1. INTRODUCTION

This report describes the specifications and results of a geophysical survey carried out for Universal Trident Industries Ltd. and Coulson Exploration Inc. of 1905-62 Wellesley Street West, Toronto, Ontario, M5S 2X3 by Terraquest Ltd., 905 - 121 Richmond Street West, Toronto, Canada. The field work was performed on May 23, 1987 and the data processing and reporting from May 24 to September 18, 1987.

The purpose of a survey of this type is two-fold. One is to prospect directly for anomalously conductive and magnetic areas in the earth's crust which may be caused by, or at least related to, mineral deposits. A second is to use the magnetic and conductivity patterns derived from the survey results to assist in mapping geology, and to indicate the presence of faults, shear zones, folding, alteration zones and other structures potentially favourable to the presence of gold and base-metal concentration. To achieve this purpose the survey area was systematically traversed by an aircraft carrying geophysical instruments along parallel flight lines spaced at even intervals, 100 meters above the terrain surface, and aligned so as to intersect the regional geology in a way to provide the optimum contour patterns of geophysical data.

2. THE PROPERTIES

RICKABY AND LAPIERRE TOWNSHIPS (A-699.2)

The property is located in Rickaby and LaPierre townships, in the Thunder Bay Mining Division of Ontario about 35 kilometres west of the town of Geraldton. The area is readily accessible by roads.

The latitude and longitude are 49 degrees 46 minutes, and 87 degrees 30 minutes respectively, and the N.T.S. references are 42E/13 and 42E/14.

The claim numbers are shown in figure 2A and listed below:

GERALDTON PROJECT (A-699.3)

The Geraldton Project is located in Kirby, Fulford, Lindsley, Errington, McQuesten and Colter townships, in the Thunder Bay Mining Division of Ontario immediately west of the town of Geraldton. The properties are directly accessible by roads. This survey area is divided into two sheets, the east sheet and the west sheet.

The average latitude and longitude are 49 degrees 45 minutes, and 87 degrees 05 minutes respectively, and the N.T.S. references are 42E/10,11,14,15.

The claims are shown in Figure 2B and listed below:

MCQUESTEN TOWNSHIP (A-699.4A)

The McQuesten Township property is located in McQuesten township in the Thunder Bay Mining Division of Ontario about 5 kilometres north of the town of Geraldton. The property is directly accessible by roads.

The latitude and longitude are 49 degrees 47 minutes, and 86 degrees 53 minutes respectively, and the N.T.S. reference is 42E/15.

The claim numbers are shown in Figure 2B and listed below:

TB	937901-937950	(50)	
	928358-928367	(10)

	928801-928827	(27)	..... Total 196 Claims

ASHMORE AND CROLL TOWNSHIPS AREA (A-699.4B)

The Ashmore and Croll Townships area, also known as Kenogamisis Prospect, is located in Ashmore and Croll townships in the Thunder Bay Mining Division of Ontario about 8 kilometres east of the town of Geraldton. The property lies primarily in Croll township and can be accessed directly from the Trans Canada Highway.

The latitude and longitude are 49 degrees 43 minutes, and 86 degrees 48 minutes respectively, and the N.T.S. reference is 42E/10.

The claim numbers are shown in Figure 2C and listed below:

TB	928901-928933	(33)	
	942846-942850	(5)

HOUCK TOWNSHIP AREA (A-699.4C)

The property is located in Houck Township in the Thunder Bay

Mining Division of Ontario about 17 kilometres northeast of Geraldton. The property is directly accessible by roads.

The latitude and longitude are 49 degrees 46 minutes, and 86 degrees 41 minutes respectively, and the N.T.S. reference is 42E/15.

The claim numbers are shown in Figure 2D and listed below:

TB	937951-938000	(50)	
	938053-938086	(34)

The survey area is subdivided into two belts, the Beardmore-Geraldton Belt and the Onaman-Tashota Metavolcanic Belt, separated by the Paint Lake fault. The Beardmore-Geraldton belt is comprised of an east-west trending isoclinally folded metavolcanic-metasedimentary sequence. It has been subdivided lithologically into the Southern Metavolcanic Sub-belt and the Southern Metasedimentary Sub-belt. The Southern Metavolcanic Sub-belt contains narrow east trending unites of magnesium to iron tholeiites, intermediate to mafic tuffs and minor associated metasediments including iron formation.

