SUMMARY

The White River project is located approximately 65 kilometres east of the Hemlo gold deposit and 32 kilometres north-northeast of the town of White River, Ontario. Gold Giant Minerals Inc. and Akiko Gold Resources Ltd can earn a 100% interest in the project from a prospecting syndicate (John Ternowesky et-al) which staked the claims, via annual share and cash payments. Pan Global has an option to earn an interest on the northern portion of the claim group (consisting of 73 claims) from Gold Giant and Akiko.

The property encompasses the Dayohessarah greenstone belt, a crescent shaped north trending volcano-sedimentary sequence lying midway between the larger Hemlo and Kabinakagami greenstone belts.

Portions of the property have been worked on by several companies in the past, including CP Rail (1958), Canex Aerial Exploration (1969), Shell Canada (1975), Pezamerica resources Corp. (1983-87), and Black Cliff Mines Ltd. Recent exploration work on the claims on behalf of the joint venture by Hemlo Gold Mines from 1989 to 1991 has included airborne and ground geophysics, reconnaissance prospecting and soil sampling and limited geological mapping. This work has indicated the potential for a new gold discovery on the claims. Significant gold values have been obtained from an occurrence within a regional shear system (deformation zone), the "Sugar Zone Occurrence" which lies on the west side of Dayohessarah Lake and has been traced on the ground for a distance of 750 metres on the claims. Gold values obtained from the Sugar

Zone include grab samples of 2.1, 1.34 and 1.01 oz/ton gold and 2 chip samples taken normal to the structure returned values of 0.451 oz/ton over 6 metres and 3.6 oz/ton gold over 1 metre. In addition to the Sugar Vein, other targets on the property remain to be tested including; airborne geophysical anomalies, and base metal mineralization intersected by diamond drilling during the 1987 Pezamerica program, Mascot Gold Mines Ltd. conducted the work on behalf of Pezamerica. Also, previous soil sampling on the claims during the Pezamerica program identified a number of gold soil anomalies which remain unexplained.

A first phase reconnaissance linecutting, prospecting, geological mapping and soil sampling program was implemented by Pan Global to evaluate the claims. This program was conducted between the dates of August 18 to September 30, 1993 at a total cost of \$32,043.70. A number of significant single and multi-station gold soil anomalies were indicated by this survey. These are discussed in the body of this report. The report recommends additional work on the claims. The next phase of work would consist of prospecting all areas of anomalous soil samples. If warranted, the anomalous areas should be trenched and mapped in detail in preparation for diamond drilling.

