REPORT ON A MAGNETIC SURVEY

ANOMALY "GRID W"
BLOCK "43B/13-09"
NTS 43B/13

BY

R. FACEY-CROWTHER
THUNDER BAY, ONTARIO

NOVEMBER 1988

DECLARATION

I, Richard Facey-Crowther, certify that I completed an Honours Bachelor of Science degree (Earth Science) in 1983 from Memorial University in Newfoundland.

I have been involved in geological exploration since 1972 with The Hanna Mining Company, Gulf Minerals Canada Limited and Hudson Bay Exploration and Development Company Limited.

I am presently employed by:
Monopros Limited
1112 Russell Street, Unit 6
Thunder Bay, Ontario
P7B 5N2

LIST OF MAPS TO ACCOMPANY THIS REPORT

1. Locality map.
2. Total field magnetic readings map.
3. Total field contoured magnetic readings map.

1.0 INTRODUCTION

A programme of staking, line cutting and ground magnetometry was carried out during January, February, March and April, 1988, on a series of selected anomalies in northern Ontario. The work was performed under contract by Phantom Exploration under the supervision of Mr. I. Spence and the overall direction of Dr. J.A. Fowler. The claims are held by Dr. Fowler.

2.0 LOCATION AND ACCESS

The claims are located approximately 95 kilometres west of the community of Attawapiskat. Access to the claims is only possible by helicopter. The group of claims, referred to as "Grid W" is located within the Porcupine Mining Division.

