0.0 - 6.7 Casing

6.7 - ~~231.8~~ 224 Greywacke, fine- to fine- medium grained, medium grey feldspathic greywacke
@18.6' bedding to core axis - 60
a number of narrow sections (between 9'-58.2 ' contain 10%-20% narrow quartz veins - veinlets. Minor (1-2%) pyrite is common in the veined sections at- 9'-13.3'; 16.3-19.3', 21.8-23.0, 30.0-32.6', 35.7-36.3', 52.3-58.2'

58.2'-164.2' - greywacke, little or no quartz veins-veinlet
@116' foliation to core axis-45

164.2'-224' - noticeable quartz veining in sections throughout this footage
164.2'-167.2' - strongly foliated and partially sericitized and silicified greywacke, 1% fine pyrite
167.2'-168.3 - quartz vein with 20%, in part, sericitized wall rock
168.3'-169.2' - strongly foliated, silicified and partly sericitized, 1-2% pyrite
169.2'-170.5' - quartz vein, 25% included greywacke, 2% arseno, trace pyrite
170.5'-174' - 50% quartz veining, 1-1.5% sulphide, arseno > pyrite
174'-175.4 - 10% quartz veining, minor pyrite
175.4'-177.3' - 40% quartz veining, 1% arseno, lesser pyrite
177.3'-200' - narrow quartz veins-veinlets average 15%, generally 1-2% pyrite
200-211.6 - 20-30% quartz as veining? or qtz-rich sediment; strongly foliated, 1% pyrite
@ 205' foliation to core axis-45

224-404 with exception of quartz porphyries as noted below, the rock is a moderate - well foliated greywacke with minor seams and veinlets of quartz; minor (1%) fine pyrite is ubiquitous

231.8'-238.5 quartz porphyry, contact @ 45 core axis; 1% pyrite with local minor seams and disseminations of arsenopyrite

309.3'-318.2 quartz porphyry - tuff? moderately sericitized at margins
390' - 1" quartz vein trace pyrite minor tourmaline

0.0 - 6.5' Casing

6.5 - 167.5' Greywacke - in general, a fine grained feldspathic wacke with little qtz veining (3-4% narrow qtz veinlets), alteration or mineralization. 158.4' - 167.5 marks the onset of a wide, intermittent zone of alteration, mineralization and qtz veining extending to approximately 248.0'

@72' foliation to CA - 45
44 - 44.8 - 25% qtz veinlets
81 - 83' - 20% qtz veinlets
111.8 - 114'- qtz vein + 50% included sediments, 1-1.5% pyrite
122 - 125.2 - sericitized wacke, minor qtz veining, 1% pyrite
128.4 - 128.7 - qtz vein, barren
145.7 - 146 - qtz vein, barren
158.4 - 167.5 - general increase in qtz veinlets averaging 15%

167.5 - 248' Greywacke, intermittently altered, veined and mineralized

167.5 - 172.7 - silicified vein margin, sericitized, 2% sulphide (arseno 1/2%)
172.7 - 174 - qtz vein, minor tourmaline, 8-10% arseno in 2" section containing 30% sericite
174 - 177 - minor qtz veining, 1% very fine pyrite, trace arseno
177 - 178.2 - qtz vein, sulphides (2-3%, py>arseno) in sericitic sections
178.3 181.5 - 7-8% qtz veinlet
181.5 -183.1 - strongly sericitized, foliated wall rock, minor carbonate; both arseno and pyrite, arseno increasing toward vein margin (3-5%)
183.1 - 187.1 - qtz vein, most sulphide (virtually all arseno) is within chloritic and seric-

itic seams and patches, trace tourmaline. Overall 1% arseno, local concentrations to 10%.

