FROM TO	ROCK TYPE	TEXTURE AND STRUCTURE	ANGLE TO CA	ALTERATION	MINERALIZATION	REMARKS
0.00 TO 69.27	Casing «┤ob├»					- casing pulled.
69.27 TO 86.18	Mafic Volcanic «2,b,m,<Ep>»	- dark green. - medium grained to locally fine grained. - massive to weakly foliated at 55-80°/ca. - homogeneous texture. Variations are a result of alteration (40% of interval). - cut by 0.5-1 cm, pink, hornblende-porphyritic granitic veinlets. - downhole contact is sharp, strongly foliated for the last 20 cm with hornblende augen(?).		- epidote alteration in 2-15 cm wide zones as fine veinlets with trace sulphides. These zones are usually moderately to strongly foliated at 60-70°/ca. - cut by rare, late fracture-controlled carbonate veinlets, in turn cut by diffuse, dark green and grey, chlorite + epidote + dark grey carbonate veins, locally hematite stained. - locally fracture-controlled veinlets have up to 1 cm weakly bleached alteration halos.	- 0.1%, fine disseminated pyrite. - 0.5%, fracture-controlled pyrrhotite. - epidote-altered zones contain up to 2% pyrite with lesser pyrrhotite and trace chalcopyrite.	
86.18 TO 179.00	Mafic Intrusive «7,b,c,T»	- medium to dark green with pale pink and white. - medium to coarse grained. - massive, typically porphyritic. - moderately hard, weakly magnetic. - 25-35%, 2-3 mm, subhedral to euhedral, dark green, hornblende. - matrix is very fine grained, pale pink to white, and felsic. - overall textures are variable. - both leucocratic and melanocratic phases. - fine grained zones and pockets (1%), locally resemble diffuse fragments of 3cm x 10cm. - intervals where felsic minerals are medium grained with up to 30%, 2 mm, rectangular, pale pink and white feldspar phenocrysts and/or 5%, anhedral, purple-stained, dark grey quartz. - 128.80-130.45m - interval with 60%, fine grained, medium green mafic dykes cut core randomly. ╢149.0-149.15m╟ «Fault Zone» - pale grey, dense clay fault gouge. Contact at 75°/ca, weakly mylonitic, 1 cm into rock. - finer grained intervals at 152.5-155m and 155.4-157.4m are brown green and typically still hornblende porphyritic.		- 2-10mm, grey quartz veins with associated k-spar (or hemetite) + epidote ± carbonate + pyrite veins - rare, weak, pervasive carbonate alteration. - fine chloritic(?) veinlets cut core, are fabric destructive and often weakly foliated at high angles to core axis. - pale pink, transluscent quartz vein at 169.84-170m. Up to 1% similar 0.5-1 cm wide veinlets scattered throughout interval.	- trace to 0.5% disseminated pyrite. - up to 2% disseminated pyrite commonly associated with all alteration types.