-------------------------------	--

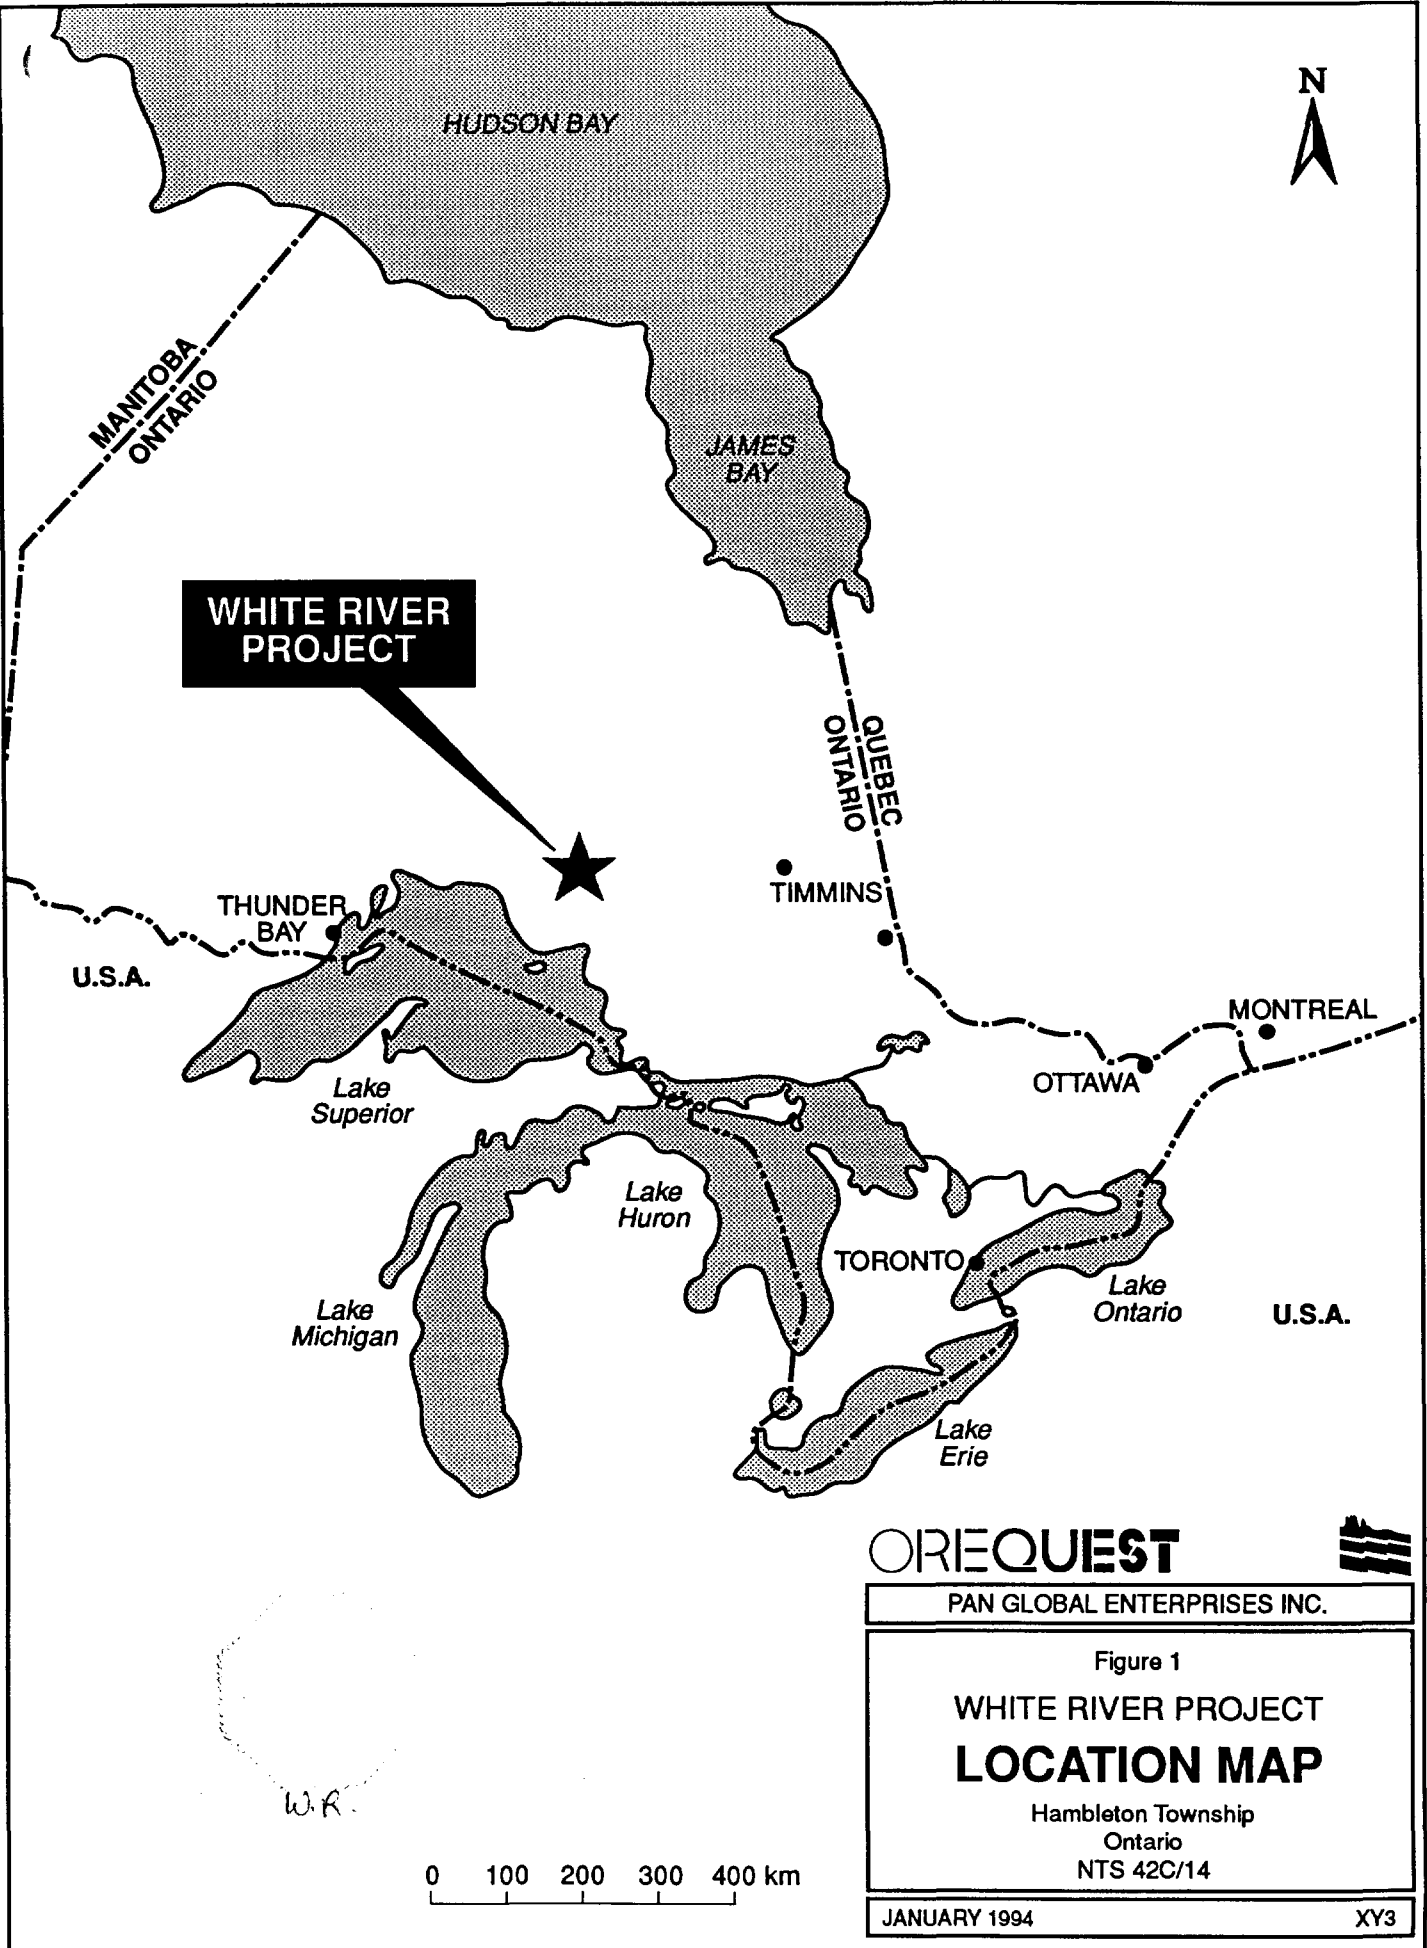

INTRODUCTION

This report summarizes work completed during a reconnaissance linecutting prospecting, geological mapping and soil sampling program completed on the Pan Global claims under option to Gold Giant Minerals Inc. in the White River region of northwestern Ontario. The Pan Global claims comprise the northernmost portion of the overall larger White River project. Work was conducted between the dates of August 18 and September 30, 1993. The work program was completed at a cost of \$32,043.70. A total of 43 rock samples and 1441 soil samples were collected on the Pan Global claims and sent for analysis.

LOCATION AND ACCESS

The Pan Global portion of the White River project consists of 73 unpatented mining claims located approximately 32 kilometres north-northeast of the town of White River, Ontario (Figure 1), latitude 48°45'N, longitude 85°00'W, NTS 42C/14, within the Sault Ste Marie Mining Division of northwestern Ontario. The claims lie within Hambleton Township.

The western and southern portions of the property are accessible via Domtar gravel logging roads (#100 and #200) as well as numerous secondary arteries off these main roads which extend to within 500 metres of the southwest shore of Dayohessarah Lake. The eastern and northern part of the area is also accessible by logging roads and by helicopter or fixed-wing aircraft to Dayohessarah or

Hambleton Lakes. In the winter, the property is accessible by a snowmobile trail from the Hornepayne Highway 631 starting at about 300 metres north of the Nameigos River.

PHYSIOGRAPHY AND VEGETATION

The central portion of the project centred on Dayohessarah Lake is of low relief and covered by glacial outwash material. Low rolling hills characterize the terrain on the west and east sides of the lake. Elevations range from a low of 390 metres to a high point of 495 metres on the east side of the Lake. Bedrock exposure on the property is less than 10%.

Forest cover consists of immature black and white spruce, balsam and pine accompanied by large stands of birch and poplar. low lying areas and swamps are covered in tag alders and cedar.

CLAIM STATUS

Gold Giant and Akiko can earn a 100% interest (50% each) from a prospecting syndicate(John Ternowesky et-al) which staked the claims, via annual share and cash payments as outlined below:

Year	Amount
1994	\$50,000.00 and 50,000 shares of each company
1995	\$50,000.00 and 50,000 shares of each company
1996	\$50,000.00 and 50,000 shares of each company
1997	\$100,000.00 and 50,000 shares of each company

In addition, the companies jointly undertake to pay \$150,000 on the fifth anniversary date once \$2,000,000 in exploration expenditures have been incurred.