187.1 - 190 - weakly silicified, 1-2% fine pyrite, trace arseno

190 - 213.5 - strong foliation, 1% pyrite

213.5 - 214 - qtz vein, 2% arseno

214 - 223.7 - minor silicification, arseno + pyrite < 1%

223.7 - 229 - strongly foliated, silicified, sericitized; 3% arseno, 1% pyrite
qtz veining - 223.7 - 224.2
- 226.3 - 226.5
arseno as smears & seams parallel to foliation & as disseminations

229 - 240.8 - largely qtz vein - silicified material; 234-234 silicified-sericitized seds, 4% arseno + pyrite
Overall 2-3% sulphides of which 2% arseno

240.9 - 241.8 - sericitized & silicified wall rock, sparse sulphide

241.8 - 242.2 - qtz vein, minor pyrite

242.2 - 248 - weakly silicified wacke, only minor-trace pyrite

248 - 404 Greywacke, moderate to well foliated, sparse pyrite

295.7 - 1" qtz vein, trace pyrite

@ 334' foliation to CA 50

345.2 - 1/4 " qtz vein, minor pyrite & tourmaline

352.7 - 1/2" qtz vein, barren

362.1 - 1/2 " qtz vein, minor pyrite

370 - 371.4 - qtz vein, arseno + minor pyrite, trace tourmaline; local strong concentrations of arseno (5%+), overall 1-2% average.

380.4 - edge of qtz vein, trace pyrite

0.0 - 19.5' Casing

19.5 - 121.7 Greywacke, fine-medium grained, medium-light grey, moderate-well foliated, 5% biotite remainder being feldspar and lesser quartz

- 34.5 - 36'- silicified, minor pyrite
- 36.8 - 1" qv @ 50 CA, trace pyrite + po
- 37.5 - 38.5 - strong silicification, 1% pyrite
- 41' - foliation to CA - 45
- 94.2 - 95.7 - silicified, < 1% pyrite

121.7 - 208.5 Greywacke; portions throughtout this section are highly silicified, sericitized, quartz veined, and mineralized with arsenopyrite and pyrite

- 121.7 - 124.7 - highly silicified, 3-5% sulphide, minor sericite
- 124.7 - 129 - same, extreme silicification, strong foliation, 5% sulphide (mainly pyrite)
- 129.0 - 132 - strong silicification and sericitization, are within immediate wall rock of adjacent qtz vein; 3-4% arseno + minor pyrite. @ 131' a 1/2" seam of massive pyrite parallel to foliation.
- 132.0 - 138.4 - Quartz vein, 3-5% arseno 1% pyrite; the main qtz vein is beige to tan in colour, highly fractured, and contains numerous sericitic slips and seams; this in turn is cut by a latter white qtz veining; both vein types are mineralized. Trace of galena and possible sphalerite
- 138.4 - 139.4 - extremely silicified sericite schist; first 0.5' contains 5-8% arseno, last 0.5' only pyrite
- 139.4 - 144 - silicified, strongly foliated, 1-2% fine arseno + pyrite parallel to foliation
- 144.0 - 153.5 - silicification not as pronounced, 1% fine sulphides
- 153.5 - 158.3 - greywacke, very little alteration or sulphidation
- 158.3 - 160.5 - qtz vein, trace sulphide

160.5 - 163 - weak silicification, trace sulphide
163.0 - 165 - qtz vein, , 1% pyrite
165.0 - 167.5 - extremely silicified, sericitized
167.5 - 176.7 - Quartz vein, a number of narrow slips of sericitized wall rock are included near the vein margins; 1% arseno + pyrite as disseminations and narrow fracture fillings
176.7 - 177.7 - partially bleached and sericitized wall rock, weakly silicified; 2% fine pyrite + arseno parallel to foliation. Foliation to CA - 45
177.7 - 183.5 - partially silicified, <1% fine parallel to foliation; 178.6-179.2 - qtz vein
183.5 - 186.3 - partially silicified and sericitized; up to 40% sericite-rich bands 0.1-0.01' wide. 1-2% fine sulphide (mainly pyrite)
186.3 - 198.7 - Quartz vein, contains 1-1.5% fine disseminated and/or fracture filling sulphide (pyrite + trace arseno)
198.7 - 205.4 - sericitized and silicified wall rock, locally schistose, 1-3% fine sulphides (py+po+ arseno)
205.4 - 208.5 - weakly silicified, minor sericite, trace sulphide

