REPORT ON A
GEOCHEMICAL (SOIL) SURVEY
ON THE BLACK RIVER PROPERTY, HEMLO AREA
THUNDER BAY MINING DIVISION, ONTARIO
FOR
DOLPHIN EXPLORATIONS LTD.

Wawa, Ontario
March, 1988

Seymour M. Sears, B.A., B.Sc
Geologist

RECEIVED

APR 21 1988

MINING LANDS SECTION

SUMMARY

A work program involving linecutting, and geochemical (soil) sampling has been completed on the eastern half of the Black River Property of Dolphin Explorations Ltd. This sixty one (61) claim, wholly owned claim group is located in Wabikoba Lake Map Area, Hemlo District, Thunder Bay Mining Division, Ontario.

The work program has delineated a number of areas which contain weak but possibly significant geochemically anomalous gold values in soil. Two of these are associated with anomalous values in mercury, copper, and zinc and should be investigated further at the earliest opportunity. The remainder of the property should be covered by a similar detailed soil sampling program.

A work program including prospecting, stripping, rock sampling, and limited geochemical and geophysical surveys should be considered. If results are encouraging a modest drill program should be implemented.

INTRODUCTION

The Black River Property of Dolphin Explorations Ltd. is located within the northern limb of the Hemlo Greenstone Belt in northwestern Ontario. The purpose of this report is to present the results of a Geochemical (soil) sampling program carried out on the eastern half of the property during the latter part of 1987. The work was completed by personnel of Sears, Barry and Associates of Wawa, Ontario. The program was designed and directed by Mascot Gold Mines Ltd., the exploration arm of Dolphin.

Part of an old 200 metre by 25 metre control grid was recut along with 100 metre spaced fill-in lines. Extensions were made to cover portions of the property that were not part of the original claim group. This was then covered by "B-Horizon" soil sampling at 25 metre intervals.

