							Assays						
From	To	Description	Sample #	From	To	Length (meter)	Cu ppm	Ni ppm	Co ppm	Pt ppb	Pd ppb	Rh ppb	Au ppb
0.0	24.5	Overburden											
24.5	104.3	Gabbro -medium to coarse grained, medium to locally dark grey green, massive. Unit is quite competent with only minor fractured sections. There are only small sections of weak bleaching <10 cm in length. The crystals are diffuse with rare feldspars with well defined edges. 54.0-67.9m -feldspars are more developed, unit has a mottled appearance, there are small epidotitic silica veins and small carbonate veins at high angles to core axis 75-85°. Sulfides are trace pyrite, possible pyrrhotite. This maybe a quartz gabbro. 101.2-101.3m -minor grains of chalcopyrite, pyrrhotite 103.0-104.3m -fine grained, possible andesite "layer", massive with minor feldspars. Upper contact gradational. Lower contact fairly sharp at 35° to core axis. There is minor pyrrhotite associated with the andesite especially near upper contact.											
104.3	110.2	Gabbro -fine to coarse grained, dark grey green to whitish in feldspar accumulates. This section is disrupted with a crude layering as feldspar accumulates and dark green finer layers possible chlorite and medium green fine layers andesitic in appearance. There are minor sulfides associated with the contacts there are nodule like quartz, white milky to <0.5 cm.											
110.2	140.6	Gabbro -fine to medium grained, medium to dark grey green with finer feldspars <1 mm in size but abundant. There are minor fine grained sections <10 cm in size with minor feldspar. Sulfides of pyrrhotite and minor chalcopyrite were noted from 111.2-112.0m. There are minor quartz veins, milky white 5 cm wide at 40° to core axis. There is a band of andesite											

Diamond Drill Log

Hole # EL25-09

From	To	Description	Sample #	Assays From	To	Length (meter)	Cu ppm	Ni ppm	Co ppm	Pt ppb	Pd ppb	Rh ppb	Au ppb
		from 118.45-118.75m with contacts 90° to core axis, sericitic green. Fragments of andesite were noted 119.6m, 2cm x 1cm, porphyritic. 120.9-122.7m -Gabbro becomes finer grained, feldspars are smaller but abundant. 122.7-123.9m -Andesite -fine grained, pale green grey with amygdules of feldspar and dark quartz(silica). Feldspars are small but the silica can be up to 2mm in diameter. There are also dark silica filled fractures towards the end of the unit. Upper contact 44° to core axis, fairly sharp, lower is 85°, sharp, with feldspar accumulate in gabbro at contact. 125.5-127.2m -Andesite -similar to above. Upper and lower contacts 38° to core axis, feldspars in gabbro as accumulates at both contacts. 130.4-134.7m Andesite -fine to medium grained, local gabbro in bands, medium to dark green with white feldspars to pale green saussauritized, minor pale green epidote coloured sections. There is a grey siliceous section at upper contact to 131.0m with contact 40° to core axis. 136.0-138.1m -Andesite as above with gabbroic appearance locally.											
140.6	148.2	Andesite -fine to medium grained, medium to dark green as above. There maybe some crude layering in the unit with feldspar poor and feldspar rich sections, There is patchy alteration as bleaching and probable epidote in veins. The unit maybe a finer gabbro.											
148.2	168.8	Gabbro medium grained becoming coarser down section, medium grey to grey green with local feldspar accumulates. The unit is massive except as noted below. 149.7-150.3m -quartz veining and graphite. Milky white quartz veins and calcite "interbedded" with graphite, highly conductive. Upper contact 50° and lower at 40° to core axis. There is some graphite staining in the gabbro for <0.5cm at each contact. 157.5-18-58.9m -fine grained, medium green grey possible andesite with gabbroic sections. 161.1-161.9m -fine grained, medium to dark grey andesite with minor quartz carbonate veins. Upper and lower contacts at 45° to core axis. There are pink feldspathic sections from 165.5-167.2m as grains and small fracture fillings. The lower contact of the gabbro at 168.8m has a feldspar vein accumulate <0.5cm wide, white. Lower contact 53° to core axis.											
168.8	185.2	Andesite -fine to medium grained. Medium to dark green grey to mottled with feldspar, possible gabbroic sections. Gabbro sections range from 10cm to 1m, medium to coarse grained, grey green in colour. The andesite is moderately siliceous. 168.8-174.0m -upper part of the unit has variable alteration or is brecciated with paler green "fragments" to 3cm and local mottled textures.	52520	174.25	174.6	0.35	17	52	5	<5	<5		29