208.5 - 404' Greywacke; in general, relatively unaltered and unmineralized

225.9 - 226.7 - qtz veins-veinlets 40%, barren
238.7 - 1/2" qtz vein @ 60 CA
239.4 - 1" qtz vein sub parallel foliation, minor pyrite
243.0 - 244.5 - narrow zone of silicification, minor pyrite
246.8 - 247.8 - qtz vein, trace arseno
252.5 - bedding and foliation @ 45 CA
262.4 - 1" qtz vein, 80 CA, trace pyrite
274.5 - 1/2" qtz vein, 75 CA, minor pyrite
281.5 - 282.2 - ground core, possibly silicified, minor pyrite
296.0 - 1" qtz vein, 75 CA, minor pyrite
322.0- 25% qtz veinlets over 4", barren
350.8 - 351.4 - 25% narrow qtz veins to 1/2" subparallel foliation, trace pyrite

	361.8 -	1" qtz vein @ 15 CA, minor pyrite

Claim - P651411, McCowan Tp Date finished - October 26, 1988
Logged by - D. R. Pyke Drilled by - Groleau Diamond Drilling

0.0 - 22.3'	Casing
22.3 - 50.5	Greywacke,fine to fine-to medium grained, medium grey, strongly foliated, 5% biotite. 2-3% fine (< 3mm) quartz and feldspar fragments are common. Sparse qtz veinlets, rarely >1/2" wide, are sub-parallel to foliation. Locally a flaser-type structure is developed.
50.5 - 50.7	Quartz vein
50.7 - 88.3	Greywacke, as above, but has taken on a somewhat darker hue, and contains more epidote-rich seams; these seams are 0.1"-1.0" wide, contain minor py and/or po, and at first glance ressemble pillow rims, however, obvious quartz clasts confirm the rock is epiclastic
88.3 - 92.3	Diabase, fine grained, feldspar phyric
92.3 - 113.2	Greywacke 94.3 - 95 - epidote veining, associated silicification and sulphidization (2-3%) 96.2 - 1" diabase dikelet 106.0-113.2 - varying degrees of silicification, in general intensifying toward diabase contact. Pyrite 1%
113.2 - 164	Diabase; to 119.5' is fine grained, porphyritic, then rapidly becomes coarser grained and non-phyric.

0.0 - 3.0	Casing
3.0 - 44.8	Diabase
44.8 - 46.5	Feldspar porphyry, trace pyrite, foliation to CA 27
	46.1'- 1" qtz vein @ 47 to CA
46.5 - 51.2	Diabase, contact at 28 to CA
51.2 - 52.8	Greywacke, strongly foliated, minor fine pyrite
52.8 - 54.8	Feldspar porphyry, strongly foliated (in part a cataclastic texture); porphyry-sediment contact at 35 to CA and parallel to foliation
54.8 - 160.8	Greywacke; epidotization as narrow veins-seams of epidote is common as a contact metamorphic effect of the adjacent diabase
	60.6' - 1/2" qtz vein @ 45 CA, minor arseno+py
	66.6 - 67.6 strong epidotization and silicification, 1% pyrite
	71.6 - 81.1 epidote as bands sub-parallel to foliation, varying from .05-0.1" and forming 20% of rock; locally 80-90% epidote bands over widths of 2'
	82.1 - 84.9 qtz vein to extremely silicified greywacke, 15-20% epidote imparting strong fabric (foliation); arseno < 1%, trace pyrite
	73.4 - 1/2" qtz vein, minor sulphide (po+py+ trace arseno), trace tourmaline?
	88.7 - 2" feldspar porphyry vein
	101.7 - 102.8 - 15-20% qtz veinlets
	110.5 - 3/4" qtz vein, trace py+arseno
	120.2 - 1.5" qtz vein, 25 CA, trace pyrite
	127.5 - 1/2" qtz vein, 2% pyrite
	134.2 - 1" qtz vein, minor pyrite
	136.0 - 1/2" qtz vein, 45 CA, minor pyrite
	137.4 - 137.8 qtz veining to 1" @ 40 CA, minor pyrite and very fine arseno (<1%)
	139.4 - 140.9 qtz veining (30 CA) to 1" wide and silicification, minor arseno+pyrite
	142.2 - 0.3" qtz vein @45 CA
	143.1 - 1/2" qtz vein @ 45 CA