Pan Global has an option to earn an interest in a portion of the Gold Giant/Akiko White River project. The claims which comprise the Pan Global portion of the White River project are listed on Table 1 and shown on Figure 2. The claims will be extended by one year upon approval of the work described in this report.

PREVIOUS EXPLORATION WORK

At least six companies have previously been active in the area.

In 1958, a geological survey was conducted for the Canadian Pacific Railway covering a large area encompassing the Dayohessarah and Kabinakagami Greenstone Belts.

In 1969, Canex Aerial Exploration Ltd. initiated a program that included shootback EM, radem magnetometer and geological surveys in the vicinity of gabbroic to ultramafic intrusions at the north end of Dayohessarah Lake. The program culminated in the drilling of three diamond drill holes totalling 1117 feet. The best intersection recorded contained 0.326% Ni and 0.08% Cu over 5 feet, or 0.2% Ni and 0.1% Cu over 30 feet in metagabbro.

In 1975, Shell Canada Ltd. mapped the central part of the greenstone belt at a scale of 1 inch to 1/4 mile, as a guide for an airborne survey to be completed at a later date. There is no record of a subsequent airborne survey by this company.

Between 1983 - 1986, an exploration program was conducted by Pezamerica Resources Corp. who sub-contracted Dighem Ltd. to perform airborne EM and MAG surveys. This survey, which consisted of 1,252 line kilometres on 1/6 mile line spacing, was conducted between February 10 and March 10, 1983 and outlined 31 Dighem anomalies. Twenty-four of these anomalies were investigated by Teck Exploration Company at the request of Pezamerica. Commencing in July, 1983 Teck conducted regional geological mapping and soil geochemical sampling. The regional geochemical data was statistically analyzed to give a threshold of 5 ppb (92nd percentile), with 137 anomalous values of 9-26 ppb (95.5-99 percentile), and 35 highly anomalous (>26 ppb) samples (>99 percentile) obtained from the sampling. A soil gold anomaly was

outlined on the west side of Dayohessarah Lake. During the winter of 1983/84, Teck drilled 9 of the airborne geophysical targets. In all cases these conductors were caused by significant amounts of pyrite and pyrrhotite within a sequence of felsic volcanic rocks.

During the month of August 1985, Mascot Gold Mines Ltd., on behalf of Pezamerica, undertook a program to follow-up on some of the soil anomalies detected by the Teck survey. Twenty four grids were laid out on the property. Detailed soil sampling and mapping was conducted over these areas.

In 1988, United Reef Petroleum Ltd. sub-contracted Stratigraphic Research to conduct a total field magnetic survey which outlined linear NW-trending magnetic highs on the west shore of Dayohessarah Lake.

In 1989, Northwest Geophysics Ltd. conducted magnetometer and VLF surveys for Black Cliff Mines Ltd. with no apparent follow-up.

Most recent interest in the belt first developed when a zone of silicification, sulphide mineralization and anomalous gold values was uncovered by forestry operations southeast of Dayohessarah Lake. Subsequently the entire greenstone belt was staked by a prospecting syndicate.

In 1990 an airborne MAG and VLF-EM survey was conducted by Terraquest Ltd. on behalf of Broad Horizons Trust. A group that optioned the claims from the Syndicate.

When Broad Horizons failed to meet work commitments on the claims the prospecting syndicate approached Hemlo Gold Mines Ltd., Hemlo optioned the property. Initial prospecting by Hemlo personnel uncovered the "Sugar Zone" occurrence. Limited ground geophysics, including I.P., was conducted over three claims in the vicinity of this showing.

A legal action resulted between the prospecting syndicate and Broad Horizons. Work on the claims was suspended pending a settlement of the case. Gold Giant Minerals Inc. conducted a one day evaluation of the Sugar Zone occurrence subsequent to entering into an option agreement with the staking syndicate. On April 5, 1993 an out of court settlement was reached with the Broad Horizons Trust enabling Hemlo Gold and Gold Giant to proceed with an evaluation of the claims.

