### 1.0 INTRODUCTION

A magnetometer survey was carried out on 55 claims in Reid Township, Timmins, Ontario (Figures 1 and 2; Table I). Northwest Geophysics Ltd., of Thunder Bay, Ontario, carried out the survey on 37 claims, as well as portions of 7 claims during March to June, 1980. Geoex Ltd., of Timmins, Ontario, performed the magnetometer survey on 11 claims during September to October, 1980, as well as completing the coverage on the 7 claims that were only partially surveyed by Northwest Geophysics Ltd.,

All the claims are held by Gulf Minerals Canada Limited.

2.0 ACCESS

The property is accessible from Timmins via highway #655 and Abitibi Paper camp's 40 all-weather roads. The road through the grid is only driveable during the winter months, however, it is possible to drive to the southern part of the grid throughout the year.

3.0 GEOLOGY

Unfortunately, due to the scarcity of outcrops, the geology is not well known.

The area covered by the magnetometer survey is considered to be two east-west trending rhyolite bands flanked on both sides by mafic volcanics. Several ultramafic horizons are thought to be present.

#### 4.0 SURVEY METHOD

##### 4.1 Northwest Geophysics Ltd.

The magnetic survey was carried out with a Scintrex MF-2 fluxgate magnetometer. To maintain magnetic control, a central base station was selected (500 gammas); base lines, tie lines, and cross lines were surveyed. All grid readings were relative to the base line, tie line intersections. Drift corrections were then made if necessary.

Approximately 52 miles of line, cut at 400 foot intervals and oriented northeast were surveyed. Readings were taken at 100 foot intervals throughout; however, in anomalous areas, the readings were taken at either 25 or 50 foot intervals.

##### 4.2 Geoex Ltd.

The magnetic survey was carried out with a Geometrics Proton magnetometer. A base station with an arbitrary value of 59,000 gammas was set up for magnetic control. Base lines and cross lines were surveyed and all readings were relative to the base line intersections. Drift corrections were made if necessary.

Approximately 23 miles of line cut at 400 foot intervals and oriented northeast were surveyed. Readings were taken at 100 foot intervals throughout.

## 5.0 RESULTS

### 5.1 Area Surveyed by Northwest Geophysics Ltd.

The magnetic relief throughout the area is generally relatively flat, however, several moderate narrow and linear magnetic highs trending either east-west or northwest-southeast are present. Following are the dominant magnetic anomalies: L24E-52+00N intermittently to L16W-52+00N, L4W-25+00N to L24W-15+00N, and L28E-6+00S to L20E-4+00N. A magnetic anomaly trending from L8W-30+00S to L52W-17+00N, varies in width and intensity. The anomaly is narrow and sharp at the northwest end, whereas it is wider and not nearly as well defined at the southeast end. These magnetic anomalies are probably diabase dykes.

### 5.2 Areas Surveyed by Geoex Ltd.

This survey is the southern extension of the grid that was covered by Northwest Geophysics Ltd.

The magnetic relief is fairly flat with occasional highs. A dominant narrow magnetic anomaly trends east-west from L72E-47+00S to L60E-48+00S, L52E-48+00S to L48E-45+00S, a localized high at L20E-45+00S and from L12E-46+00S to L4E-47+00S. This may represent an ultramafic horizon.

A narrow linear anomaly trends from south of L48E-34+00S to L44E-30+00S. A similar anomaly occurs from L56E-54+00S to L58E-60+00S. These anomalies are probably due to diabase dykes.

Increased magnetic relief is evident at the west end of the grid, and possibly it indicates an ultramafic horizon.

Geoex Ltd., also surveyed lines 4E, 8E, 12E, and 16E, between BL 0+00 and TL 25+00N. This area occurs within the area surveyed by Northwest Geophysics Ltd., however, a minor amount of repetition occurs on the end of the lines.

The magnetic expression is flat with a higher than background northwest to southeast trend occurring from L16E-7+00N to L4E-12+00N. A magnetic depression within this trend occurs on L8E from 10+00N to 14+00N, however, the values are still higher than the general background.

The main linear feature is a continuation of a magnetic anomaly described from the data of Northwest Geophysics Ltd.

#### 6.0 RECOMMENDATIONS

An electromagnetic survey should be carried out over the entire grid to determine whether or not any electromagnetic conductors occur on the property.

P. D. Robinson  
Feb. 4, 1982

**Gulf Minerals Canada Limited**

**APPENDIX I**

**TECHNICAL DATA STATEMENTS**

**Gulf Minerals Canada Limited**

**APPENDIX I**

**Technical Data Statements**

The technical data statements contain the pertinent information.

Tables II and III list the claims for which assessment credits are being applied. The report encompasses two adjacent magnetometer surveys carried out by two independent contractors. Therefore, several of the claims are listed on Tables II and III, however, the number of days being applied for on these claims appears only on Table III.

This report constitutes a credit of 40 days per claim of assessment work, however, since only 80 days of geophysical work per claim is accepted 25.4 days of assessment credit per claim is being applied for.

Dear Sir

We have received reports and maps for a Geophysical (Magnetometer) survey submitted under Special Provisions (credit for Performance and Coverage) on mining claims P 506401 et al in the Township of R&id.

This material will be examined and assessed and a statement of assessment work credits will be issued.

Yours very truly

## MINING LANDS SECTION

Mr. Fred W. Matthews,  
Ministry of Natural Resources,  
Room 6450,  
Whitney Block,  
Queen's Park,  
Toronto, Ontario

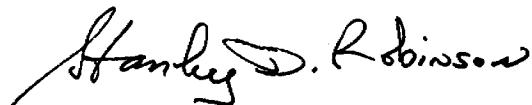

Dear Mr. Matthews:

Enclosed herewith are two copies of a magnetometer survey dated Feb., 1982, performed by Northwest Geophysics Limited (Thunder Bay, Ontario), and Geoex Limited, (Timmins, Ontario), for Gulf Minerals Canada Limited (Toronto, Ontario), on property in Reid Township. A property location map and Technical Data statement are included in each copy of the report.

The above mentioned report is being filed in duplicate by the undersigned for 1,397 days of assessment credits to be distributed as outlined in Tables II and III of Appendix I in the report.

Would you please acknowledge receipt of the report and address all correspondence to the undersigned.

Yours truly,

Stanley D. Robinson  
Project Geologist