143.3 - 1/2" qtz vein
143.5 - 1/4 " qtz vein
149.5 - 1" qtz vein, minor arseno
151.8 - 3/4" qtz vein @ 80 CA, trace arseno
154.0 - foliation to CA 28
154.3 - 1/2" qtz vein
156.5 - 157.7 2" qtz vein, 25 CA, moderate silicification, minor pyrite+arseno

162.0 - 197.7 Greywacke; this portion of the core is extensively veined. mineralized, silicified and contains numerous sericitic zones

164.0 - 170 Quartz vein, numerous sericitic slips and augened quartz structures, strongly foliated. Overall vein contains 1-1.5% sulphide (pyrite>arseno), however there are sericitic sections to 1-2" that contain 10%+ sulphide
170.0- 171.6 silicified - sericitized greywacke
171.6- 174.8 qtz vein, sericitic fabric @30 CA
174.8- 179.4 siliicified and moderately sericitized wall rock, 1-2% fine py+arseno, strongly foliated
179.4- 183.5 wacke, only minor pyrite
183.5- 186 largely silicified, in places more akin to qtz veining
186.6- 188 qtz veining, very sericitic 1% fine disseminated arseno+pyrite
188.0- 193 wacke, 15% qtz veinlets, 1-2% fine pyrite+arseno
193.5- 197.7 qtz vein and seicitized and mineralized wall rock extends from 193'-197.7. The sericitic margin contains 8-10% arseno, 1-2% pyrite. The white, sericitic qtz vein contains 2% arseno.

197.7 - 295 Greywacke
207.6- 208.9 qtz vein, minor pyrite, trace arseno

208.9- 211.9 15% irregular small qtz veins-veinlets, minor pyrite and arseno

211.9- 212.8 qtz vein
214.4- 218 20-25% narrow qtz veins-veinlets, silicified, 1% pyrite
218.0- 219 qtz veining,50% sericite, 2% arseno, vein @ 40 CA
225.1- 225.7 qtz vein, 8% arseno - largely in immediate wall rock
226.6- 4" qtz vein, 1-2% arseno, minor pyrite
227.3- 230 20% qtz veining, 1% arseno
234.4- 237.2 20% qtz veining, 1% pyrite, minor arseno
241.5- 1" qtz vein - 40 CA
242.3- 1/2" qtz vein
242.9- 1/2" qtz vein
243.5- 2" qtz vein
248.7- 1.5" qtz vein
258.5 6" qtz vein, minor arseno
264.9- 265.7 qtz vein, minor arseno + sericite
287.5- 295 15-20% narrow qtz veinlets, minor py

0.0 - 68.8' Casing

68.8 - 243.2 Greywacke; fine grained, medium-lite grey, 4-7% biotite, moderately foliated; minor qtz veinlets average 10%, with local concentrations to 30%. 1-2% fine pyrite is common

72.8- 75.1 minor silicification and qtz veining 2-4% pyrite, foliation to CA - 45
116.5- 0.1" qtz vein // foliation, barren
124.0- there starts to be a general increase in percentage of qtz veins-veinlets(from 68.8-124' there is 1-2%)
127.5- 130 1-3% arseno+pyrite associated with 15-20% qtz veinlets
131.0- 132.5 minor silicification & 2-3% fine pyrite; 10-15% qtz veinlets
139.5- 140.3 30 % qtz veinlets @ 45 CA, trace pyrite
146.0- 148 25% qtz veinlets, trace pyrite
175.4- 176.7 25-30% qtz veining, trace pyrite
181.2- 183.2 moderate silicification, 3-5% pyrite as disseminations and stringers generally along foliation planes
203.6-203.7 sericited qtz porphyry-tuff? minor py, qtz "phenos" 10%, 2-2.5mm