C.A. Petch

FROM TO	ROCK TYPE	TEXTURE AND STRUCTURE	ANGLE TO CA	ALTERATION	MINERALIZATION	REMARKS
0.00 TO 51.50	Casing «┤ob├»					- 54 metres of BW casing left in hole.
51.50 TO 129.15	Mafic Volcanic «2,a,m,p?»	- medium green to grey-green. - fine to medium grained. - massive to weakly foliated (various orientations). - locally weakly porphyritic with up to 2%, 1mm, fine, white feldspar(?) laths. - moderately hard with chlorite-altered intervals only slightly softer. - 60.25m - first appearance of 20%, 1-2mm, rounded, hazy white spots. - locally, zones of chlorite alteration resemble pillow selvedges as edges are diffuse and locally have a spotty texture that are possible varioles. - medium grained and or spotty interval in 80% of interval. - local dark grey-green, fine grained, homogeneous intervals (may be a tuff) are cut by 1mm, irregular chlorite-filled fractures. - local framboid white spots up to 1 cm in size appear be composed of a fine grained mixture of calcite (red stain) and quartz (vitreous, grey). Locally coalesce. - 66.4m - 4 cm 'fragment' has rounded but a well defined edge with a slightly irregular, 1cm, speckled white 'halo' around a dark green, fine grained center. This may be an alteration texture (diffuse fracture) or pillow remnant? - 87.25-87.40m - concentration of chlorite veinlets creating an in situ brecciated texture with 2-4 cm, rounded fragments. - 88m - 10 cm, rounded pillow with a 0.3 cm bleached rim with darker green, 'ashy' selvedge containing fine fracture-controlled carbonate + pyrrhotite + trace chalcopyrite. - 109m - well defined varioles are 3mm, rounded in clusters (not diffuse spots). - 111.9m - sharp discordant contact of medium grey flow/pillow against a dark forest green ashy interflow material(?). - 124m - widest occurrence of coarser grained(?) mafic with up to 2mm feldspar phenocrysts and 5		- local, pervasive olive brown carbonate alteration locally dolomitic (stains blue). - <1%, 1mm-wide carbonate veins (calcite, red stain). - spotty texture may be alteration or varioles or both. - up to 5% (increasing downhole) chlorite(?) alteration is fracture-controlled in 1mm to 2 cm-wide irregular fractures. Altered rock is a deep forest green and very fine grained. Often associated with white carbonate and trace to 2% sulphides. - 0.1%, hairline chlorite veinlets are irregular and often contain trace blebs of pyrrhotite. - rare, pale brown-green, fracture-controlled and patchy quartz ± epidote ± sericite alteration. - 90m - 3 cm-wide, pale brown, carbonate-rich halo with feathery edges around a 5 mm wide carbonate vein. - 93.2-93.7 - pervasive pale brown carbonate alteration fracture-controlled around the edges.	- 53-54m - 3%, fracture-controlled pyrite is partially weathered out (ground water) in 2-5 mm wide, irregular, bands of massive pyrite at 0-20°/ca. - trace fracture-controlled pyrrhotite and chalcopyrite are often associated with carbonate and almost always associated with chlorite alteration. This is the style of mineralization that becomes predominant in the downhole unit. - rare, finely disseminated chalcopyrite ± pyrrhotite. - pyrrhotite is magnetic and has purplish tinge suggesting it will contain nickel. - 106-107m - up to 1% pyrrhotite with trace chalcopyrite in stringers.	- 60.25m WR AT03096 to check spots (varioles or alteration?). Thin section MB-06. - 100.4m - WR AT03098 - possible pillow core. Spotty texture with 1% chlorite alteration and trace carbonate in veinlets with pyrrhotite and chalcopyrite. - 112.47m - WR AT03099 - fine grained, dark forest green sample with trace sulphides and feldspar veinlet. - 118.22m - fine to medium grained, medium to light grey dyke (?).