PROPERTY, LOCATION, AND ACCESS

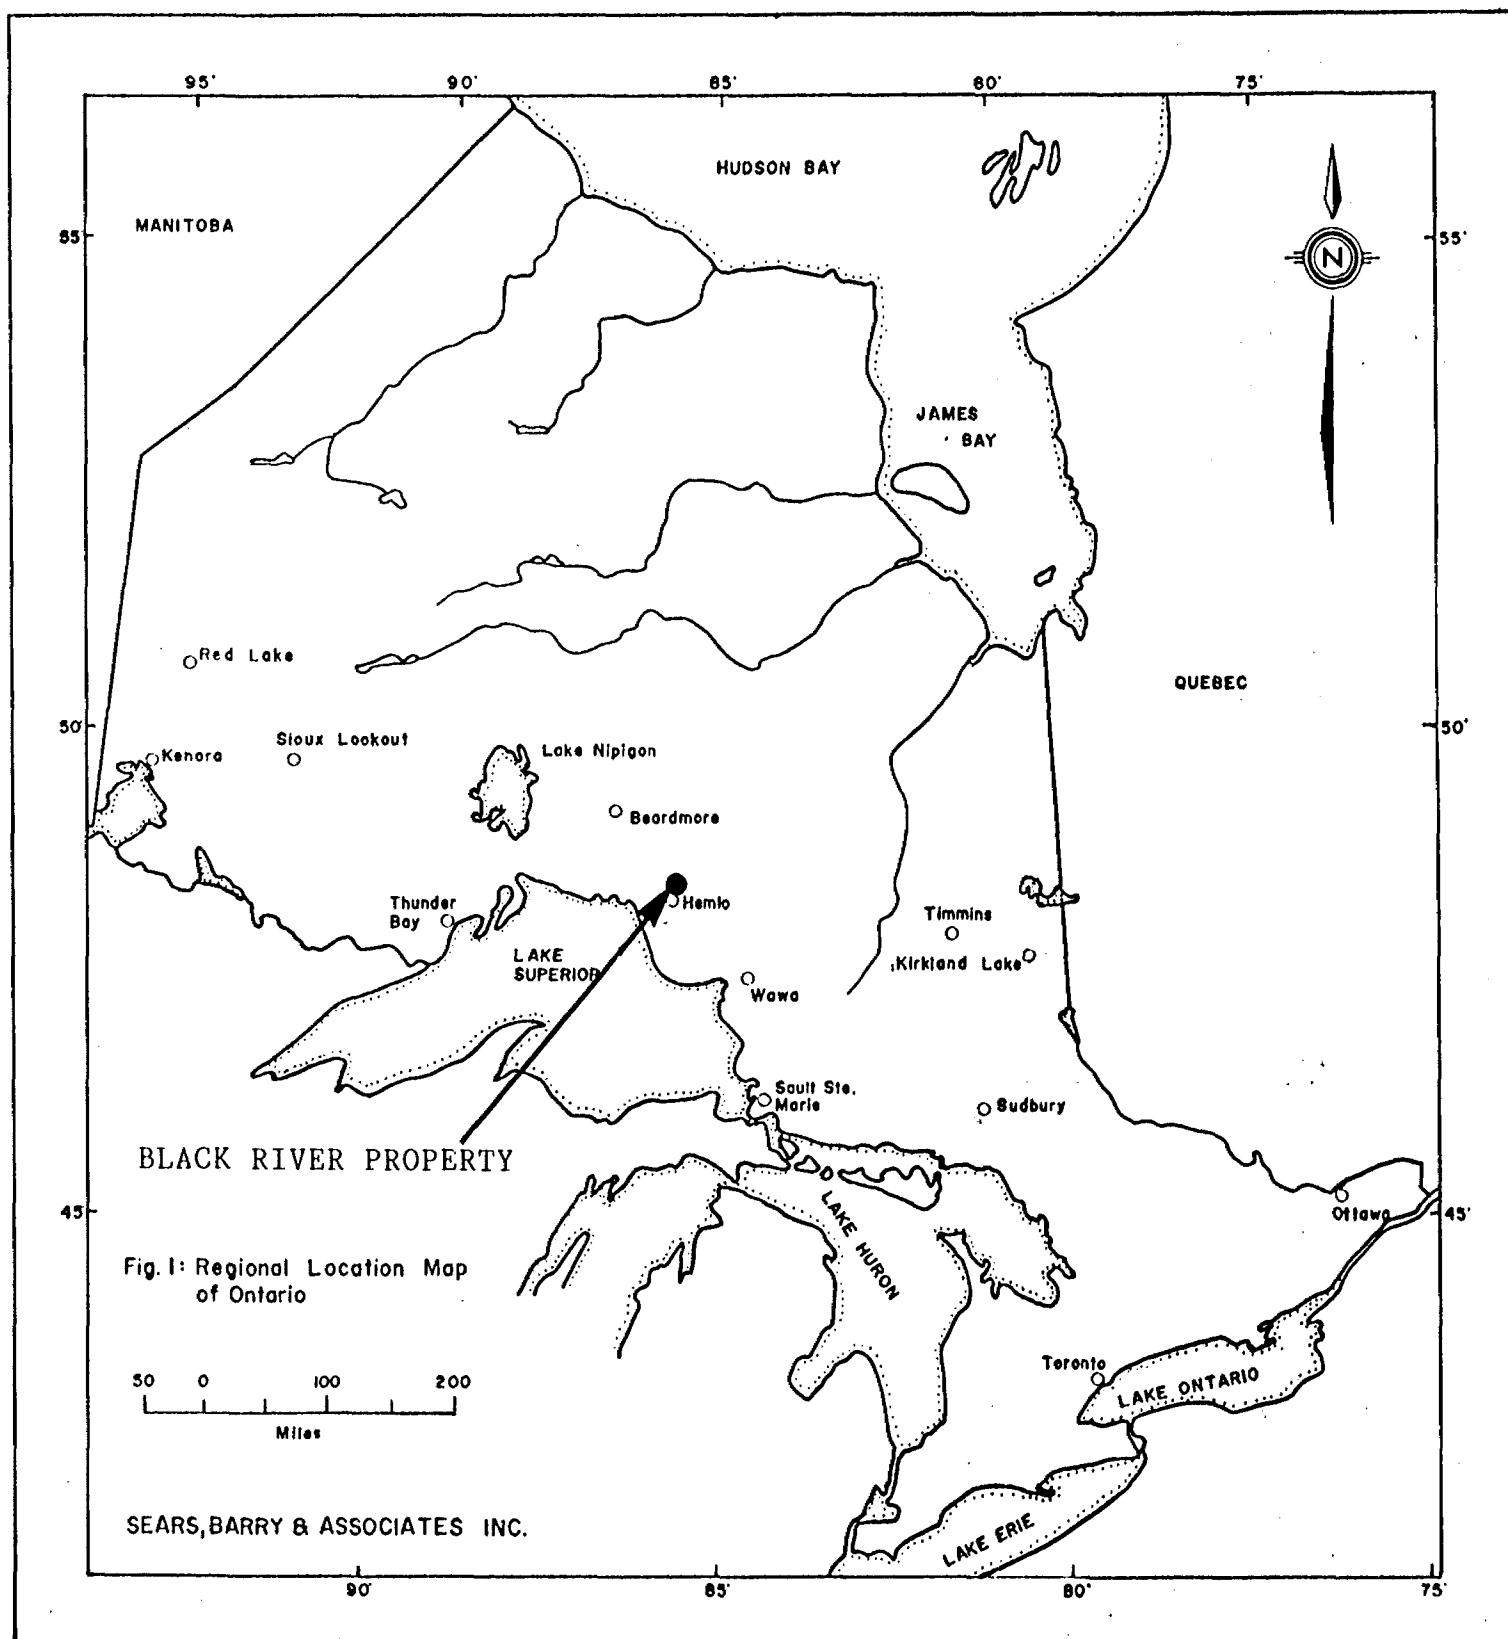

The Black River property consists of sixty one (61) contiguous unpatented mining claims. They were acquired by staking and are wholly owned by Dolphin Explorations Ltd. The claims are shown on MNR claim map G.620, Wabikoba Lake Area, a portion of which is reproduced in this report as Figure 2. They were recorded on March 6, 1987 and are numbered as follows:

