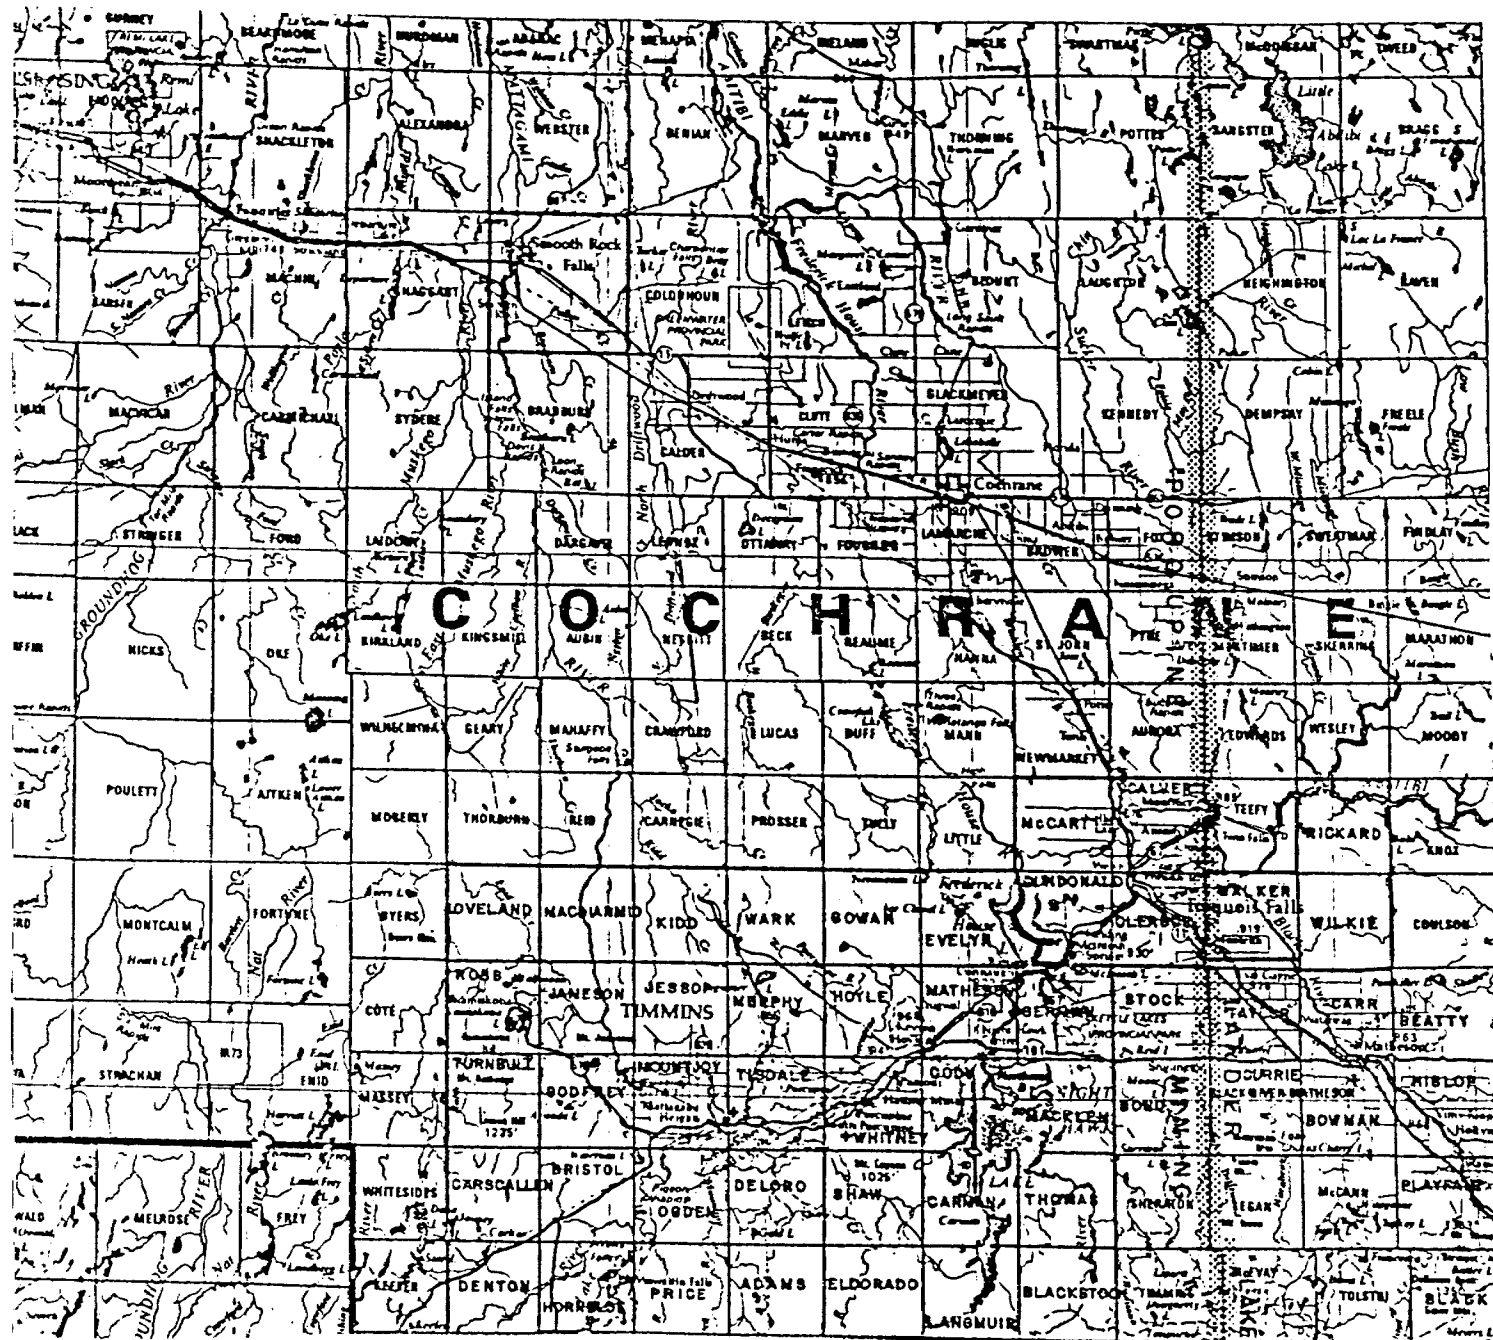

FIG 1: GENERAL LOCATION MAP  
 (●) PROPERTY

## INTRODUCTION

The purpose of this brief report is to document the progress on trenching and sampling carried out on the Harrington gold occurrence to fulfill assessment requirements. This author has only recently become involved with this project and has not visited the property. Details on work carried out have been provided by the prospector C. Harrington. Geological descriptions have been taken from field notes given to Mr Harrington by corporate geologists who have visited the subject property. Such companies included Falconbridge Exploration and Rio Algom Exploration.

## PROPERTY LOCATION & ACCESS

The property presently consists of three contiguous claims numbered 1155087, 1132988, and 1132989 located in the N 1/2 of Lot 8, Con III Godfrey Twp. (See Fig 142).

Access to the property is obtained by driving west of Timmins along Highway 101 to Highway 576. At Highway 576 one turns north and continues to the Kam-Kotia club road; one then proceeds along this road to the ski club.