FROM TO	ROCK TYPE	TEXTURE AND STRUCTURE	ANGLE TO CA	ALTERATION	MINERALIZATION	REMARKS
		mm, irregular, dark green patches in more quartz-sericite or epidote(?)-rich patches (alteration or igneous inhomogeneity?). - 125.75-125.96m - 10cm of weakly banded, brownish-green interflow sediment with deformed quartz veining or cherty sediments. Brecciated by carbonate veins (40%) and contains trace pyrrhotite. - 127.5 - rare, 4 cm-wide, white and pale pink, medium grained feldspar cluster. - downhole contact approximate at increased density of chlorite alteration.				
129.15 TO 260.00	Altered Mafic Volcanic «2,a,Ch,Po»	- medium to dark green with green-grey. - fine grained to very fine grained in altered intervals. - weak to moderate foliation. Wisps of fracture-controlled mineralization are flattened. - coarse grained chlorite or pseudomorphed amphibole as up to 5 mm, tabular crystals at the cores of the wider chlorite-altered zones, locally with pyrrhotite and chalcopyrite. - lighter grey zones appear to derive much of their colour from pale grey, 1mm spots that occur between 10-60% in 2-30 cm wide patches Locally these zones are cut by chlorite veinlets also exhibiting the spotted texture. - widest chlorite-altered zones with typically up to 10% stringer/fracture-controlled pyrrhotite and trace to 0.5% chalcopyrite are at: - 132.2-133.6m and - 141.5-146.0m. - local hazy, darker green, fracture-controlled alteration of medium green, weakly altered(?) mafic. This texture is in turn cut by carbonate and sulphide veinlets. - rare, 0.5-1 cm, irregular clots of very fine grained, quartz+feldspar+epiodote mixture(?) only locally associated with carbonate and sulphides. - 141.5-142m - poorly constrained breccia zone with matrix of carbonate, chlorite, and 3% stringer pyrrhotite. Gradational boundaries. - 154.7-155.0m - 2-5 cm fragment-like zones of light grey spotted rock (alteration?). - after apx. 155m, grey 'fragments' in intervals		- rounded, 1-3mm, framboidal, white to light grey spots resembling varioles occur in 1 cm bands with spots concentrated at a base and diffusing away from it (alteration or pillow selvedge?). - chlorite alteration occurs as diffuse bands (may be pillow selvedges) and narrower well defined veinlets (as at 150m). - these alteration zones are hard, suggesting a later silicification event. - blue-grey, fine grained, transluscent, fracture-filling carbonate (calcite) is typically associated with the mineralization and is more common near uphole contact. - beige, pink-brown, fine grained felsic material in veins predominates over carbonate in downhole veining. Thin veinlets often cross-cut the diffuse pyrrhotite mineralization. - white carbonate fills rare, late 1-2 cm, sigmoidal tension gashes. - local chlorite on fracture surfaces. - after apx. 164m - the blue-grey carbonate in the chloritic intervals (with mineralization) may also contain trace epidote or sericite.	- 1-3% fracture-controlled pyrrhotite locally with carbonate and trace chalcopyrite and pyrite. Sulphides occur as stringers in the chlorite altered rock as well as in well defined late veins and fractures. - main mineralized zone is from apx. 130-148m and again at 210-215m containing intervals of up to 10% pyrrhotite and 0.5% chalcopyrite. - near top of interval sulphides occur in a very fine net texture around clasts that are 1-10mm in size, up to 2 cm. - chalcopyrite occurs with pyrrhotite as small blebs often concentrated at the tips of short dendritic fractures or along vein walls. - although mineralization decreases away from the main stringer zone (apx. 135m) it appears that chalcopyrite occurs in greater proportion to pyrrhotite in the peripheral zones (uphole of 128m and downhole of 150m). - 133.4m - zone of pyrrhotite + light grey material (quartz + epidote + sericite?). The light grey material occurs as 1-3mm blebs or balls with a rim of sulphides. On these rims chalcopyrite > pyrrhotite. - after 155m pyrite content increases	- unable to conclusively determine if unit is a series of altered pillowed and mafic flows with interflow sediments or a variable and strongly altered mafic volcanic or intrusive. - Gut feeling is that it is a mixture of the two.

FROM TO	ROCK TYPE	TEXTURE AND STRUCTURE	ANGLE TO CA	ALTERATION	MINERALIZATION	REMARKS
		have become much more homogeneous. - 173.6-175m - wide interval of >70%, dark forest green interpillow(?) or interflow sediments(?) with 3-15 cm-wide pale grey 'fragments', 'flows' or 'pillows'. - 176.68-176.8m - possible altered interflow sediment with moderate banding and weak foliation at 70°/ca. - 177.93-178.3m - beige to pale green felsic to intermediate dyke with 5%, dark green chlorite(?) and trace, white feldspar phenocrysts. Uphole contact is sharp at 80°/ca and very siliceous. The dyke becomes progressively greener downhole and has an irregular downhole contact. - after 191.9m - carbonate alteration intensifies (up to 10%). Spotty texture no longer observed, overall chaotic nature of core increases, 1% white quartz + feldspar + epidote patches appear. Rare green and light grey 'fragments' occur but hard to determine if alteration product or primary. - 194.8-195.15m - Fault Zone - dark grey-green, grungy with 1-2 cm, tightly packed, angular fragments with interstitial pyrite (5%) and carbonate. Fault may be responsible for surrounding increased carbonate alteration and fracturing. Also at 193.35-193.45m. - 196.80-196.83m - Fault Zone - sandy fault gouge and 30%, well rounded pebbles of mafic rock. Sharp contact at 60°/ca. - 209.97-211.96m - medium brown-green mafic dyke(?) with diffuse contacts is pervasively carbonate altered. At its core, has a 30 cm chlorite and feldspar porphyritic zone with 0.5mm, tabular, euhedral feldspars and subhedral chlorites. No carbonate is present at the core (WR AT03144). - 214.6m - 1 cm-scale, thinly laminated banding may mark the begining of another mafic unit that is slightly coarser grained and contains leucoxenes and <1mm, 1%, anhedral magnetite grains with white ilmenite(?) rims. - 233.56-233.83m - first of a series of fine grained, dark grey mafic dykes that are very weakly magnetic and homogeneous. Contacts are		- 182m - rare, 1-3mm, white to pale pink carbonate veins with a 1 cm, beige-bleached carbonate-rich alteration halo that cuts all fabrics. - 191-207m - interval of up to 10% carbonate in late, angular fractures. - 203-218m - mm to cm-scale patches of feldspar + quartz ± epidote have locally reappeared(?). - 214.6m - grungy, fractured core.	from rare to up to 2% (not observed in MAN55-02) disseminated with pyrrhotite and as smeared blebs on fracture surfaces. - 173-185m - 1-2cm, massive pyrrhotite mineralization associated with carbonate veins. Sulphides typically occur against one wall of the vein and finger outward towards the other side. - 186.6m - local 2 cm pyrrhotite swaths are net textured around sub-millimetre-sized, rounded fragments. - 189.4m - 3mm, late quartz-carbonate vein with 1% remobilized chalcopyrite and lesser pyrrhotite. - 193.5m - dark grey-brown magnetite intermixed with pyrrhotite up to 10%. Locally magnetite has white rims (ilmenite?). - 212.70-214.6m - 10% sulphides, net textured stringer pyrrhotite with trace chalcopyrite. Intermixed with pyrite and magnetite near base of interval. Also at 239m.	

