

OSWALD TWP. (M-1048)

This figure is a detailed topographic map of Foleyet Township, Michigan, showing land parcels, roads, lakes, and various geographical features. The map includes labels for Beate Lake, Oswold Creek, Scorch Lake, Bryce Creek, Vimy Lake, Big Boulder Lake, Singed Tree, Singleoke Sta., Slat Rock, and several numbered pits (1083, 1303, 1304, 1082, 1081, 1080). A grid system is overlaid on the map, with coordinates ranging from 1M to 8M for both horizontal and vertical dimensions.

APPENDICES

1. PLAN MAPS OF PROPERTY WITH PLOTTED SOIL GEOCHEMICAL DATA.
2. RAW SOIL GEOCHEMICAL DATA.

1. INTRODUCTION:

This report covers a soil geochemistry (Au) survey performed over selected portions of a group of claims in Muskego and Keith Townships, referred to here as the Boulder Lake Property. This work is part of an on-going gold exploration program being conducted by UTAH MINES LTD.

The soils geochemical survey was designed to delineate any secondary dispersion halos (of gold) from bedrock hosted occurrences, and was specifically used as a screening tool over areas of high I.P. chargeability and over areas underlain by favourable lithology.

Recent work has indicated that gold is much more mobile in the weathering cycle than previously believed (Lakin, Curtin, and Hubert, 1974), and thus in areas overlain by only thin post-glacial soils, dispersion halos around bedrock hosted gold occurrences is an expected phenomenon.

2. LOCATION, AREA, AND ACCESS:

The property consists of a group of 32 contiguous mining claims located approximately 10 miles southwest of Foleyet, Ontario. The property is readily accessible via Highway 101, which transects the claim group in a north-west - southeast direction. (See Figures 1 and 2)

Relief on the property is low, with outcrop ridges rising to a maximum of 50 feet, and more commonly 5-10 feet above surrounding ground level.

Outcrop exposure comprises approximately 15% by area of the property. The majority of the claim group is covered by a thin mantle of post-glacial soils, with only minor glacial and glaciofluvial (sand-gravel, till,) deposits.

Vegetation is predominantly mixed uplands forest, comprising of spruce, poplar and birch. One large spruce-cedar swamp occurs in the northeast section of the property.

Four small lakes are present on the property, all draining to the east and into the Groundhog River System.

3. CLAIMS COVERED BY THE SURVEY:

Because of the sporadic nature of the sampling, (see sample locations on the enclosed plan maps), this work is being filed under Section 86 (18) of the Ontario Mining Act, as Beneficiation Studies.

BOULDER LAKE CLAIM GROUP

4. REGIONAL GEOLOGY:

The regional geological setting of the Swayze-Deloro metavolcanic - metasedimentary belt is outlined by Thurston et al (1977).

All rocks in the Chapleau-Foleyet area are of Early Precambrian age, with the exception of the carbonatite-alkalic complexes associated with the Kapuskasing Structural Zone. The volcanic and sedimentary belts are generally within the greenschist facies of metamorphism. The belts are surrounded and in places intruded by Algoman granites.

The Abitibi Greenstone Belt extends westwards from Quebec into the map area and is abruptly terminated at the Kapuskasing Structural Zone. Several volcanic complexes have been delineated in the Abitibi Belt by Goodwin and Riddler (1970).

The Deloro volcanic complex extends for 50 miles from the Timmins - Nighthawk Lake Area to the Foleyet-Horwood Lake Area, where it is terminated by faults and granitic intrusions. Metavolcanic and metasedimentary rocks in the southern portion of Muskego Township and northern portion of Keith Township are within the northern margins of the Deloro volcanic complex.

5. PROPERTY GEOLOGY:

The property is underlain predominantly by intermediate to mafic metavolcanics, ranging texturally from massive pillowd flows to strongly schistose and chloritized units that are in effect chlorite schists. Numerous mafic tuffaceous units are intercalated with the more massive flow units.

Minor occurrences of argillaceous epiclastic sediments, feldspar porphyry, diabase (as thin east-west trending dykes), and chert-magnetite iron formation were noted during mapping.

Local strike of all lithologies is east-west, and dipping steeply north. The majority of units exhibit a strong chloritic to sericitic-carbonatitic alteration. No major faults were noted during mapping.

6. PREVIOUS EXPLORATION HISTORY:

The area has seen very little in the way of detailed geologic mapping or previous exploration work. Noranda Exploration, in 1982, completed a magnetometer and EM survey over four claims straddling the Keith-Muskego Township Line, two of which are within the boundaries of our property (Claims # 825417 - 825418). No significant conductors were delineated, and the magnetics served to accentuate the strong east-west structural trend in the area.

7.

SOIL SURVEY TECHNIQUE:

Prior to commencement of the geophysical, geochemical, and mapping surveys, cut line grids were established to cover the mining claims. Line cutting was carried out by Explorex Ltd., Val d'Or, Quebec, under contract to UTAH MINES LTD.

