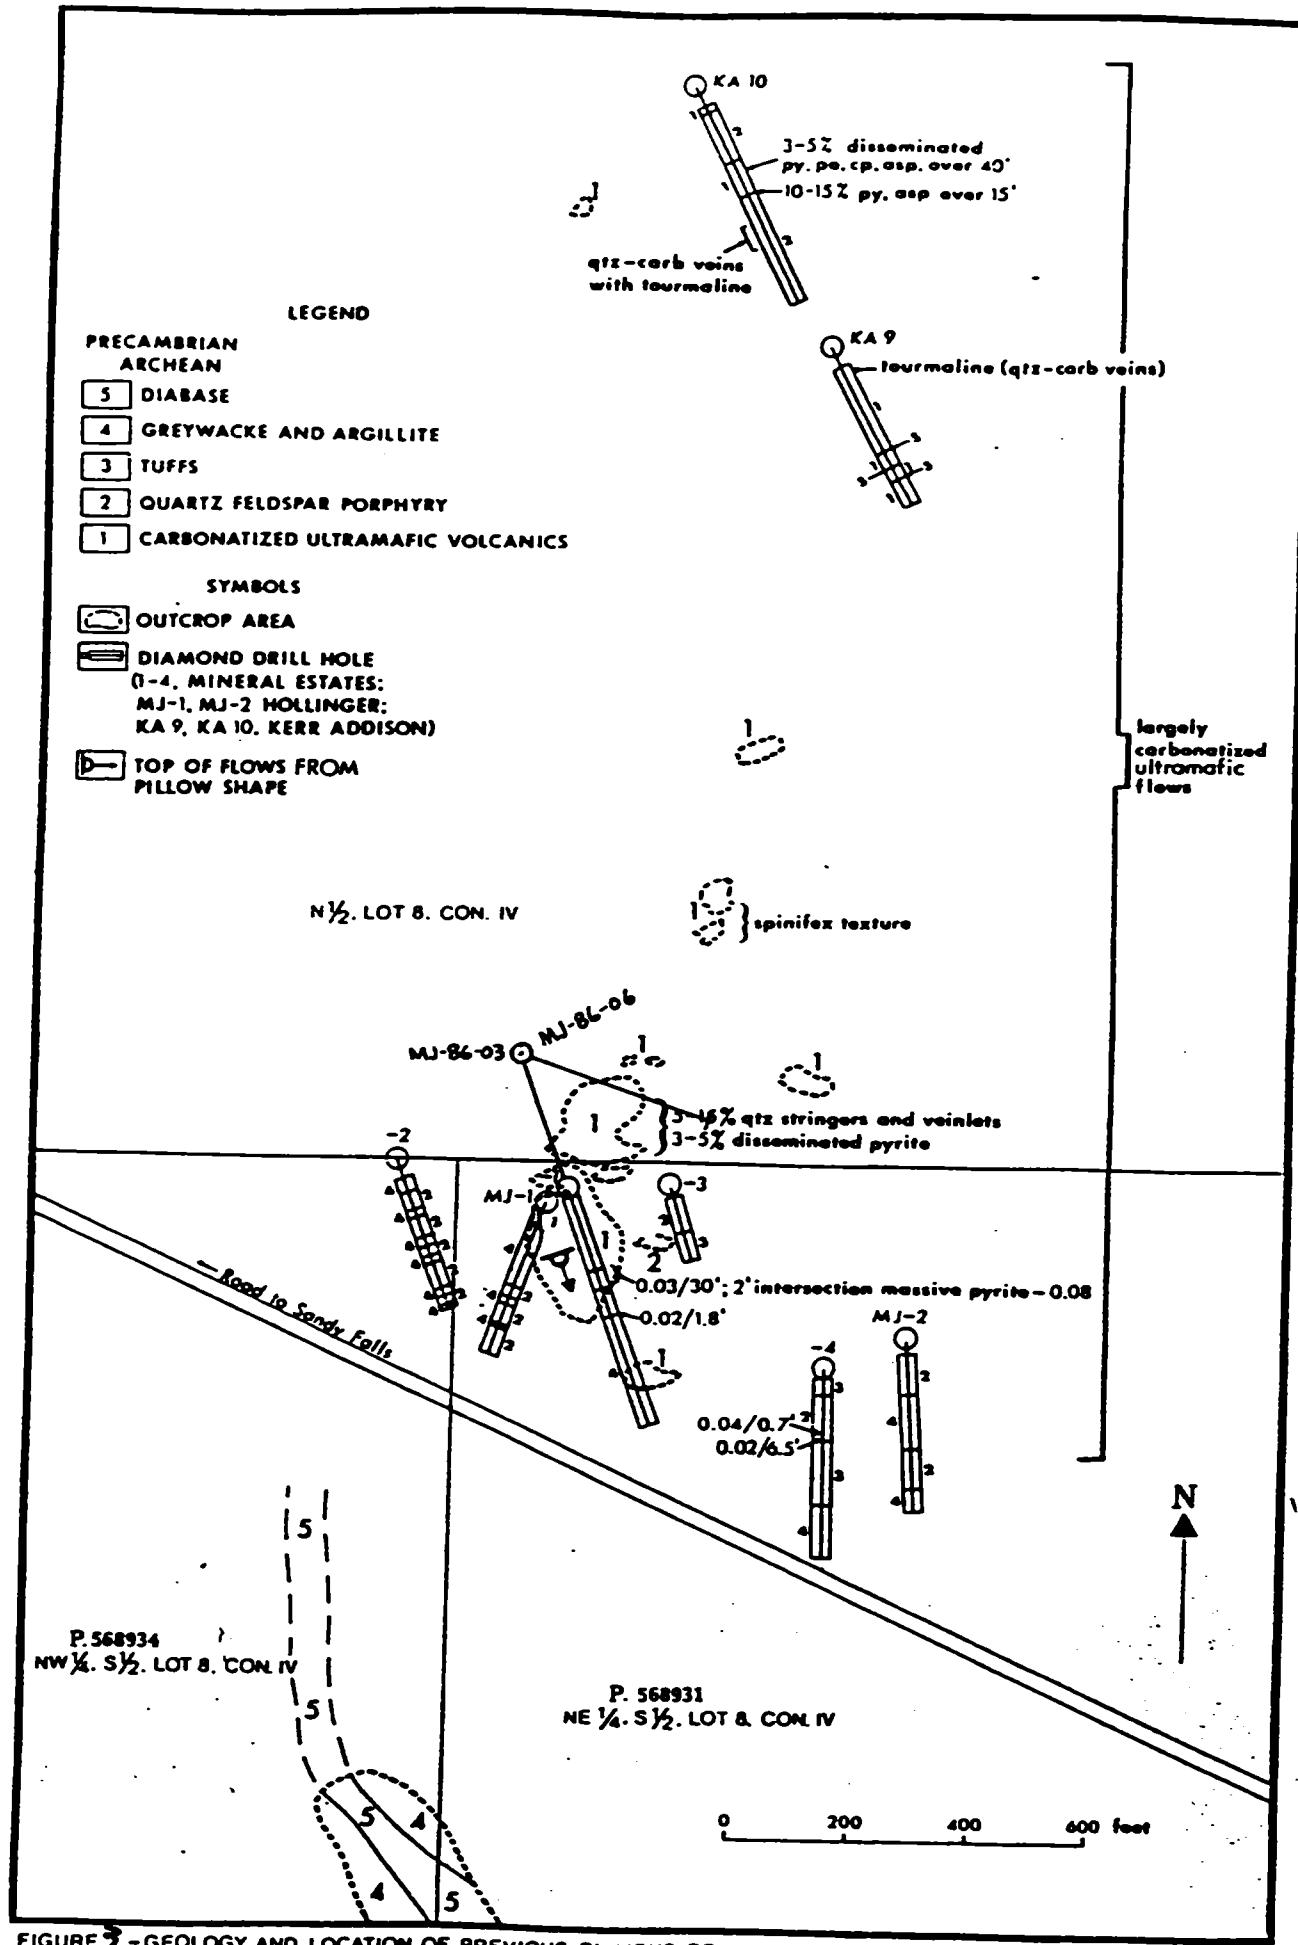

Figure 2.

Geochemistry of Samples 21109 - 21116

Diamond Drill Hole MJ-86-96, Mountjoy Township

Discussion

Eight samples of highly altered core were obtained from diamond drill hole MJ-86-96, drilled on Comstate Resources Mountjoy Township gold property. Samples 21109, 21112 - 21114 were originally logged as komatiites, samples 21110 - 21111 as mafic volcanics and samples 21115 - 21116 as porphyry. Sample descriptions are given in Table 1 and the geochemical data are presented in Table 2 and in the appended original data sheets.

On both the Jensen Cation Plot (Figure 4) and the AFM Diagram (Figure 5), none of the samples plot within the komatiitic field. This is unusual since samples 21112 and 21114 are very chrome rich (0.34 and 0.35 weight percent respectively) and both samples contain some chrome mica (fuchsite). Iron enrichment during carbonatization, to form ferroan dolomite-ankerite and pyrite, may account for the unusually high iron to magnesium ratios in these rocks. Samples 21109 and 21113 plot as tholeiites and are not significantly chrome bearing; as such, they are likely tholeiitic basalts. Samples 21110 and 21111 were logged as magnesium tholeiites and both samples plot within the calc-alkaline field. This is likely due to intense sericitization and possible albitization of the rocks during gold related hydrothermal alteration. Samples 21115 and 21116, logged as highly carbonatized and sericitized feldspar porphyries, both plot as predicted within the more differentiated portions of the calc-alkaline field on the Jensen Plot and the AFM diagram. A plot of TiO₂ versus Zr (Figure 6) supports the interpretation that these samples represent original basalt and komatiitic compositions.

Bivariate plots utilizing relatively immobile trace elements (Figures 7 and 8) indicate that the rocks are sub-alkaline, with the single exception of 21114 on the Zr/TiO₂*0.001 vs. Nb/Y plot. Plots utilizing silica and total alkalies (Figures 9 and 10) differ in that three of the eight samples (21111, 21113 and 21114) lie well within the alkaline fields. This discrepancy may support the mobility of K₂O and Na₂O, and demonstrate their enrichment during carbonatization, sericitization and albitization.