FROM TO	ROCK TYPE	TEXTURE AND STRUCTURE	ANGLE TO CA	ALTERATION	MINERALIZATION	REMARKS
		sharp and at high angles to core axis. Also at 234.63-234.85m and 243.27-243.65m. - 240.0-240.65m - well developed breccia with 2-5 cm, medium green, irregular fragments with dark green, 2mm, altered rims in a medium grained, 'ashy' matrix with trace carbonate, up to 2% pyrrhotite with magnetite and trace chalcopyrite (flow top?). - 243.72-246.5m - tuff(?) foliated/well banded at 70°/ca with up to 3% pyrrhotite and trace chalcopyrite. ╣250.4-258.5╠ «7,a» - very fine grained, dark grey, contains trace blebs of pyrrhotite. Finer grained margins are similar in texture to surrounding mafic and contacts are diffuse. Flow or dyke? Dike may be slightly more chloritic at 257.4-258.5m. Mafic xenolith at 254.22-255.4m is moderately pervasively carbonate-altered and contains a 1 cm-wide stringer of 30% pyrrhotite and trace chalcopyrite + carbonate. - 257.15m - 30 cm-wide feldspar porphyritic interval with 2%, 1mm, beige feldspars and 0.5% <1mm, chlorites. Contacts are diffuse. - 258.5-260m - altered mafic with 5 mm wide chlorite alteration in bands at 80°/ca and 1-2% pyrrhotite mineralization as before (hornfelsed?).		- 216.5-218m - 3%, fine grained, cream-coloured patches contain 1-2 mm magnetite crystals.	- 1-2 cm pyrrhotite stringers or 2-5 cm net textured pyrrhotite patches with trace chalcopyrite and pyrite occur apx. every 1-1.5 metres to end of hole.

Credits you are claiming in this report may be cut back. In order to minimize the adverse effects of such deletions, please indicate from which claims you wish to priorize the deletion of credits. Please mark (✓) one of the following:

1. ☐ Credits are to be cut back starting with the claim listed last, working backwards.
2. ☐ Credits are to be cut back equally over all claims contained in this report of work.
3. ☒ Credits are to be cut back as priorized on the attached appendix. P1200910

In the event that you have not specified your choice of priority, option one will be implemented.

Note 1: Examples of beneficial interest are unrecorded transfers, option agreements, memorandum of agreements, etc., with respect to the mining claims.

Note 2: If work has been performed on patented or leased land, please complete the following:

I certify that the recorded holder had a beneficial interest in the patented or leased land at the time the work was performed.	Signature	Date

Statement of Costs for Assessment Credit

État des coûts aux fins du crédit d'évaluation

Mining Act/Loi sur les mines

Transaction No./N° de transaction: W9660.00577

Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used to maintain a record and ongoing status of the mining claim(s). Questions about this collection should be directed to the Provincial Manager, Minings Lands, Ministry of Northern Development and Mines, 4th Floor, 159 Cedar Street, Sudbury, Ontario P3E 6A5, telephone (705) 670-7264.