| | |
|------------------------------|------|
| TB 924447 - TB 924448 (incl) | [2] |
| TB 924771 - TB 924780 (incl) | [10] |
| TB 970763 - TB 970773 (incl) | [11] |
| TB 970784 - TB 970789 (incl) | [6] |
| TB 974827 - TB 974845 (incl) | [19] |
| TB 974917 - TB 074929 (incl) | [13] |

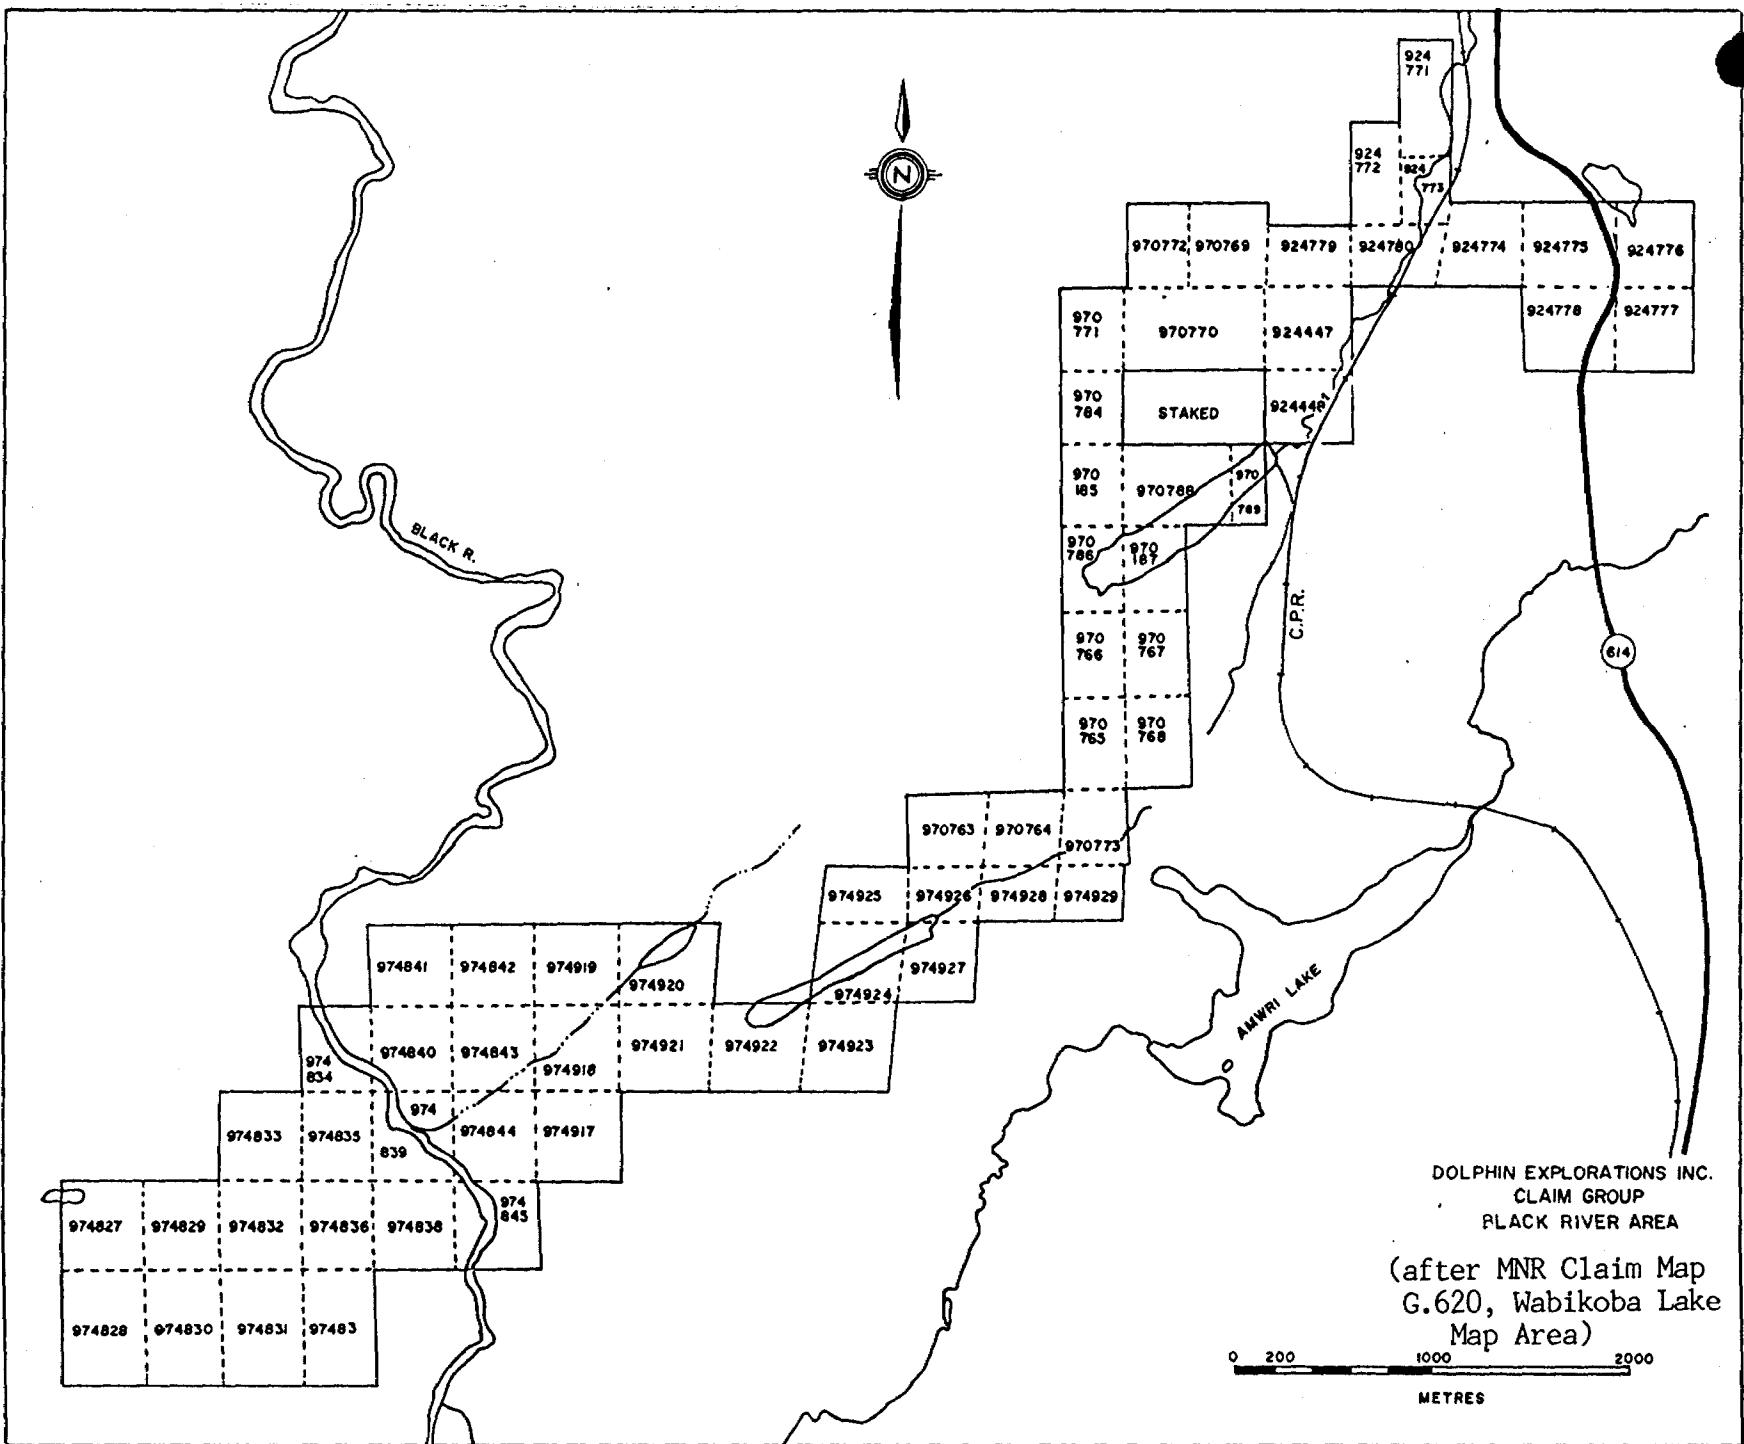

TOTAL 61 Claims

The claims are located approximately six (6) miles north of the Hemlo Gold Deposit in the southwest corner of NTS Sheet 42-C-13, White Lake. They are centered at longitude 85 deg., 55 min. and latitude 48 deg., 48 min.

The property crosses Highway 614 (Manitowadge Corners to Manitowadge) at a point 15 km (9 miles) north of Highway 17. Access to the main part of the claim group can easily be accomplished by means of an old logging road that leads to the Black River. Parts of the property west of Black River are quite inaccessible except by helicopter or by means of a boat and a long walk.