The survey grid was established as shown on the accompanying maps. The grid uses an east-west baseline established 1300 feet north of the Keith - Muskego Township Line. Control lines were cut 2640 feet north and south of this baseline. Traverse lines were cut at 400 foot intervals and stations established every 100 feet. At each station wooden pickets were emplaced, which were clearly marked with their respective grid designations.

Soil samples were collected over areas previously identified as attractive based on both geologic mapping and the results of the IP survey. Samples were taken along grid lines at both 50 and 100 foot intervals, where soil development was such as to allow a good sample.

All samples were taken from the characteristically orange to reddish brown 'B' horizon, which typically lay beneath 3-6 inches of gray leached soil and 2-3 inches of organics. At each sample site, data on local drainage, sample composition, and sample depth, was recorded.

The collected samples were dried and forwarded to Chemex Labs Ltd., in Mississauga for analysis. Chemex seived the samples through a -80 mesh screen, and completed the

gold analysis employing a fire assay preconcentration and atomic absorption finish. All results are reported in ppb, and appear plotted beside their respective sample sites on the enclosed plan maps, in Appendix A. Appendix B contains the unploted raw data, as received from Chemex Labs.

8. INTERPRETATION OF RESULTS, AND RECOMMENDATIONS:

Of the 1092 samples collected on the property, only 36 samples returned even remotely anomalous gold values of greater than 5 ppb, ranging in value from 10 ppb to 850 ppb. Most of these anomalous samples occurred as individual 'point' highs, however, some weak trends were delineated.

On Lines 12W to 16W at baseline, values ranged from 135 to 20 ppb respectively.

On Line 16W, from 4 + 50 N to 6N, four consecutive stations at 50' intervals carried anomalous gold values ranging from 45 to 145 ppb.

From L20W to L36W, from 22+50 to 12+50N respectively, a thin horizon at approximately 45° contains anomalous values to 60 ppb Au.

On Line 28W at 11+50 and 12+00N, two consecutive samples carry 40 and 30 ppb Au respectively. These samples occur in the immediate vicinity of a known small gold occurrence in bedrock .

On Line 44W, at 14+50 and 15+00S, two consecutive samples returned Au values of 10 and 850 ppb Au respectively.

None of these anomalous zones are large enough or strong enough to definitively point to a very proximal bedrock Au source. However, several anomalous horizons do warrant further work, specifically resampling around those sample points which carry Au in excess of 40-50 ppb at very small spacings (i.e. 10') to attempt to further delineate and validate the presence of Au. Should any distinct horizons be discovered, power stripping should be employed to get to and sample the underlying bedrock lithology.

9. SUMMARY OF EXPENDITURES:

Attached are five invoices from Chemex Labs Ltd., (#18513764, 18513765, 18513766, 18513767 and 18513768) totalling \$6,830.46. Attached also is a copy of the cheque issued to Chemex Labs Ltd., by UTAH INTERNATIONAL INC.

These expenses translate to;

\$6,830.46 ÷ 15 = 455 Man days of assessment credit, and are being submitted under Section 86(18) of the Ontario Mining Act as Beneficiation Studies.

Enclosed are copies of two Report of Work forms; #275/85, for 140 Man Days  
#328/85, for 30 Man Days.

This leaves UTAH MINES LTD., with a credit of 285 Man Days, and once this work has been approved, a third Report of Work will be filed to utilize the remaining credits.

Mining Recorder  
Ministry of Northern Affairs and Mines  
60 Wilson Avenue  
Timmins, Ontario  
P4N 2S7

Dear Sir:

Enclosed are two copies of a Notice of Intent with statements listing a reduced rate of assessment work credits to be allowed for a technical survey. Please forward one copy to the recorded holder of the claims and retain the other. In approximately fifteen days from the above date, a final letter of approval of these credits will be sent to you. On receipt of the approval letter, you may then change the work entries on the claim record sheets.

For further information, if required, please contact  
Mr. R.J. Pichette at 416/965-4888.

Yours sincerely,

Notice of Intent  
for Technical Reports

1985 11 01

2.8556/275, 328/85

An examination of your survey report indicates that the requirements of The Ontario Mining Act have not been fully met to warrant maximum assessment work credits. This notice is merely a warning that you will not be allowed the number of assessment work days credits that you expected and also that in approximately 15 days from the above date, the mining recorder will be authorized to change the entries on his record sheets to agree with the enclosed statement. Please note that until such time as the recorder actually changes the entry on the record sheet, the status of the claim remains unchanged.

If you are of the opinion that these changes by the mining recorder will jeopardize your claims, you may during the next fifteen days apply to the Mining and Lands Commissioner for an extension of time. Abstracts should be sent with your application.

If the reduced rate of credits does not jeopardize the status of the claims then you need not seek relief from the Mining and Lands Commissioner and this Notice of Intent may be disregarded.

If your survey was submitted and assessed under the "Special Provision-Performance and Coverage" method and you are of the opinion that a re-appraisal under the "Man-days" method would result in the approval of a greater number of days credit per claim, you may, within the said fifteen day period, submit assessment work breakdowns listing the employees names, addresses and the dates and hours they worked. The new work breakdowns should be submitted direct to the Land Management Branch, Toronto. The report will be re-assessed and a new statement of credits based on actual days worked will be issued.