The Southern Metasedimentary Sub-belt consists of wacke, conglomerate, siltstone and magnetite-hematite-chert iron formation.

The Onaman-Tashota Metavolcanic Belt to the north is an older felsic to mafic metavolcanic (calc-alkaline and tholeiitic) sequence. It is arcuate in shape about the intervening granitic intrusions and is bounded to the south by the Paint Lake fault. The mafic metavolcanics are intercalated with felsic pyroclastic rocks. The mafic and felsic metavolcanics consist of flows, hypabyssal intrusives and tuffs along with minor metasediments.

Both belts have been intruded by pods and lenses of gabbro, diorite, granodiorite, quartz-diorite, monzonite and feldspar and quartz feldspar porphyries. Late Precambrian diabase dykes trend to the north. The metamorphic grade is commonly in the greenschist facies but may range to the amphibolite grade.

The area has received early and continued exploration commencing with iron at the turn of the century and the first well documented gold discovery in 1915 at the King Dodds occurrence. Since then 4.1 million ounces of gold have been mined from the Beardmore-Geraldton belt with production from 19 gold mines, 9 of which are located in the Geraldton area. Most of this gold was produced from high grade narrow veins. Recent exploration has been sparked by the Metalore Resources discovery on the Brook Bank zone to the west in Irwin township. The mineralization is structurally controlled within large fault and shear zones.

#### 4. SURVEY SPECIFICATIONS

##### 4.1 Instruments

The survey was carried out using a Cessna 206 aircraft, registration C-GGLS, which carries a magnetometer and a VLF electromagnetic detector.

The magnetometer is a high sensitivity airborne proton (Overhauser) type with the sensor element mounted in a towed bird at a distance of 14 metres below and 24 metres behind the aircraft. It's specifications are as follows:

Resolution:	0.01 gamma
Accuracy:	0.03 gamma for 2 readings per second
Cycle time:	0.5 second
Range:	20000-100000 gammas
Gradient tolerance:	Up to 5000 gammas per meter
Model:	GSM-11
Manufacturer:	GEM Systems Inc., 105 Scarsdale Rd., Don Mills, Ontario, M3B 2R5

The VLF-EM unit uses three orthogonal detector coils to measure (a) the total field strength of the time-varying EM field and (b) the phase relationship between the vertical coil and both the "along line" coil (LINE) and the "cross-line" coil (ORTHO). The LINE coil is tuned to a transmitter station that is ideally positioned at right angles to the flight lines, while the ORTHO coil transmitter should be in line with the flight lines. It's specifications are:

Accuracy:	1%
Reading interval:	1/2 second
Model:	TOTEM 2A
Manufacturer:	Herz Industries, Toronto

The VLF sensor is mounted in the left wing tip extension.

Other instruments are:

- . King KRA-10A Radar altimeter
- . UDAS-100 data processor with Digidata nine track tape recorder, manufactured by Urtec Ltd., Markham, Ontario.
- . Geocam video camera and recorder for flight path recovery, manufactured by Geotech Ltd., Markham, Ontario.

##### 4.2 Lines and Data

a) Line spacing:	100 metres
b) Line direction:	360 degrees
c) Terrain clearance:	100 metres