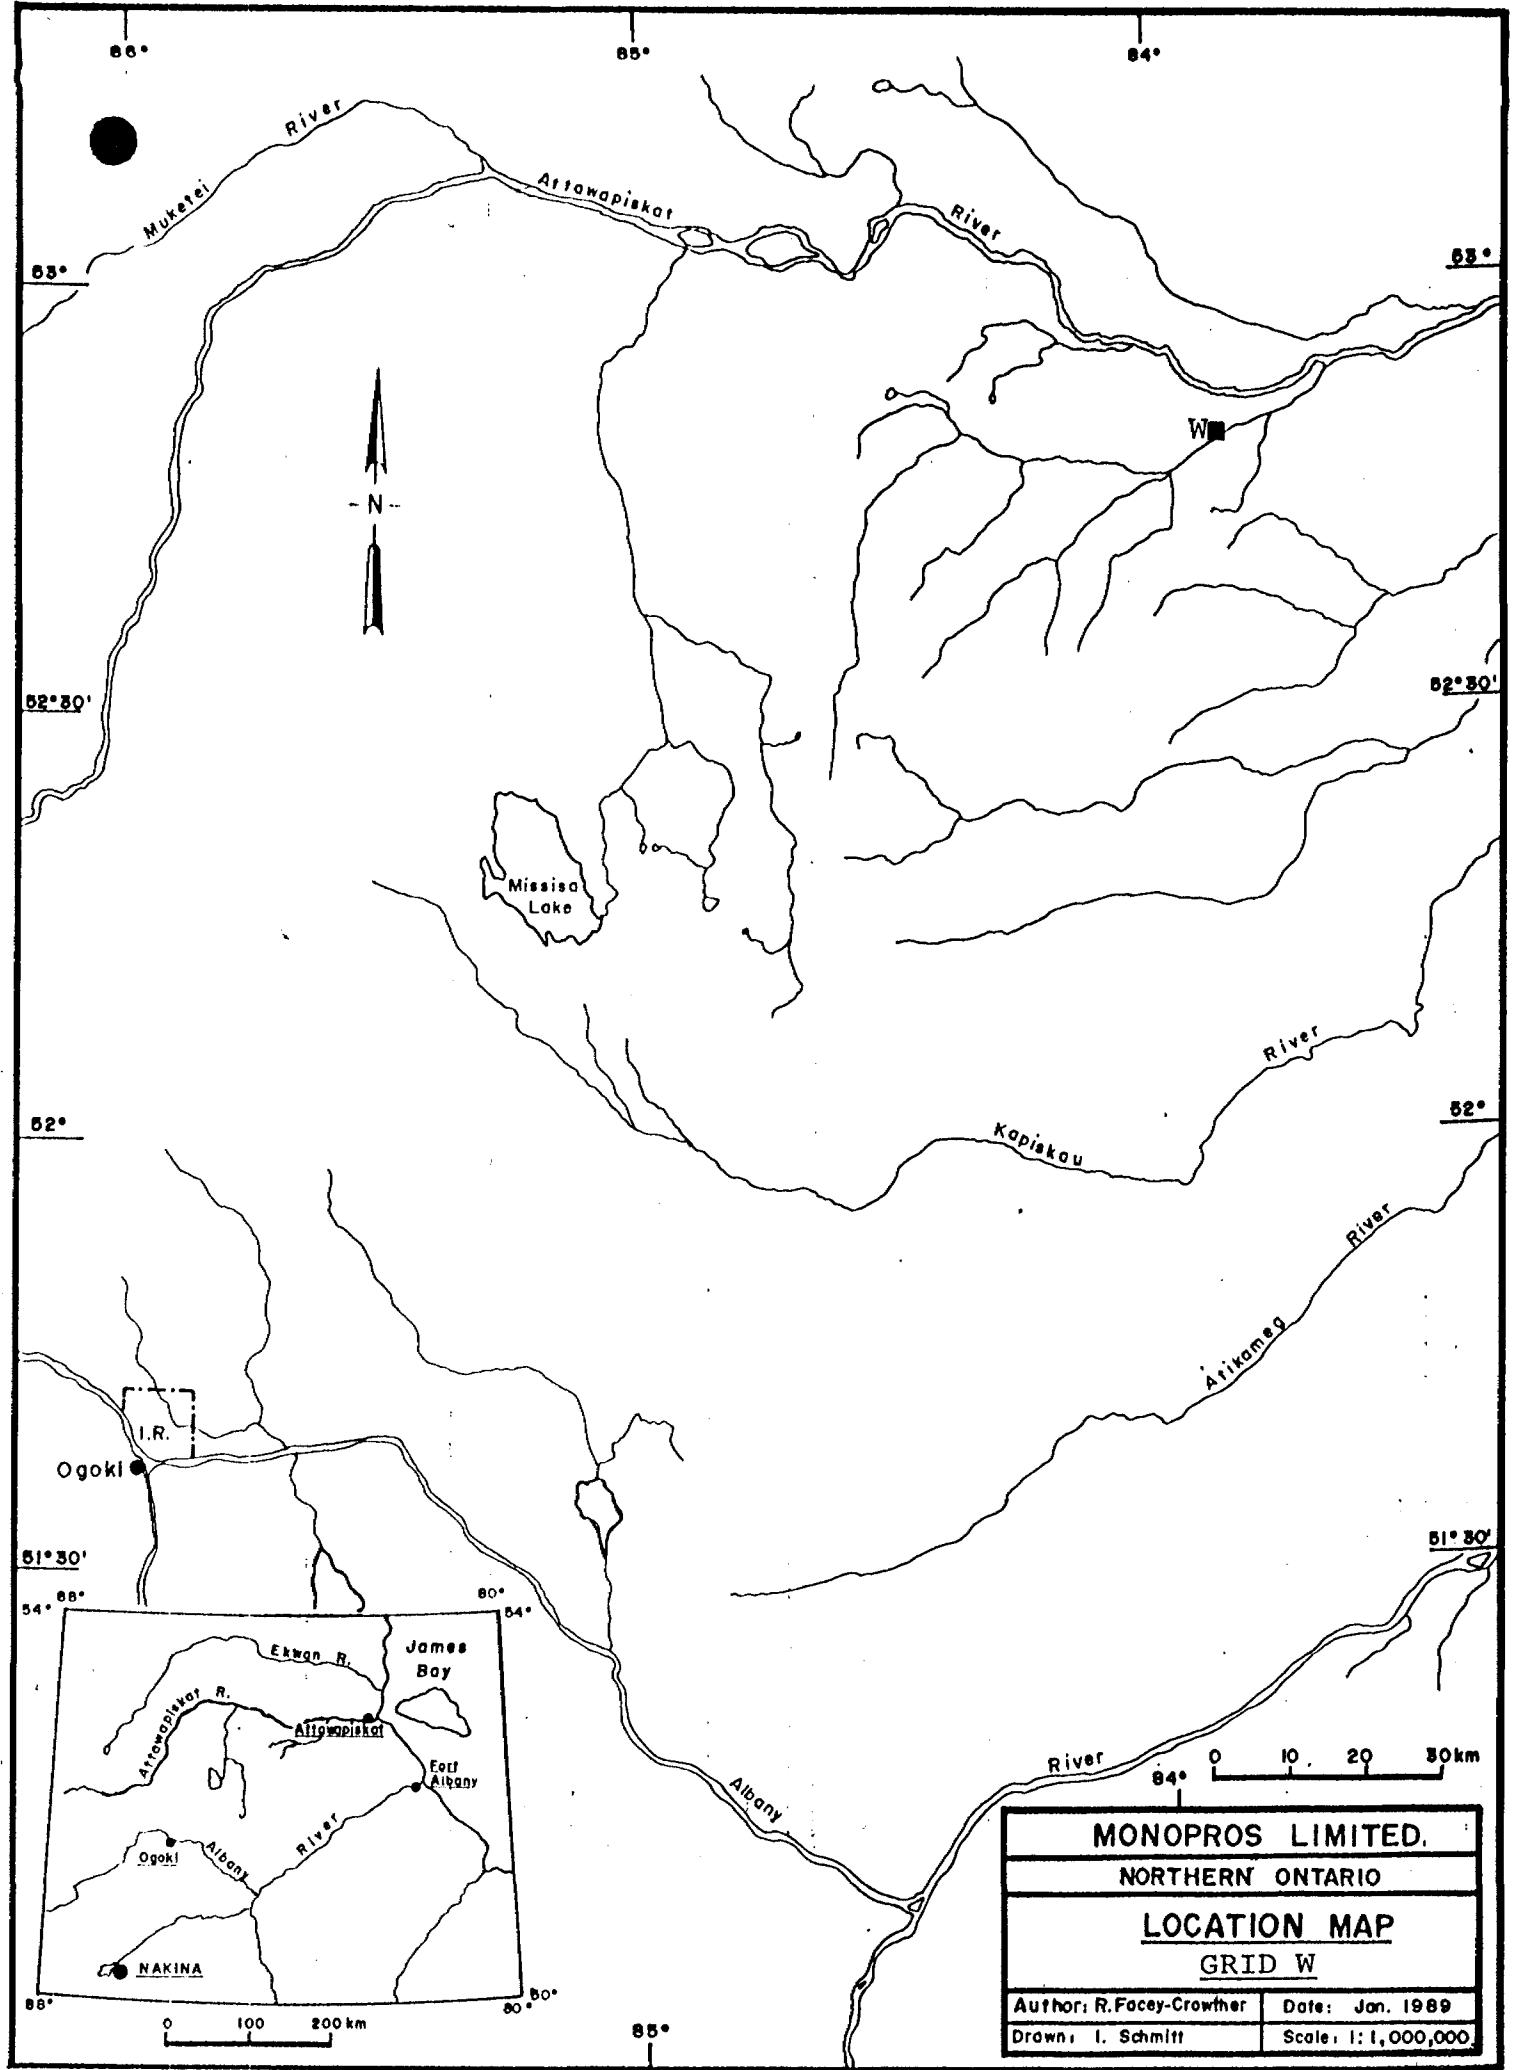

Grid W consists of a single block of 9 claims centered over a creek some five kilometres south of the Attawapiskat River on Claim map G-1253.

3.0 GROUND MAGNETIC SURVEY

Grids were cut over each claim block with a 100 metre line spacing. Each grid consisted of an east-west base line and north-south tie lines. Stations were established every 25 metres along the lines. All distances were chained out from the base line.