SEARS, BARRY & ASSOCIATES INC.

PHYSIOGRAPHY

The majority of the property is occupied by rolling hills covered by relatively thin till, and mixed forest. However, there are several relatively steep hills in the eastern and north-central parts. There is also a reasonable amount of swamp, cedar swamp and alder covered areas. Parts of the central and northern area has been recently logged over.

There is generally a thick clay cover in this part of the belt, especially near the Black River. However this type of terrain is very restricted on the Dolphin Claims. The drainage system is very mature, ultimately in the direction of the Black River and southwest into Lake Superior.

PREVIOUS WORK

This portion of the Hemlo Greenstone Belt has seen sporadic exploration efforts over the years. The first significant report of mineral occurrences within the area covered by the present claims was a Lead/Zinc showing, the Kusins Prospect, located in the southwest end of the property. Grab samples up to 1.93% Zn, 0.94 % pb, 0.64 oz/ton Ag, and Trace Au were reported from a narrow shear in 1963. In 1965, this prospect was optioned by Cominco, who reportedly drilled six (6) holes. Of the four recorded as assessment work, minor Cpy, Sph, Po, Pb and Py were mentioned, but no assay results were filed.

Also in 1965, Caravelle Mines Ltd. completed an AEM survey on a Cu/Ni prospect (Pulfa Showing) just to the northeast of the current property. Numerous conductors were located, several extending into the current claim group. In 1966, Falconbridge optioned the Caravelle ground and, over the next three years, completed seven (7) drill holes, numerous geophysical surveys and other related follow-up work.

After the Hemlo "rediscoveries" the area was part of a huge block explored under a Joint Venture arrangement by Noranda Exploration, March Resources and Pryme Energy Resources. Work included an airborne geophysical survey, linecutting, ground geophysics (Mag, EM, and limited I.P.), geological mapping, stripping and trenching, and diamond drilling. Several of the targets and follow-up work were located within the boundaries of the current claim block.

Also during this period, Lenora Exploration and Homestake Mineral Development Company completed nine (9) drill holes on a pyritic quartz - sericite schist zone located immediately west of the central part of the claim group. Three holes were submitted for assessment work although no assay results were included. The strike extension of this zone (in both directions) is the prime target on the Dolphin property.

REGIONAL GEOLOGICAL SETTING

The Black River Claim Group of Dolphin Explorations Ltd. is located within the north limb of an east-west trending, oval shaped geosynclinal greenstone belt referred to as the Hemlo Belt (Fig 3). The property is long and narrow, and covers a six (6) mile strike length of Archean mafic and felsic metavolcanic rocks, and interbedded metasediments. The felsic member(s) of this sequence contains abundant sulphides, particularly near its margins. It is locally intensely sheared (quartz-sericite schist) and variably altered. The green mica, ocellacherite, as well as tourmaline, chlorite and sericite commonly occur within this unit. Quartz and quartz carbonate stringers and veins with associated sulphides occur locally. The mafic volcanic rocks contain numerous "iron formations" of limited extent.

The rocks generally dip towards the south. A number of major faults have been mapped in the immediate area of the claim group.

GEOCHEMICAL SURVEY

METHOD

A geochemical (soil) sampling program was completed along a 29.7 mile cut grid during the early part of December, 1987. Samples were collected every 25 metres along gridlines spaced from 100 to 200 metres apart. A total of 1258 samples were collected. The samples were collected by grub hoe from the "B" horizon, from depths of 3" to 15". They were placed in kraft sample bags, partially dried, and forwarded to the Bondar Clegg & Co. laboratory in Ottawa, Ontario for preparation and analysis.

At the laboratory they were dried, sieved to a -80 fraction and analysed for Ag, Au, As, Mo, Cu, Zn, Sb and Hg. The gold analysis utilized an aqua regia extraction method, followed by determination by fire assay and atomic absorption. The mercury analysis was completed by extraction via HNO₃-H₂SO₄-HCl-KMnO₄ and analysis by Cold Vapor atomic absorption. The other six (6) elements were determined by a DC Plasma method after extraction by HCl-HNO₃ (1:3). The resulting data were plotted at a scale of 1:5000, and are included as Maps 1A (As/Au), 2A (Mo/Ag), 3A (Cu/Zn) and 4A (Sb/Hg).