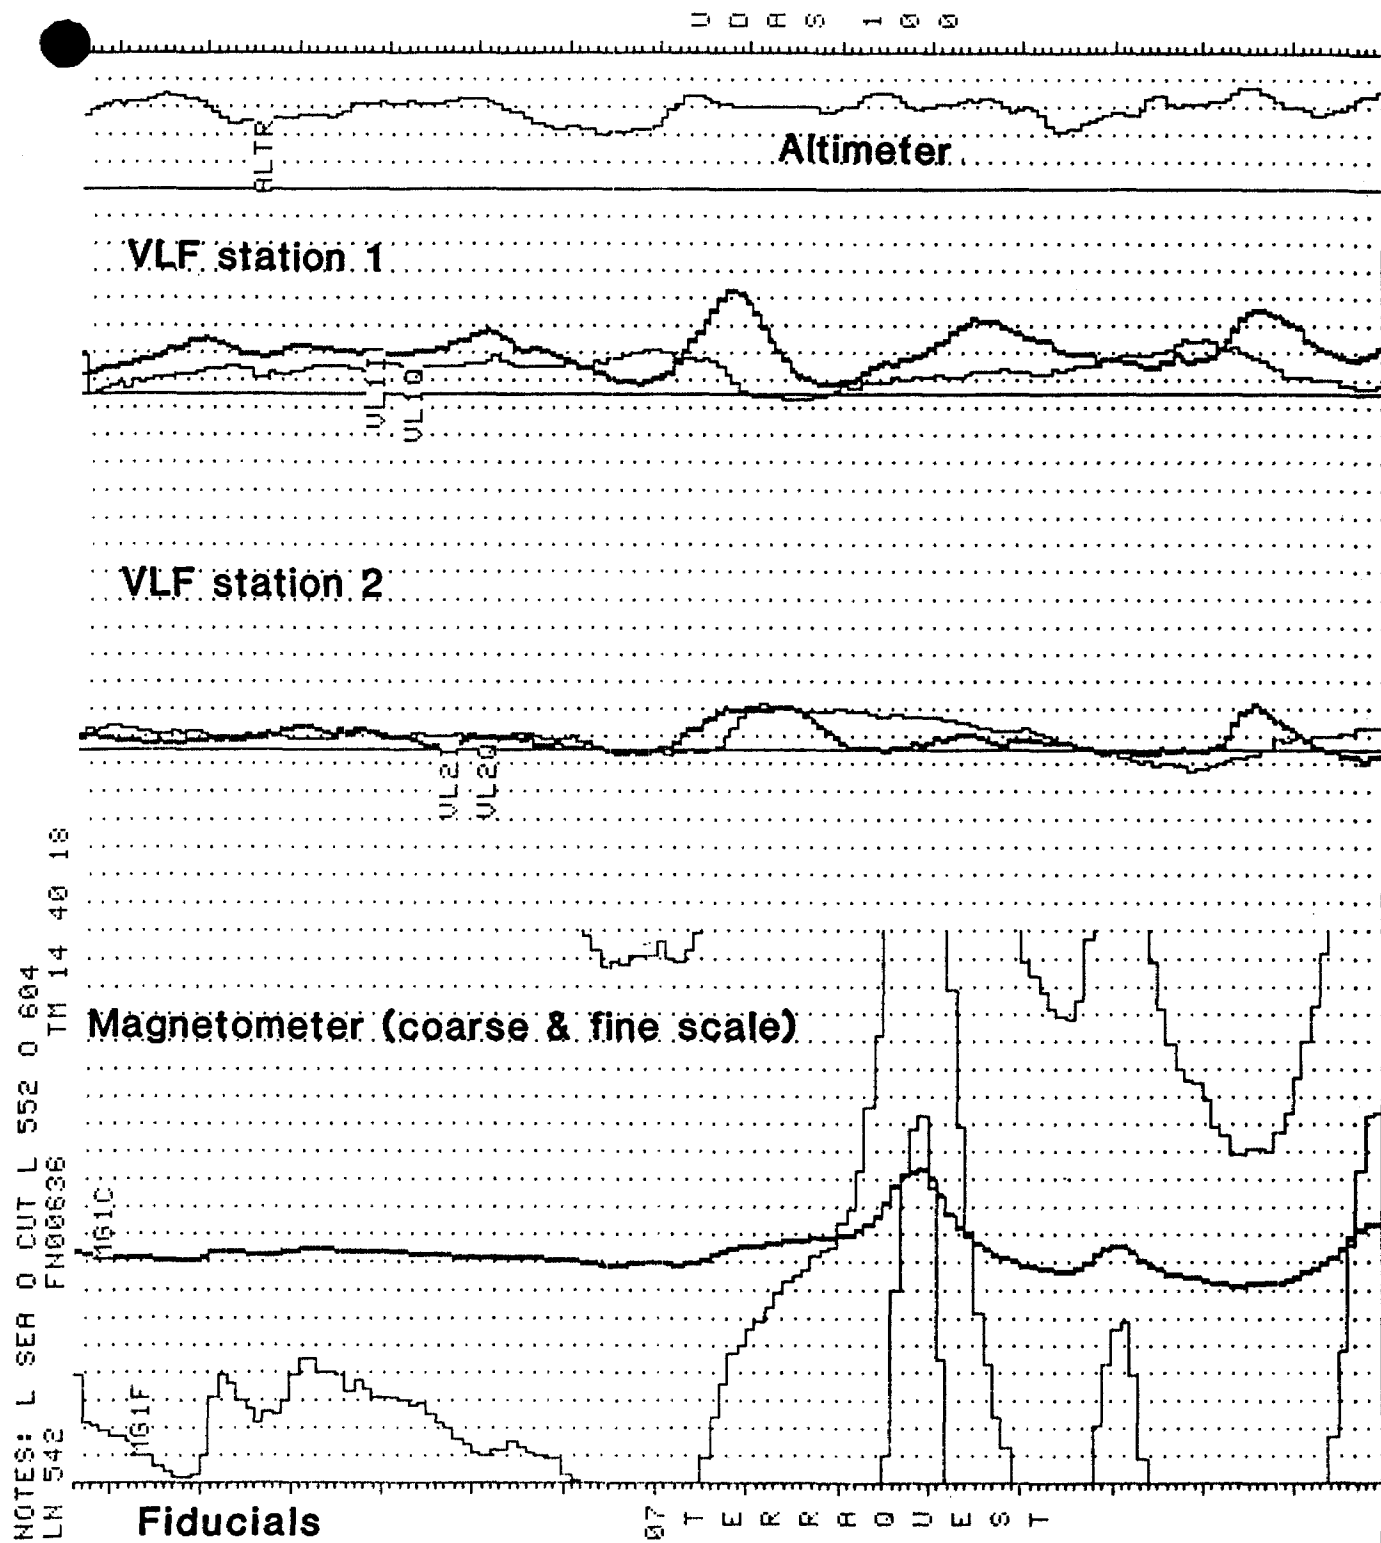

FIGURE 3. Sample of analogue data

- d) Average ground speed: 193 km/hr.
- e) Data point interval: Magnetic: 11 metres  
VLF-EM: 11 metres
- f) Tie Line interval: 2 kilometres
- g) Channel 1 (LINE): NAA Cutler, 24.0 kHz
- h) Channel 2 (ORTHO): NSS Annapolis, 21.4 kHz
- i) Line km over total survey area: 3,098 kms

#### 4.3 Tolerances

- a) Line spacing: Any gaps wider than twice the line spacing and longer than 10 times the line spacing were filled in by a new line.
- b) Terrain clearance: Portions of line which were flown above 125 metres for more than one km were reflown if safety considerations were acceptable.
- c) Diurnal magnetic variation: Less than ten gammas deviation from a smooth background over a period of two minutes or less as seen on the base station analogue record.
- d) Manoeuvre noise: nil

#### 4.4 Photomosaics

For navigating the aircraft and recovering the flight path, mosaics of aerial photographs were made from existing air photos.

### 5. DATA PROCESSING

Flight path recovery was carried out in the field using a video tape viewer to observe the flight path as recorded by the Geocam video camera system. The flight path recovery was completed daily to enable reflights to be selected where needed for the following day.

The magnetic data was levelled in the standard manner by tying survey lines to the tie lines. The IGRF has not been removed. The total field was contoured by computer using a program provided by Dataplotting Services Inc. To do this the final levelled data set is gridded at a grid cell spacing of 1/10th of an inch at map scale.