Les renseignements personnels contenus dans la présente formule sont recueillis en vertu de la Loi sur les mines et serviront à tenir à jour un registre des concessions minières. Adresser toute question sur la collece de ces renseignements au chef provincial des terrains miniers, ministère du Développement du Nord et des Mines, 159, rue Cedar, 4e étage, Sudbury (Ontario) P3E 6A5, téléphone (705) 670-7264.

1. Direct Costs/Coûts directs

Type	Description	Amount Montant	Totals Total global
Wages Salaires	Labour Main-d'oeuvre	1200	
	Field Supervision Supervision sur le terrain	600	1800
Contractor's and Consultant's Fees Droits de l'entrepreneur et de l'expert-conseil	Type DRILLING	25436	
	ASSAYING	2274	
			27710
Supplies Used Fournitures utilisées	Type		
Equipment Rental Location de matériel	Type		
		Total Direct Costs Total des coûts directs	29510

2. Indirect Costs/Coûts indirects

** Note: When claiming Rehabilitation work Indirect costs are not allowable as assessment work.
Pour le remboursement des travaux de réhabilitation, les coûts indirects ne sont pas admissibles en tant que travaux d'évaluation.

Type	Description	Amount Montant	Totals Total global
Transportation Transport	Type [illegible]	150	
	[illegible]	50	
	GAS	75	
			275
Food and Lodging Nourriture et hébergement	[illegible]	356	356
Mobilization and Demobilization Mobilisation et démobilisation			
		Sub Total of Indirect Costs Total partiel des coûts indirects	631
		Amount Allowable (not greater than 20% of Direct Costs) Montant admissible (n'excédant pas 20 % des coûts directs)	
		Total Value of Assessment Credit (Total of Direct and Allowable Indirect costs) Valeur totale du crédit d'évaluation (Total des coûts directs et indirects admissibles	30141

Note: The recorded holder will be required to verify expenditures claimed in this statement of costs within 30 days of a request for verification. If verification is not made, the Minister may reject for assessment work all or part of the assessment work submitted.

Note : Le titulaire enregistré sera tenu de vérifier les dépenses demandées dans le présent état des coûts dans les 30 jours suivant une demande à cet effet. Si la vérification n'est pas effectuée, le ministre peut rejeter tout ou une partie des travaux d'évaluation présentés.

Filing Discounts

1. Work filed within two years of completion is claimed at 100% of the above Total Value of Assessment Credit.
2. Work filed three, four or five years after completion is claimed at 50% of the above Total Value of Assessment Credit. See calculations below:

Total Value of Assessment Credit		Total Assessment Claimed
	× 0.50 =	

Remises pour dépôt

1. Les travaux déposés dans les deux ans suivant leur achèvement sont remboursés à 100 % de la valeur totale susmentionnée du crédit d'évaluation.
2. Les travaux déposés trois, quatre ou cinq ans après leur achèvement sont remboursés à 50 % de la valeur totale du crédit d'évaluation susmentionné. Voir les calculs ci-dessous.

Valeur totale du crédit d'évaluation		Évaluation totale demandée
	× 0,50 =	

Certification Verifying Statement of Costs

I hereby certify:
that the amounts shown are as accurate as possible and these costs were incurred while conducting assessment work on the lands shown on the accompanying Report of Work form.

that as [illegible] I am authorized
(Recorded Holder, Agent, Position in Company)

to make this certification

Attestation de l'état des coûts

J'atteste par la présente :
que les montants indiqués sont le plus exact possible et que ces dépenses ont été engagées pour effectuer les travaux d'évaluation sur les terrains indiqués dans la formule de rapport de travail ci-joint.

Et qu'à titre de ______________ je suis autorisé
(titulaire enregistré, représentant, poste occupé dans la compagnie)

à faire cette attestation.

Signature	Date
[illegible]	[illegible] /96

Nota : Dans cette formule, lorsqu'il désigne des personnes, le masculin est utilisé au sens neutre.