DISCUSSION OF RESULTS

Before discussing any individual anomalies on the Black River property, it should be mentioned that the Hemlo Area has a peculiar problem in the way of overburden cover. This problem is

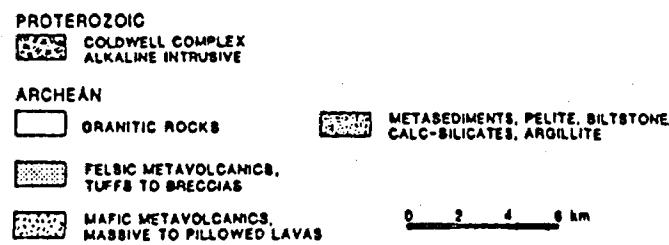

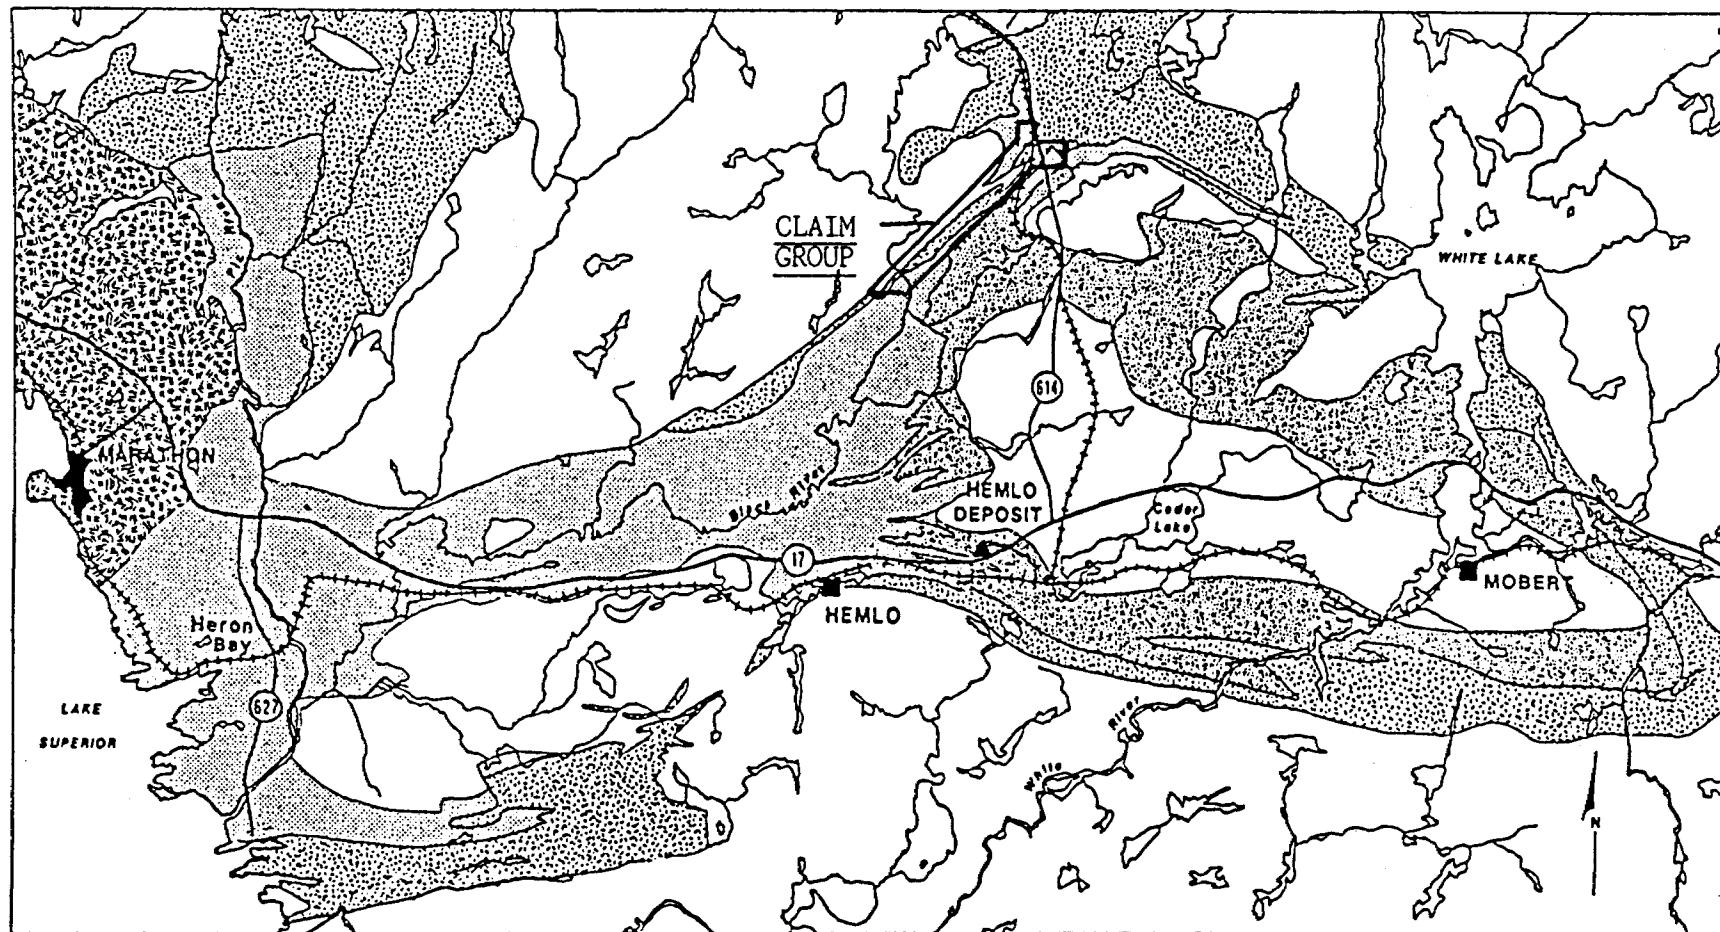

Figure 3 Regional Geological Map

peculiar problem in the way of overburden cover. This problem is related to the existence of a late glacial event which has covered the region with a till sheet consisting of very foreign material that is unrelated to local bedrock. It is only in locations where this foreign till has been eroded away that the geochemistry of the surface soil is representative of the underlying bedrock. This phenomenon has the effect of scattering or completely concealing any soil geochemical response to anomalous gold content in the local bedrock. For this reason, an anomalous value may not be very strong and an anomaly pattern may appear very discontinuous or even consist of an isolated single station "high". It is also important to consider the more mobile pathfinder elements in association with any gold anomaly.

Silver, Molybdenum, & Antimony

The background values for the elements Ag (silver), Mo (molybdenum) and Sb (antimony) were found to be less than their respective detection limits (0.5ppm, 1 ppm & 5ppm). Furthermore, there were virtually no significantly anomalous values in any of these elements on Dolphin's Black River property.

GOLD

Background values for Au (gold) were also less than the detection limit for this element (5 ppb). Any values greater than or equal to 5 ppb are considered, in this case, to be anomalous. It should be cautioned, however, that those values recorded as less than (<) a particular multiple of 10 may be inaccurate due to calculation problems related to small samples.

Of the anomalous values contoured on Map 1A, it is felt that the most significant are those that have associated anomalies in other elements. These include:

Line 144 E, 1400 N - Value of 40 ppb, Au: This is a single station anomaly but there are others in the general area that are also anomalous (eg. L 143 E, 1325 N & 1350 N; L 140 E, 1125 N). Other anomalous elements in this area include Mercury and Copper.

Line 166 E, 1250 N - Value of 45 ppb, Au: A single station anomaly although there is a 280 ppb Au at 1350 N on Line 165 E. This area also has anomalous values in Mercury, Copper and Zinc.

Other single station values in Gold that may be of interest include:

- Line 172 E, 200 N - 310 ppb Au
- Line 141 E, 225 N - 85 ppb Au