The VLF data was treated automatically so as to normalize the non conductive background areas to 100 (total field strength) and zero (quadrature). The algorithms to do this were developed by Terraquest and will be provided to anyone interested by application to the company.

All of these dataprocessing calculations and map contouring were carried out by Dataplotting Services Inc. of Toronto.

7. SUMMARY

An airborne combined magnetic and VLF-EM mapping survey has been carried out at 100 metre line intervals with data reading stations at 11 metres at 27 metres along the flight lines. All data is produced on maps at a scale of 1:10,000.

Mr. Myron Nelson  
Box 32  
Beardmore, Ontario  
P0T 1G0

Dear Sir:

RE: Mining Claims TB-926485 et al  
in the Township of Rickaby

We have not received the report and maps (in duplicate) for the Airborne Geophysical (Electromagnetic and Magnetometer) Survey on the above-mentioned claims.

As the assessment "Report of Work" was recorded by the Mining Recorder on August 11, 1987 the 60 day period allowed by Section 77 of the Mining Act for the submission of the technical reports and maps to this office will expire on October 10, 1987.

If the material is not submitted to this office by October 13, 1987 we will have no alternative but to instruct the Mining Recorder to delete the work credits from the claim record sheets.

For further information, please contact Mr. Dennis Kinvig at (416) 965-4888.

Yours sincerely,