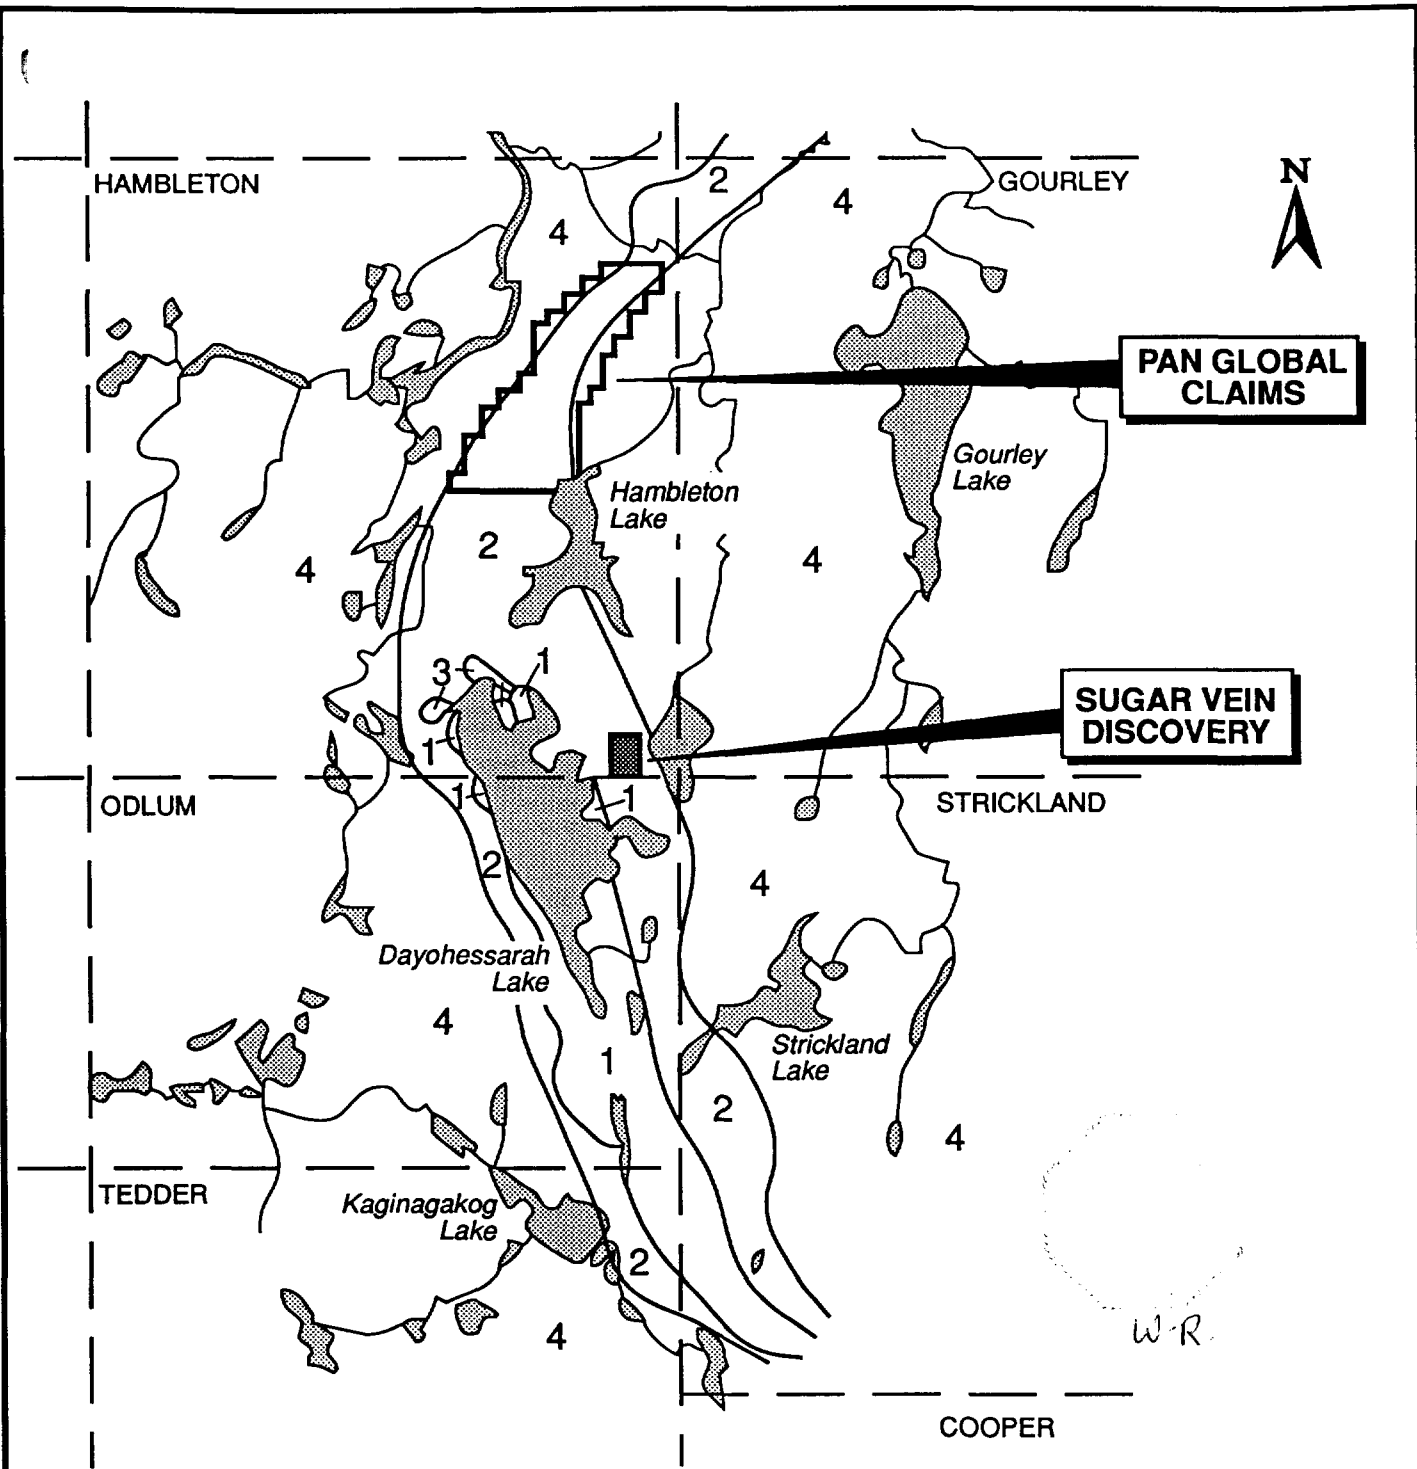

The most recent work on the claims was conducted by Gold Giant in the spring of 1993. At that time, a reconnaissance program consisting of prospecting, mapping, and rock and soil geochemistry was completed over portions of the entire White River project. The Pan Global claims received a cursory examination at this time.

REGIONAL GEOLOGY

The Dayohessarah belt forms a crescent shaped north-northwest trending greenstone belt 32 kilometres long by 6 kilometres wide situated between the larger Hemlo (to the west) and Kabinakagami (to the east) Greenstone Belts. The belt belongs to the Wawa Subprovince of the Superior Province. The belt is a typical volcano-sedimentary greenstone sequence, although the north-south orientation of the belt is unique for the Wawa sub-province (Figure 3).

The supracrustal rocks consist of a central band of metasedimentary rocks located and centred on Dayohessarah Lake. This core is flanked and underlain by mafic volcanic flows and tuffs. The metasedimentary-metavolcanic sequence is enclosed and intruded by plutons and/or batholiths of tonalite to granodiorite and equivalent metamorphosed orthogneiss. Minor mafic to ultramafic stocks and dykes outcrop around the northern end of Dayohessarah Lake.

The metavolcanic rocks represent mixed and interbanded deformed mafic pillowed flows, interflow mafic banded tuffs and waterlain mafic tuffs. The metavolcanic rocks have been metamorphosed to upper greenschist to lower amphibolite facies and locally to mid to upper amphibolite facies.

Figure 3
WHITE RIVER PROJECT
REGIONAL GEOLOGY

Hambleton Township
 Ontario
 NTS 42C/14

JANUARY 1994 XY3

After K. Fenwick Map 2129