The magnetometer survey was carried out using EDA PPM-375 units with an EDA PPM-375 or OMNI-IV base station. The data was corrected automatically by linking the field and base station units to correct for diurnal variation. All instruments read out the total magnetic field with an accuracy of 0.1 nanoteslas (nT).

The map of total field readings shows the positions and values of the stations, while the map of contoured total field values shows the contoured results.

4.0 RESULTS

A quiet magnetic background of 59,950 nT is broken by a single small magnetic high of 60,899 nT at 4+00W 9+50N.

5.0 RECOMMENDATIONS

A single drill hole is recommended at 4+00W 9+70N to determine the source of the anomaly.

File _____

TO BE ATTACHED AS AN APPENDIX TO TECHNICAL REPORT
FACTS SHOWN HERE NEED NOT BE REPEATED IN REPORT
TECHNICAL REPORT MUST CONTAIN INTERPRETATION, CONCLUSIONS ETC.

Type of Survey(s) Ground Magnetometry
Township or Area 527 834 G-1253
Claim Holder(s) Jonathan A. Fowler

Survey Company Phantom Exploration/Monopros Limited.
Author of Report R. Facey-Crowther
Address of Author 1112 Russell St., Unit 6, Thunder Bay
Covering Dates of Survey Feb. 11/88 - Mar 31/88
(linetcutting to office)
Total Miles of Line Cut 19.2 Km

<u>SPECIAL PROVISIONS</u>	<u>CREDITS REQUESTED</u>	<u>DAYS</u> <u>per claim</u>
ENTER 40 days (includes line cutting) for first survey.	Geophysical --Electromagnetic --Magnetometer --Radiometric --Other	40
ENTER 20 days for each additional survey using same grid.	Geological Geochemical	

AIRBORNE CREDITS (Special provision credits do not apply to airborne surveys)
Magnetometer _____ Electromagnetic _____ Radiometric _____
(enter days per claim)

DATE: Dec. 21 1988 SIGNATURE: Richard Fazio-Crowther
Author of Report or Agent

GEOPHYSICAL TECHNICAL DATA

GROUND SURVEYS — If more than one survey, specify data for each type of survey

Number of Stations _____ 637 Number of Readings _____ 637
Station interval _____ 25 Metres Line spacing _____ 100 Metres
Profile scale _____
Contour interval _____ 50 nT

MAGNETIC

Instrument _____ EDA Instruments Inc. Model PPM-375/OMNI-IV
Accuracy — Scale constant _____ 0.1 nT
Diurnal correction method _____ Automatic Base Station, 20 second interval
Base Station check-in interval (hours) _____ 20 seconds
Base Station location and value _____ At base camp 3.0 kilometres north of Attawapiskat River.
52°53'00" Lat. 83°50'00" Long.; Value 59,700 nT

ELECTROMAGNETIC

Instrument _____
Coil configuration _____
Coil separation _____
Accuracy _____
Method: Fixed transmitter Shoot back In line Parallel line
Frequency _____ (specify V.L.F. station)
Parameters measured _____

GRAVITY

Instrument _____
Scale constant _____
Corrections made _____

Base station value and location _____

Elevation accuracy _____

INDUCED POLARIZATION
RESISTIVITY

Instrument _____
Method Time Domain Frequency Domain
Parameters — On time _____ Frequency _____
— Off time _____ Range _____
— Delay time _____
— Integration time _____
Power _____
Electrode array _____
Electrode spacing _____
Type of electrode _____

SELF POTENTIAL

Instrument _____ Range _____

Survey Method _____

Corrections made _____

RADIOMETRIC

Instrument _____

Values measured _____

Energy windows (levels) _____

Height of instrument _____ Background Count _____

Size of detector _____

Overburden _____
(type, depth – include outcrop map)**OTHERS (SEISMIC, DRILL WELL LOGGING ETC.)**

Type of survey _____

Instrument _____

Accuracy _____

Parameters measured _____

Additional information (for understanding results) _____

AIRBORNE SURVEYS

Type of survey(s) _____

Instrument(s) _____
(specify for each type of survey)Accuracy _____
(specify for each type of survey)