All the rocks are quite strongly carbonatized, with a very large proportion of the total loss on ignition being related to the content of CO₂ (Figure 11). The porphyry samples (21115 and 21116) are lower in CO₂ and display higher LOI/CO₂ ratios, likely reflecting more abundant sericite and chlorite in these rocks and a less intense degree of carbonatization.

Pearson Coefficients of Correlation for gold and related pathfinder elements are presented in Figure 12. Gold correlates moderately strongly with copper (Figure 16), silver (Figure 17), tungsten (Figure 18) as well as with CO₂, molybdenum and strontium. It is interesting to note the fairly strong *negative* correlation between gold and K₂O (-0.59), gold and arsenic (-0.43) and between CO₂ and K₂O (-0.68) (Figure 13); these negative correlations are unusual for gold related alteration systems. CO₂ and copper are quite strongly correlated (0.80) (Figure 14), as are K₂O - Rb (0.99)(Figure 15) and K₂O - Ba (0.97). The latter two correlations likely relate to the presence of barium-bearing muscovite-sericite in varying abundance in the rocks. The quite strong correlation between nickel and arsenic (0.83) (Figure 19) may result from both these elements now residing within the structure of pyrite - an ubiquitous mineral in the rocks sampled.

D. R. Luke.

1996 Geochemical Analyses

Diamond Drill Hole MJ-86-06, Mountjoy Township

<u>Sample Number</u>	<u>Description</u>
21109	Komatiite?, carbonatized, sericitized, medium grey brown in colour, 3-5% pyrite grains to 2-3 mm in size.
21110	Basalt, medium grey brown, well foliated, carbonatized, Mg-tholeiite?, 1% coarse euhedral pyrite grains to 3-4 mm.
21111	Medium grey brown, fine grained, well foliated mafic volcanic; 2-3% coarse pyrite blebs to 3-4 mm.
21112	Komatiite, highly carbonatized, grey green brown in colour; talc-sericite and carbonate altered. Trace pyrite.
21113	Komatiite; carbonatized, medium-fine grained, medium grey brown in colour, 10-15% talc?, 3% coarse (3-5 mm) pyrite.
21114	Komatiite; medium dark green, carbonatized, 1-2% coarse (3-4 mm) pyrite, trace chalcopyrite.
21115	Feldspar porphyry, light grey, massive, minor wispy green carbonate inclusions.
21116	Breccia zone at contact between feldspar porphyry and possible komatiite.

Credits you are claiming in this report may be cut back. In order to minimize the adverse effects of such deletions, please indicate from which claims you wish to prioritize the deletion of credits. Please mark (✓) one of the following:

- Credits are to be cut back starting with the claim listed last, working ' backwards.
- Credits are to be cut back equally over all claims contained in this report of work.
- Credits are to be cut back as prioritized on the attached appendix. *cut back from P568931*

In the event that you have not specified your choice of priority, option one will be implemented.

Note 1: Examples of beneficial interest are unrecorded transfers, option agreements, memorandum of agreements, etc., with respect to the mining claims.

Note 2: If work has been performed on patented or leased land, please complete the following:

I certify that the recorded holder had a beneficial interest in the patented or leased land at the time the work was performed.	Signature	Date

Statement of Costs for Assessment Credit

Transaction Number (Office Use)

Information collected on this form is obtained under the authority of subsection 8(1) of the Assessment Work Regulation 6/96. Under s. 8 of the Mining Act, the information is a public record. This information will be used to review the assessment work and correspond with mining land holder. Questions about this collection should be directed to the Chief Mining Recorder, Ministry of Northern Development and
8th Floor, 833 Ramsey Lake Road, Sudbury, Ontario, P3E 6B5.

Applications of Filling Discounts:

Work filed within two years of performance is claimed at 100% of the above Total Value of Assessment Work. Work filed after two years and up to five years after performance, it can only be claimed at 50% of the Total Value of Assessment Work. If this situation applies to your claims, use the calculation below:

GTAI VALUE OF ASSESSMENT WORK

x 0.50 =

Total \$ value of worked claimed.

3: _____ is not eligible for credit.

3: Work older than 5 years is not eligible for credit. The recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

Classification verifying costs:

DALE Pyke (please print full name), do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on accompanying Declaration of Work form as AGENT (recorded holder, agent, or state company position with signing authority) I am authorized to make this certification.

Dear Mr. White:

**SUBJECT: APPROVAL OF ASSESSMENT WORK CREDIT ON MINING LAND, CLAIM(S)
N1/2 LOT 8, CON IV IN MOUNTJOY TOWNSHIP**

Assessment work credit has been approved as outlined on the Declaration of Assessment Work Form accompanying this submission. The credit has been approved under Section 17, Assay, of the Assessment Work Regulation.

The approval date is August 27, 1996. Please indicate this approval on the claim record.

If you have any questions regarding this correspondence, please contact Steven Beneteau at (705) 670-5855.

Yours sincerely,