Diamond Drill Log

Hole # EL25-09

From	To	Description	Sample #	Assays From	To	Length (meter)	Cu ppm	Ni ppm	Co ppm	Pt ppb	Pd ppb	Rh ppb	Au ppb
		174.25-174.6m -black layer of andesite with minor carbonate veining. This section has a tan brown mineral which is as grains and one fine laminae. The laminae is conductive. This mineral appears like honey sphalerite but should not be conductive. 174.6-181.6m -andesite mixed with gabbro with some sections of the andesite having a mottled appearance with feldspars maybe porphyritic or re-crystallized. There is variable alteration in the lower part of the unit giving a fragmental appearance as above. 181.6-182.9m -Gabbro -forms contacts 75° upper and 85° lower to core axis.											
185.2	233.2	Gabbro -medium to coarse grained, medium grey green, massive. Unit has mottled appearance in areas of feldspar accumulations. There are small <5cm wide fine grained "veins", infrequent. There is more abundant quartz in this unit, maybe a quartz gabbro. Near upper contact there are minor carbonate veins and minor pink feldspars locally associated with carbonate veining. 194.9-198.3m -Andesite -fine grained, medium to dark green massive. The contacts are at low angles to the core axis 15° with quartz/feldspar in veins <0.4cm wide. The upper contact has a silicified zone 5cm wide, light to medium grey, hard, very fine grained. Lower contact is bleached and weakly siliceous. The main unit is weakly siliceous. 198.3-204.8m -there are several quartz filled laminae veins in this section, light grey, hard, sub-parallel to core axis and 60° to core axis. 204.8-207.4m -gabbro becomes finer grained, medium grey to grey green with saussauritized feldspars. This section contains a mustard yellow "silicate" mineral which is abundant from 205.2-205.9, 3-5%. Remainder of section <1%. Upper and lower contacts are gradational. 207.4-233.2m -Gabbro -medium green grey, massive coarse grained mainly. There are local quartz veins especially between 221.7-228.3m. Quartz occurs as "flooded" areas and as veins <1cm wide, sub-parallel to core axis. There is minor chalcopyrite associated with the quartz at 228.3 and 229, minor chlorite.											
233.2	235.6	Andesite -fine grained, medium green, moderately siliceous forms low angles to core axis 20° upper and lower. There is a chilled margin at the upper contact. Chilled margin is less pronounced at lower contact.											
235.6	272.3	Gabbro -altered, mineralized, the gabbro in this section is highly variable in grain size and colour. The unit varies from fine grained dark green to coarser grained bleached whitish with local areas of feldspar accumulates. 235.6-238.0m -section starts with coarse gabbro becoming finer grained to medium grained, dark green, possibly chloritic. Very minor sulfides.											