The metasedimentary rocks appear to have been derived from predominant volcanic provenance with a minor granitic component and are therefore interpreted to be locally to proximally derived. A local basal conglomerate is overlain by interbedded wacke, siltstone and volcanoclastic units. The metasediments have been differentially metamorphosed into quartz-biotite schists.

The granitic rocks flanking the volcano-sedimentary package on the west side of the Dayohessarah Lake form a massive, medium to coarse grained polyphase composite pluton consisting of an older diorite phase, through tonalite to late granodiorite phases. All phases contain xenoliths of the supracrustal rocks and the later phases contain xenoliths of earlier phases. Pegmatite phases post date all of the above granitoid rocks and crosscut them.

Gabbro and metagabbro occur as sills and small stocks around the north end of Dayohessarah Lake. Pegmatite, aplite and granitic dykes and sills are common throughout the belt. The youngest rocks in the region are represented by diabase dykes which cut all lithologies and trend predominantly northeast and northwest.

The Dayohessarah belt forms a south plunging symmetrical syncline with an axial trend of approximately 340 degrees at the core of the metasediments centred on and underlying Dayohessarah Lake. The resultant planar regional foliation and subparallel bedding trend at 310° to 340°, with steep to moderate easterly dips

on the west limb and steep west dips on the east limb of the syncline. A deformation zone approximately 200 metres wide trending 340° occurs east of Dayohessarah Lake north of a small bay located midway along the east shore of the lake. This deformation zone is characterized by a weak to well developed foliation in the metavolcanic rocks. No extensive alteration zone is associated with this deformation zone.