- Line 135 E, 325 S - 200 ppb Au

ARSENIC

The background value for arsenic is < 5 ppm (also the detection limit). There are several weakly anomalous values, but their significance is questionable.

COPPER

Copper has a background value of approximately 7 ppm. Any values in excess of 40 ppm are considered anomalous. With the exception of the two areas mentioned in the discussion of gold anomalies (L 144 E, 1350 N - 328 ppm Cu; L 166 E, 1250 N - 80 ppm Cu and others in this area) there are no strong anomalies of more than one line extent. There are a number of anomalous values in succession from 625 N to 750N on Line 144 E. This anomaly should be examined because of its unusual nature.

ZINC

The background value for zinc across the property is approximately 15 ppm. Anomalous values are considered to be in excess of 50 ppm. There appears to be no anomalous clusters of zinc worth mentioning in this part of the claim group.

MERCURY

Values in mercury have a background of approximately 35 ppm. Any values greater than or equal to 100 ppm are considered anomalous in this report. The most significant anomalies in mercury are those associated with the high gold values discussed previously. The interesting thing about these anomalies is that they are larger in areal extent than the gold values and may therefore indicate a broader dispersion of the geochemical signature of bedrock mineralization due to the higher mobility of mercury. They include:

| |
|------------------------------|
| L 143 E, 1375 N - 155 ppm Hg |
| " 1400 N - 190 ppm Hg |
| |
| L 144 E, 1350 N - 260 ppm Hg |
| " 1375 N - 200 ppm Hg |
| " 1400 N - 195 ppm Hg |
| |
| L 166 E, 1250 N - 175 ppm Hg |
| L 168 E, 1275 N - 150 ppm Hg |

Other values worth following up include:

| |
|-----------------------------|
| L 136 E, 450 S - 295 ppm Hg |
| L 137 E, 425 S - 115 ppm Hg |

(Mercury, cont....)

L 173 E, 900 N - 215 ppm Hg

L 174 E, 900 N - 170 ppm Hg

L 175 E, 900 N - 120 ppm Hg

CONCLUSIONS AND RECOMMENDATIONS

The 1987 work program on the Black River Property of Dolphin Explorations Ltd. has delineated several geochemically anomalous gold values in "B"-Horizon soils. At least two of these are supported by anomalous values in mercury, copper and zinc. It is recommended that these anomalies be followed up by detailed geochemical (soil) sampling, prospecting, stripping, and limited geophysical surveys if warranted. Because of erratic and complex overburden in this area, each of the geochemically anomalous samples for gold, should be resampled and routinely prospected.