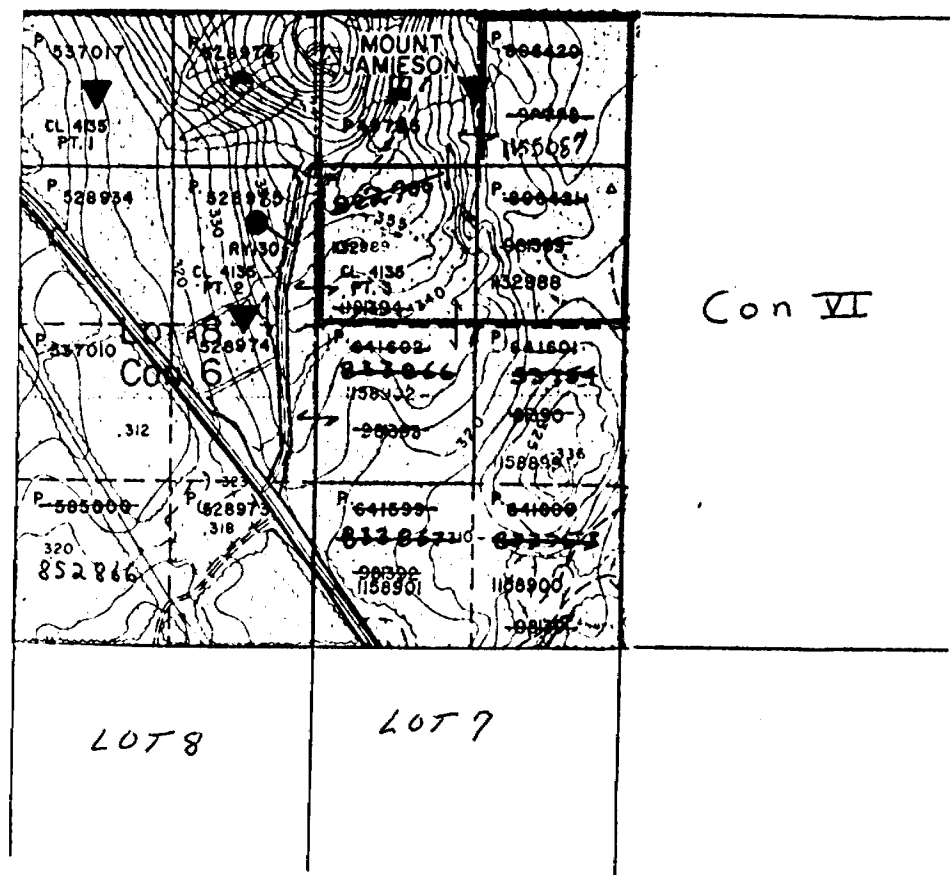

Fig #2 : CLAIM LOCATION MAP  
(-) PROPERTY

From there the claim group is accessible via a short trail.

### PROPERTY HISTORY

Over the years a few companies have owned this prospect but all documented exploration work appears to have been related to base metal exploration. No drilling of any sort has been done for gold and no drilling has been carried out on the new Harrington occurrence except for a hole by C. Harrington. This hole was drilled in an attempt to reach the vein. However, it had to be abandoned due to blocky ground & stuck rods, prior to intersecting the vein. This core will be logged at a later date and the results of this work presented in a future report.

### ECONOMIC GEOLOGY & WORK REPORT DISCUSSION

As stated previously the author has not visited this prospect to date. Data on the prospect has been supplied by Mr. Harrington's notes & from rough field notes from company geologists which Mr. Harrington also possessed.

The occurrence is located on claim 1132989 approximately 100m south of the number one

post (Fig#3). All work to date has been concentrated on the main occurrence and no other work has been done on other portions of the block.

Sketches show that the vein strikes at roughly  $335^{\circ}$  Az and the dip is estimated to be  $15^{\circ}$  SW. Rough notes from Falconbridge exploration state that the occurrence consists of a well mineralized quartz vein ranging in thickness from 10cm to 50cm. Mineralization in the vein consisted of sphalerite, chalcopyrite, galena & pyrite. From personal communication with Falconbridge geologists it appears that the vein is within a break within a package of felsic volcanics. Rio Algom geologists field notes mention that there is some brecciation associated with the vein contact and fine pyrite is present. An assay from Rio Algom on this contact assayed 0.42oz/ton Au. Also a sample of vein material once again from Rio Algom assayed 0.31oz/ton Au. This vein is reported to exist intermittently over a strike length of roughly 100'.

Work to date has consisted of trenching and sampling of the main gold occurrence. Initially a 3.96m trench was blasted along the vein. (previously reported) Since that time the initial trench has been deepened & extended 15m

along strike and a second trench 3m long has been blasted a short distance north of the original trench.

A number of samples by Mr Harrington (grab samples) were taken from the main trench and also by Falconbridge & Rio Algom & a government geologist. Results for Au, Ag, Cu, Pb, Zn were variable. The ranges for these elements are as follows. Original assay sheets for all samples are given in Appendix I

Au RANGE	150 pph	to	0.42 oz / ton Au
Ag RANGE	nil	to	2.38 oz / ton Ag
Cu RANGE	0.0042	to	0.142 Cu
Pb RANGE	0.0032	to	0.382 Pb
Zn RANGE	0.0022	to	0.142 Zn

As stated previously upon completion of trenching an attempt was made to diamond drill the vein unsuccessfully due to ground conditions. A separate report will later document the rock found on the hanging wall of the vein.

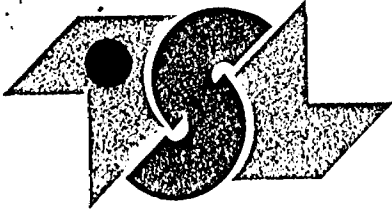

## Conclusions & Recommendations

In light of reasonably encouraging gold values on this prospect a limited follow up program should be considered for this claim group. Such a program should consist of:

- 1) A control grid establishment over the three claims
- 2) Carry out a prospecting program over the area to locate any other zones of interest
- 3) Carry out limited geophysics i.e. MAG, and VLF
- 4) Continue trenching the main zone to follow the system as far as possible
- 5) Carry out a thorough chip sampling program on the vein

Respectfully Submitted

Dear Sir:

RE: Approval of Assessment Work on mining claims P 1132989 in Godfrey Township.

The Assessment Credits for Assaying, section 17 of the Mining Act Regulations, as listed on the original Report of Work, have been approved as of JUNE 11, 1992.

Please indicate this approval on the claim record sheets.

If you have any questions please call Clive Stephenson at (705) 670-7251.

Yours sincerely,

Ron C. Gashinski  
Senior Manager, Mining Lands Branch