REGIONAL MINERALIZATION

The new gold discovery made by Hemlo Gold Mines Inc. has been named the "Sugar Zone" occurrence, located 8 kilometres south of the Pan Global claims. The occurrence consists of multiple 1 to 5 metre wide foliation parallel to sub-parallel feldspar porphyry sills containing mineralized quartz veins. Gold values have been recorded from discreet zones within a package up to 50 metre wide.

The gold bearing porphyry sills contain intensely silicified zones which are highly strained, and exhibit a characteristic "sugary" texture. Sulphide mineralization consists of 3-5% disseminated and banded pyrite with appreciable amounts of sphalerite, galena and chalcopyrite associated with quartz veining. Quartz veins are typically 20 to 40 centimetres in width and multiple veins occur across widths from 1 to 6 metres in the core of the shear zone. The host rock to the zone is a mafic agglomerate containing abundant stretched granitic fragments.

The shear zone trends 340° with a dip of 65° to 75° to the west. The silicified package within the shear is conformable to this trend. The mineralized zone has been trace on surface for 750 metres, and is open along strike, to both the north and south.

Highlights of sampling include grab samples of 2.10, 1.34 and 1.01 oz/ton Au. Two chip samples taken normal to the structure returned values of 3.60 oz/ton Au across 1 metre and 0.451 oz/ton Au across 6 metres. The zone was traced for 610 metres of the reported 750 metre strike length, with measured widths between 2 and 14 metres. The average width of the zone is estimated to be 3 metres.

Five hundred metres west of the Sugar Vein occurrence several angular boulders of silicified metavolcanic rocks containing pyrite, arsenopyrite, molybdenite, galena and fuchite have been found. These boulders lie along a 320° trend which is subparallel to the Sugar Zone occurrence. Outcrop exposure in this area is poor but the trend of the boulder train corresponds to a linear magnetic signature.

On the west side of Dayohessarah Lake, Teck exploration, during drill testing of an airborne DIGEM anomaly, intersected a narrow zone of stratiform mineralization consisting of pyrite, pyrrhotite and minor amounts of sphalerite within felsic volcanic

rocks. This hole returned 0.47% Zn over 2.8 feet. None of the assayed sections of core returned gold values.

EXPLORATION PROGRAM

Exploration work included linecutting, prospecting, geological mapping and rock and soil geochemical surveys. A 6 kilometre cut baseline with 100 metre spaced, flagged lines totalling 60.150 line kilometres provided control for the surveys for a total of 66.150 line kilometres of grid. Soil samples were collected on a 100 metre line spacing, the geological mapping was done on a 200 metre line spacing. Soil samples of the "B" horizon were collected at a 25 metre spacing, where possible, along the flagged cross lines. All samples were sent to Min-En Laboratories in North Vancouver, B.C. for analysis.

Geology

The northern portion of the White River project, north of Hambleton Lake (the Pan Global claims) appears to contain similar geology to that which hosts the Sugar Zone occurrence. The area is underlain by mafic volcanics and tuff with rare interflow sedimentary units consisting of chloritic sediments and iron formations also seen. The mafic volcanic sequence forms a pronounced ridge on the property flanked by granitic rocks which underlie the low ground east and west of the mafics. The volcanics exhibit varying degrees of dynamic metamorphism and alteration, and are intruded by 1 to 5 metre wide felsite and porphyry dykes which

are emplaced parallel to foliation. Shearing and silicification is present proximal to these intrusions. A total of 43 rock samples were collected (Figure 4).

Soil Geochemistry

A total of 1441 soil samples were collected from the grid area. Wherever possible, samples were taken of "B" horizon soil or humus if "B" was not available. Line locations and sample results are plotted on Figure 5. A statistical analysis of soil results allows for the following interpretation.

Moderately anomalous	> 10 ppb Au
Anomalous	> 30 ppb Au
Highly Anomalous	> 50 ppb Au

These anomalous thresholds for gold are significantly lower than average for this area of Northern Ontario.

A number of anomalous samples were taken on lines 10 and 12N between 7+50 and 10+00E with values ranging from 10 to 71 ppb gold. This portion of the property is underlain by weakly foliated mafic volcanics. The anomaly remains unexplained. A number of other single station soil anomalies were also indicted by the survey which are also unexplained.

CONCLUSIONS AND RECOMMENDATIONS

The program was successful in outlining an area of anomalous soils as well as a number of single station soil anomalies. All soil anomalies should be prospected. If warranted, the anomalous areas should be trenched and mapped in detail in preparation for diamond drilling.

