The Fall 2001 stripping and sampling program
on the Lowther property

Lowther Township

Northeastern Ontario
NTS 42B/NW

Lecours Exploration Inc

April 2002

Gerald Lecours

Location and Access

The property consists of one 7-unit claim # 1241384 Lowther Township, Ontario. The staked claim covers the southern half of lot 6 & 7 con. 5 & the northern half of lot 6 & 7 con. 4.

Access to the property is by way of Hwy 583 South from Hearst for approximately 20 kms. The last 16 kms is accessible by off-terrain vehicle and two creeks have to be crossed.

Previous Work

Previous work on the property includes minor trenching and diamond drilling of 3 holes totaling 89ft by I. Topaloff in 1957. Magnetics and electromagnetic (VLF-EM) surveys were done by Noranda Exploration Co. Ltd. In 1978.

Regional Geology

The general geology of the area has been described by Bennett et.al (1967). A review of geologic maps shows the area to occur near the contact of a belt of migmatitic meta-sedimentary and meta-volcanic rocks to the north with amphibolite facies metasediments to the south. Near this contact, the migmatitic belt is intruded by a series of elongate granitic stocks. The Lowther Occurrence is located on the western contact of one of these stocks.

Property Geology & Mineralization

The following is taken from a description by S.A. Ferguson, Resident Geologist in Timmins in 1955.

“A large zone of quartz, 60 feet in width, strikes at 70 degrees. On the north side of this band of quartz a zone of pegmatite about 15 feet in width is exposed for about 100 feet. The pegmatite consists of quartz, feldspar, some muscovite crystals four to five inches in diameter and some light greenish spodumene....

Some lepidolite is also present in veins about four inches in width and up to 10 feet in length. Much of the lepidolite is associated with the large quartz vein rather than the pegmatite.”

Ferguson states that the pegmatite is associated with an outcrop of pink granite with irregular patches of pegmatite. The current investigation indicates that the quartz zone represents the inner core of a much larger pegmatite body. The trench mentioned by Ferguson appears to occur at the contact of the quartz zone and a zone of pegmatitic feldspar consisting of potassium feldspar crystals 15 – 30 cm wide containing medium to coarse grain graphic intergrowths of quartz. The feldspar crystals were found to decrease in size to the North, towards an apparent contact. The country rock appears to consist of a medium grain, slightly biotitic granite. Although the contact is not exposed, brownish pink aplitic dikes intrude the granite near the contact and may be similar to the contact zone of the pegmatite. The area south of the quartz zone is poorly exposed at present.

Stripping and sampling results

In Sept 01 Lecours Exploration Inc contracted Cross Country Landscaping to perform manual trenching & stripping on the property. The program uncovered 4 different zones of the pegmatite including lens or pods of spodumene mineral, different zone of quartz ranging in color from light gray to pure white, a zone of moonstone mineral & various other unknown.

Sampling was done using a cut-off saw with a diamond blade cut at 2” width and cut at 2’ intervals.

Aug 18, 2002

To whom it may concern;

Here attached is the required revision for our assessment work submission number
2.23480, transaction number w0260.00760. The assay results are included and the dates
worked in the field are as follows.

Stripping – Sept 27 –28 2001
- Oct 01 – 02 2001

Sampling Oct 11, 2001

Sincerely;

Gerald Lecours

Dear Sir or Madam

Subject: Approval of Assessment Work

We have approved your Assessment Work Submission with the above noted Transaction Number(s). The attached Work Report Summary indicates the results of the approval.

At the discretion of the Ministry, the assessment work performed on the mining lands noted in this work report may be subject to inspection and/or investigation at any time.

The revisions required for this submission have been corrected. Accordingly, assessment work credit has been approved as outlined on the Declaration of Assessment Work Form that accompanied this submission.

If you have any question regarding this correspondence, please contact LUCILLE JEROME by email at lucille.jerome@ndm.gov.on.ca or by phone at (705) 670-5858.

Yours Sincerely,

Sheila Lessard
Acting Senior Manager, Mining Lands Section