243.2 -308.5 Greywacke; this general zone contains noteable silicification, sercitization, qtz veining and arseno+pyrit mineralization

243.2- 250 weakly siliified & sericitized, 1/2" seam pyrite
250.4- 257.5 qtz vein, 2% arseno+pyrite, local sericitic seams; the vein itself has been refractured and silicified
257.5- 260 sericitized and silicified wall rock, strongly foliated, 3-4% pyrite, trace arseno
260.0- 266.9 less silicification,strongly foliated 2% purite

266.9- 268.2 silicification-sericitization, 2-3% arseno,lesser pyrite, minor tourmaline
268.2- 273.6 weak silicification, 2% pyrite, tr arseno
273.6- 285 strong foliation, 1-2% pyrite
285.0- 286.5 minor arseno+pyrite
286.5- 301.5 Quartz vein, averages 1-2% arseno+pyrite,locally highly tectonized (cataclastic)
301.5- 303.7 highly silicified-sericitized wall rock, 3% pyrite
306.0- 307 Quartz vein, 1-2% pyrite, numerous sericitic seams, cataclastic texture
307.0- 308.5 silicified-sericitized wall rock - margin of vein

308.5 - 454 Greywacke, qtz-rich, strongly foliated, 1/2% fine pyrite, bedding locally evident,and up to 2' thick, most beds range from 1/4"-1"

344.0 foliation to CA @ 45
450.0 bedding and foliation @ 45 to CA
410.0- 410.5 possible grading giving tops up hole
413.0 qtz fragments to 3-4mm, augen-shaped

454 End of Hole D.R. Lyle.

DDH # M88-9 Azimuth 180 Dip -50 ; @534' -54 Length - 534'
Location - L36W, 49+50N Date started - November 13, 1988
Claim - P758387, McCowan Tp Date finished - November 15, 1988
Logged by - D. R. Pyke Drilled by - Groleau Diamond Drilling

0.0 - 16.4 Casing

16.4 - 319.5 Greywacke; fine-medium grained, medium grey, moderately foliated to massive, local sections containing 15-20% qtz veinlets; background sulphide < 1%

19.8- 20.1 qtz vein
24.0- 24.7 qtz vein, trace pyrite
34.0 foliation to CA - 45
37.5 1/2" qtz vein, subparallel foliation, barren
51.2 qtz vein, 90 to CA, barren
43.3 2" qtz vein, barren
92.0- 107 25% qtz veining varying from 0.1 - 1.0', and commonly 1"-4"; minor arseno @ 92', 94', 98.5', 101' and 106.5'. Locally minor po, and possible trace sphalerite @ 96.6'
173.3- 173.7 qtz vein, 90 CA, barren
193.0 1" qtz vein, 1% arseno+pyrite
230.0- 231 15% qtz veinlets, minor pyrite
271.0 foliation to CA 45
269.7 1" qtz vein, 90 CA
310.0- 314 background sulphide content increases to 1-2% pyrite, generally as fine elongate segregations // foliation

319.5 - 390 Greywacke; general zone of silicification and qtz veining

319.5- 321 silicified wacke, 1-2% pyrite
321.0- 344.4 Quartz vein, averages 1.5-2% arseno and 1/2% pyrite;
325.7-328.5 - seams and pods of arseno, tr sphalerite, massive 2" seam arseno @ 327.2'
344.4- 348.2 silicified-sericitized
348.2- 351.6 Quartz vein, locally sericitic, minor massive pyrite seams to 1/2-1", minor po
353.0- 355.8 Quartz vein

378.0- 390 Quartz vein, @ 379.5-380.5 minor included wacke
Minor silicification of the intervening sediment from 348-390'

390 - 534	Greywacke, fine grained, moderate foliation, minor pyrite	
	412.0-	foliation to CA 45
	423.2- 426	silicified, minor py+po
	435.7- 426.2	qtz vein, minor py+po
	514.0-	foliation to CA 45
534	End of Hole