Credits you are claiming in this report may be cut back. In order to minimize the adverse effects of such deletions, please indicate from which claims you wish to prioritize the deletion of credits. Please mark (✓) one of the following:

- 1. Credits are to be cut back starting with the claim listed last, working backwards.
- 2. Credits are to be cut back equally over all claims contained in this report of work.
- 3. Credits are to be cut back as prioritized on the attached appendix.

In the event that you have not specified your choice of priority, option one will be implemented.

Note 1: Examples of beneficial interest are unrecorded transfers, option agreements, memorandum of agreements, etc., with respect to the mining claims.

Note 2: If work has been performed on patented or leased land, please complete the following:

I certify that the recorded holder had a beneficial interest in the patented or leased land at the time the work was performed.	Signature	Date

2.15328

Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used to maintain a record and ongoing status of the mining claim(s). Questions about this collection should be directed to the Provincial Manager, Minings Lands, Ministry of Northern Development and Mines, 4th Floor, 159 Cedar Street, Sudbury, Ontario P3E 6A5, telephone (705) 670-7264.

Les renseignements personnels contenus dans la présente formule sont recueillis en vertu de la Loi sur les mines et serviront à tenir à jour un registre des concessions minières. Adresser toute question sur la collecte de ces renseignements au chef provincial des terrains miniers, ministère du Développement du Nord et des Mines, 159, rue Cedar, 4^e étage, Sudbury (Ontario) P3E 6A5, téléphone (705) 670-7264.

1. Direct Costs/Coûts directs

Type	Description	Amount Montant	Totals Total global
Wages Salaires	Labour Main-d'oeuvre	13,492	
	Field Supervision Supervision sur le terrain		13,492

Total Value of Assessment Credit (Total of Direct and Allowable Indirect costs)		Valeur totale du crédit d'évaluation (Total des coûts directs et indirects admissibles)	32,044

RECEIVED
MAR 3 - 1994
MINING LANDS BRANCH

Note: The recorded holder will be required to verify expenditures claimed in this statement of costs within 30 days of a request for verification. If verification is not made, the Minister may reject for assessment work all or part of the assessment work submitted.

Note : Le titulaire enregistré sera tenu de vérifier les dépenses demandées dans le présent état des coûts dans les 30 jours suivant une demande à cet effet. Si la vérification n'est pas effectuée, le ministre peut rejeter tout ou une partie des travaux d'évaluation présentés.

Filing Discounts

1. Work filed within two years of completion is claimed at 100% of the above Total Value of Assessment Credit.
2. Work filed three, four or five years after completion is claimed at 50% of the above Total Value of Assessment Credit. See calculations below:

Total Value of Assessment Credit	Total Assessment Claimed
	× 0.50 =

Remises pour dépôt

1. Les travaux déposés dans les deux ans suivant leur achèvement sont remboursés à 100 % de la valeur totale susmentionnée du crédit d'évaluation.
2. Les travaux déposés trois, quatre ou cinq ans après leur achèvement sont remboursés à 50 % de la valeur totale du crédit d'évaluation susmentionné. Voir les calculs ci-dessous.

Valeur totale du crédit d'évaluation	Évaluation totale demandée
	× 0,50 =

Certification Verifying Statement of Costs

I hereby certify:
that the amounts shown are as accurate as possible and these costs were incurred while conducting assessment work on the lands shown on the accompanying Report of Work form.

that as Agent I am authorized
(Recorded Holder, Agent, Position in Company)

to make this certification

Attestation de l'état des coûts

J'atteste par la présente :
que les montants indiqués sont le plus exact possible et que ces dépenses ont été engagées pour effectuer les travaux d'évaluation sur les terrains indiqués dans la formule de rapport de travail ci-joint.

Et qu'à titre de _____ je suis autorisé
(titulaire enregistré, représentant, poste occupé dans la compagnie)

à faire cette attestation.

Dear Ms. Lessard:

**RE: Approval of Assessment Work on mining claims 1069219 et al. in
Hambleton Township.**

The assessment credits for Geochemistry, section 13 of the Mining Act
Regulations, as listed on the original Report of Work, have been
approved as of **April 12, 1994.**

Please indicate this approval on the claim record sheets.

If you have any questions please contact Dale Messenger at 670-5858.

Yours sincerely,

Ron C. Gashinski

NO INFORMATION DELETED :

Note: technical data has been amended → (see over)

The technical data originally matched with report of work. W9450.00011 was incorrect. I have swapped the tech data with that matched with .00012.

You had rec'd 00012 but not yet 00011. I also believe 00011 had not yet been scanned. As you can see the file # 2.15328 has been substituted for 2.15327 on the technical report + maps.

If you have any questions please call Cline at (705)670-5856.
