Brief Work Report

After accessing # 1 site, I went 2 days stripping the site. I then continued on to # 2 site I spent 1 day stripping this site. I then discovered possible # 3 site cleared access to this site I then surface sampled # 1 + 2 sites after spending one day doing this.

I cleared # 1 + # 2 sites for drilling. Spent 2 days bringing in drill + compressor as well as setting up. 3 days drilling + sampling # 1 site. 5 days drilling + sampling # ^(possibly) 3 site. Move to # 2 site set up. Spent 4 days drilling + sampling # 2 site. Spent last day bringing equipment out and prepared for blasting.

while performing the above work

I observed the following:

1 site: highly mineralized, contains a large amount of sulphides, I also observed quartz (grey in colour), pyrite and a small amount of chalcopirite + pyrrhotite.

2 + 3 sites: smaller amount of mineralization, than in site # 1, some pyrite, quartz stringers. Also noticed iron formation.

Hours + Dates Equipment Used.