Diamond Drill Log

Hole # EL25-09

From	To	Description	Sample #	From	To	Length (meter)	Assays Cu ppm	Ni ppm	Co ppm	Pt ppb	Pd ppb	Rh ppb	Au ppb
		238.0-240.6m -dark green with feldspar patches, chloritic, weakly mineralized.	52521	238.0	239.2	1.2	30	83	13	<5	<5		10
		240.6-243.6m -light grey, whitish with local fine grained, medium grey sections. Sulfides of pyrrhotite and chalcopyrite, 3% to local 5% as clots and fine disseminations. Chalcopyrite <1% as exsolutions in pyrrhotite and as individual grains.	52522	239.2	240.6	1.4	269	161	64	<5	<5		15
			52523	240.6	241.8	1.2	1480	1210	73	27	75		31
			52524	241.8	243.6	1.8	98	212	30	14	27		15
		243.6-245.6m -similar to above except the sulfides increase to 5-8%, possible 10% locally as large clots to 1cm pyrrhotite with chalcopyrite <1% as grains and exsolutions.	52525	243.6	244.6	1.0	2580	1540	115	29	194		17
			52526	244.6	245.6	1.0	1910	2050	146	55	271		10
		245.6-147.8m -gabbro -medium grained, defined feldspars and 1-3% sulfides of pyrrhotite, minor pyrite and chalcopyrite <0-5%.	52527	245.6	246.8	1.2	541	1170	84	27	171		3
			52528	246.8	247.8	1.0	380	561	72	27	62		7
		247.8-249.3m -fine grained, medium to dark grey with fine disseminations of pyrrhotite. Lesser pyrite and <0.5% chalcopyrite. Total sulfides 5%.	52529	247.8	249.3	1.5	2770	1890	141	29	175		14
		249.3-250.1m -Gabbro -medium to coarse grained, medium grey green, feldspar saussauritized, <1% sulfides.	52530	249.3	250.1	0.8	614	462	51	<5	41		2
		250.1-251.7m -Gabbro as above but sulfides of pyrrhotite, pyrite and chalcopyrite total 10% plus. The pyrrhotite is most abundant with pyrite occurring mainly as fracture fillings to form laminae to 3mm wide. Chalcopyrite <1% as exsolutions and individual grains.	52531	250.1	251.7	1.6	3810	3370	198	48	266		106
		251.7-261.2m -medium grained gabbro with white feldspars abundant but smaller than normal 1-3mm in size. The unit is quite dark, green grey to medium grey green. Sulfides are minor pyrrhotite near upper contact mainly.	52532	251.7	253.1	1.4	697	952	90	22	117		10
			52533	253.1	254.5	1.4	111	356	41	<5	36		10
		261.2-270.7m -medium to coarse grained, darker green with increased mafic component approaching pyroxenite. There are minor quartz veins white to grey. There is minor mineralization around 265.0m and the core is broken to crushed from 265.6-267.6m.	52534	258.0	259.5	1.5	64	163	33	<5	<5		nil
		270.7-272.3m -as above with 1-3% sulfides of pyrrhotite, pyrite, chalcopyrite. Sulfides are up to 5% towards lower contact.	52535	270.7	272.3	1.6	731	1230	103	15	106		nil
272.3	279.0	Andesite -fine grained, light to medium green grey, amygduloidal to porphyritic with white feldspars to 2mm in size. There is minor pink feldspar associated with some quartz veining. Quartz carbonate veining is minor. There is weak mineralization to 273.2m.	52536	272.3	273.3	1.0	630	248	64	43	51		nil
	279.0	End of Hole

6. Instructions for cutting back credits that are not approved.

Some of the credits claimed in this declaration may be cut back. Please check (✓) in the boxes below to show how you wish to prioritize the deletion of credits:

- ■ 1. Credits are to be cut back from the Bank first, followed by option 2 or 3 or 4 as indicated.
- ■ 2. Credits are to be cut back starting with the claims listed last, working backwards; or
- ☐ 3. Credits are to be cut back equally over all claims listed in this declaration; or
- ☐ 4. Credits are to be cut back as prioritized on the attached appendix or as follows (describe):

Note: If you have not indicated how your credits are to be deleted, credits will be cut back from the Bank first, followed by option number 2 if necessary.

MINING LANDS SECTION
PORCUPINE MINING DIVISION

Note:
- Work older than 5 years is not eligible for credit.
- A recorded holder may be required to verify expenditures claimed in this statement of costs within 45 days of a request for verification and/or correction/clarification. If verification and/or correction/clarification is not made, the Minister may reject all or part of the assessment work submitted.

Certification verifying costs:

I, Lionel Bonhomme Agent, do hereby certify, that the amounts shown are as accurate as may reasonably be determined and the costs were incurred while conducting assessment work on the lands indicated on the accompanying Declaration of Work form as Agent. I am authorized to make this certification.

Dear Sir or Madam:

Submission Number: 2.20805

Subject: Transaction Number(s):		**Status**
	W0060.00498	Approval

We have reviewed your Assessment Work submission with the above noted Transaction Number(s). The attached summary page(s) indicate the results of the review. WE RECOMMEND YOU READ THIS SUMMARY FOR THE DETAILS PERTAINING TO YOUR ASSESSMENT WORK.

If the status for a transaction is a 45 Day Notice, the summary will outline the reasons for the notice, and any steps you can take to remedy deficiencies. The 90-day deemed approval provision, subsection 6(7) of the Assessment Work Regulation, will no longer be in effect for assessment work which has received a 45 Day Notice. Allowable changes to your credit distribution can be made by contacting the Geoscience Assessment Office within this 45 Day period, otherwise assessment credit will be cut back and distributed as outlined in Section #6 of the Declaration of Assessment work form.

Please note any revisions must be submitted in DUPLICATE to the Geoscience Assessment Office, by the response date on the summary.

If you have any questions regarding this correspondence, please contact JIM MCAULEY by e-mail at james.mcauley@ndm.gov.on.ca or by telephone at (705) 670-5858.

Yours sincerely,

Lucille Jerome