A similar program of geochemical (soil) sampling should be completed over the remainder of the project area, supported by routine prospecting and rock sampling. Following the completion of this additional work, results should be re-evaluated and drilling considered.

The above work program is estimated to cost as follows.:

LINECUTTING

| | |
|--------------------------------|--------------|
| 50 km @ \$ 300.00/km | \$ 15,000.00 |
|--------------------------------|--------------|

SOIL SAMPLING

| | |
|--------------------------------------------|-----------|
| Detailed (500 samples @ \$25.00) | 12,500.00 |
|--------------------------------------------|-----------|

| | |
|-------------------------------------------------|-----------|
| Completing Grid (1500 sam. @ \$25.00) | 37,500.00 |
|-------------------------------------------------|-----------|

PROSPECTING, MAPPING AND ROCK SAMPLING

| | |
|------------------------------------------|-----------|
| 180 man days @ \$ 200.00 / day | 36,000.00 |
|------------------------------------------|-----------|

ACCOMMODATION, TRAVEL AND SUPPORT

| | |
|-----------------------------------------|----------|
| 180 man days @ \$ 50.00 / day | 9,000.00 |
|-----------------------------------------|----------|

| | |
|----------|---------------|
| Subtotal | \$ 110,000.00 |
|----------|---------------|

| | |
|--------------------------|-----------|
| + Contingency & Overhead | 20,000.00 |
|--------------------------|-----------|

| | |
|-------|---------------|
| Total | \$ 130,000.00 |

Lab Report

REPORT: 088-00123.0 (COMPLETE)

REFERENCE INFO:

CLIENT: DOLPHIN EXPLS. LTD.

SUBMITTED BY: S. SEARS

PROJECT: 87-200

DATE PRINTED: 10-FEB-88

| ORDER | ELEMENT | NUMBER OF ANALYSES | LOWER DETECTION LIMIT | EXTRACTION | METHOD |
|-------|----------------------------|--------------------|-----------------------|------------|----------------------------------------------------------------------------------------|
| 1 | Cu | Copper | 382 | 1 PPM | HCl-HNO ₃ , (1:3) |
| 2 | Zn | Zinc | 382 | 1 PPM | HCl-HNO ₃ , (1:3) |
| 3 | As | Arsenic | 382 | 5 PPM | HCl-HNO ₃ , (1:3) |
| 4 | Mo | Molybdenum | 382 | 1 PPM | HCl-HNO ₃ , (1:3) |
| 5 | Ag | Silver | 382 | 0.5 PPM | HCl-HNO ₃ , (1:3) |
| 6 | Sb | Antimony | 382 | 5 PPM | HCl-HNO ₃ , (1:3) |
| 7 | Hg | Mercury | 379 | 5 PPB | HNO ₃ -H ₂ SO ₄ -HCl-KMnO ₄ Cold Vapour AA |
| 8 | Au | Gold | 382 | 5 PPB | AA-AAS @ 30 gm weight |
| 9 | Testwt Fire Assay Test Wt. | | 66 | 0.01 gms | |

| SAMPLE TYPES | NUMBER | SIZE FRACTION | NUMBER | SAMPLE PREPARATIONS | NUMBER |
|--------------|--------|---------------|--------|---------------------|--------|
| SOIL | 382 | -80 | 382 | Dry,Sieve -80 | 382 |

REMARKS: HUMUS SAMPLES WERE PREPARED AND ANALYZED
SEPARATELY ON 088-00124.0.

SAMPLES LOST IN TRANSIT:L42E 13+00N,L44E 10125N
L55E 16+50N,L55E 16+25N,L55E 12+25N,L55E 9+50N
L172E 4+25N,L172E 4+00N,L173E 7+00N,L174E 6+00N
SAMPLES L66E 15+00N AND L67E 13+00N WERE REC'D
IN DUPLICATE AND GIVEN A&D DESIGNATIONS BY BCC.
< MEANS LESS THAN.

REPORT COPIES TO: C/O MASCOT GOLD MINES
SEARS, DARRY & ASSOC.

INVOICE TO: C/O MASCOT GOLD MINES

REPORT: D88-00123.0

PROJECT: 87-200

Dear Madam:

RE: Data for Assaying submitted under Section 77(19) of the
Mining Act R.S.O. 1980 on Mining Claims TB-924447 et al
in the Area of Wabikoba Lake

The enclosed statement of assessment work credits for assaying has
been approved as of the above date.

Please inform the recorded holder of these mining claims and so indicate
on your records.

Yours sincerely,

W.R. Cowan, Manager
