1.0 Summary

The Bag Lake property is located in the Kenora Mining District of northwestern Ontario 20 km east of Nuinsco Resources Cameron Lake gold mine. Two significant gold occurrences have been previously identified on the property (Melling, 1989). Trenching on the East zone has exposed mineralization 2 ft thick over a strike of 170 ft which grades 0.984 oz/ton gold. Trenching on the West zone has exposed a 30 ft section of altered rocks which grade up to 0.649 oz/ton gold over 3.0 ft where mineralized. Both zones are open along strike and at depth.

This report presents the results of 1:1200 scale grid mapping on the property, encompassing the areas of previous trenching. Several new zones of gold mineralization and/or alteration have been identified which also require further exploration. The two most significant, known here as the North and South zones, returned assays up to 0.067 and 0.076 oz/ton gold respectively. A major exploration program involving additional trenching and diamond drilling is warranted. The nature and scope of this program remains to be established.

The economics of discovering a commercially viable gold deposit on Dunfrazier's property is significantly enhanced by the proximity of Nuinsco's mining operation for which a 1000 ton/per day milling facility is planned.

2.0 Introduction

Building on the results obtained by trenching in 1988 and 1989, a 1:1200 scale mapping program was initiated on the Bag Lake property of Dunfrazier Gold Exploration Inc. (Dunfrazier). Fieldwork was completed between September 25 and October 23, 1989.

An exploration grid approximately 4,900 ft by 3,000 ft was cut covering the previously trenched areas. The objectives of this work were to:

- 1) Gain insight into the possible lithological and structural controls to gold mineralization on the property by mapping the area encompassing the existing trenches;
- 2) Search for extensions of the previously discovered zones of gold mineralization;
- 3) Through systematic prospecting, attempt to discover additional zones of gold mineralization on the property.

3.0 Location and Access

The Bag Lake property comprises 66 mining claims held in good standing by Dunfrazier. It is located about 64 km by air southeast of Kenora. Access to the property is afforded by the Cameron Lake Road, a 24 km all weather gravel road running east from Provincial Highway 71, about 13 km south of Sioux Narrows (Figure 1).

The property extends from kilometre 1 to 7 and straddles the Cameron Lake Road which was constructed in 1985 by Nuinsco Resources Limited to access their Cameron Lake deposit located 18 km to the east. Currently in an advanced stage of exploration, undiluted geological reserves in the Cameron Lake deposit total 3,160,148 tons grading 0.168 oz/ton gold. Other gold occurrences in close proximity occur to the north, south, east and west of the Bag Lake property (Figure 1).

4.0 History

The Bag Lake property was originally staked in 1978 by Mr. Andy Knapp who obtained encouraging results while prospecting in the area. The property was subsequently optioned to Gulf Minerals Canada Limited who completed several hand trenches and drilled 9 holes totalling 3493 ft. Gulf decided to conduct no further work on the property which was returned along with all results to Mr. Knapp.

In 1984 Dunfrazier, under the direction of Mr. W. Cummings, optioned the property. Since then the entire property has been mapped at a scale of 1:4800 and lithogeochemical, magnetometer and induced polarization surveys have been completed over portions of the property. In 1985, 3920 ft in 10 holes were drilled by Dunfrazier and in 1986 an additional 2083 ft in 8 holes were completed. Twenty five claims were added to the group in late 1986. Two trenches were excavated in the vicinity of old Gulf holes numbers 3, 4 and 6 in 1988. In mid 1989 two additional trenches were excavated on what are now termed the East and West zones.

5.0 Mapping Program

To facilitate mapping and future drilling an exploration grid was cut on the property. Grid dimensions are approximately 4,900 ft by 3,000 ft. The base line is 4,900 ft in length. It intersects the Dunfrazier claim boundary at 27 W, has an azimuth of 135° and extends to 22 E. Grid lines were cut perpendicular to the baseline (045° Az), 1500 ft north and 1500 ft south. Towards the western extremity of the grid, south lines were terminated at the north shore of Bag Lake and the claim boundary. About 20.5 miles of grid was cut. In the central portion of the grid, between 16 W and 12 E, lines were cut at 100 ft spacings and chained at 50 ft intervals. Towards the eastern and western peripheries of the grid, lines were cut at 200 ft spacings and chained at 100 ft intervals.

5.1 Lithologies and Structure

Three major rock types occur on the property and consist of basalt, gabbro and feldspar porphyry. All rocks have been metamorphosed to greenschist facies mineral assemblages. Outcrop exposure averages about 35 percent within the grid boundaries.

Basalt flows are the most abundant rock type exposed within the map area and include pillowed and massive varieties with minor associated flow breccias. The rocks are a medium green colour, aphanitic and locally amygdaloidal. In the pillowed flows selvages are well formed and tops are consistently towards the east. This is further supported by the asymmetric distribution of amygdules within individual pillows. One occurrence of pillow shelves illustrates that bedding in the volcanic rocks strikes approximately north-south and dips about 75° E.

Gabbro comprises the second most abundant rock type within the map area. The rocks are fine to medium grained, dark green in colour and locally display a distinctive spotted texture. Locally, blue quartz megacrysts are present. The gabbro comprises in one main body about 1000 ft thick in the central portion of the map area. It intrudes the basalts and strikes roughly north-south suggesting it may be a large semi-concordant sill. The gabbro probably dips towards the east but specific measurements were not afforded.

Feldspar porphyry is the third most abundant rock type exposed within the map area. The rocks are fine to medium grained and may be pink to medium grey in colour. Locally, glassy quartz eyes are present. The feldspar porphyry occurs as dykes ranging from several inches to over 200 ft thick which intrude both the basalts and gabbro. Strikes vary between 045 and 120. Locally, branching amoeboid bodies of porphyry are present.

The rocks display a weak regional foliation which averages about 160/80° S. Locally, the rocks are sheared over narrow widths adjacent to contacts between the porphyry dykes and the mafic units. The existence of the Bag Lake Fault (Melling, 1989) has not been confirmed by this mapping program; however, it may be that it remains concealed beneath the waters of Bag Lake and the swampy area which extends towards the north. A major structure is postulated to exist along the baseline between the East and West trenches. This is supported by stronger foliation development in this area and the apparent dextral offset of the gabbroic intrusion.

5.2 Alteration and Mineralization

Extensions to the East and West zones were not discovered during mapping due largely to lack of outcrop in various key areas. Descriptions of these mineralized zones are presented by Melling (1989) and will not be repeated here.

Two new showings were discovered during mapping and are referred to here as the North and South zones. Both zones display evidence of previous work in the form of hand trenching; however, no records exist which document the date or extent of the work completed.

The North zone occurs about 300 ft north of the East trench between lines 0+00 and 1+50 W. It consists of up to 5 ft of sheared, carbonatized gabbro adjacent to its contact with a porphyry dyke. Small quartz veinlets are present and fine grained disseminated pyrite occurs in amounts up to 2 percent. Assays up to 0.061 oz/ton Au (2086 ppb) were obtained from the zone. The North zone has an orientation of about 160/80° SW and has been traced over 150 ft along strike. It is slightly oblique to the East zone.

The South zone occurs about 800 ft south of the baseline between lines 4 W and 5 E. It consists of up to 6 ft of sheared, carbonatized gabbro which has been traced over 900 ft along strike. Several quartz-carbonate veins occur locally within the zone, and fine disseminated pyrite in amounts up to 1 percent is also present. Assays up to 0.076 oz/ton Au (2616 ppb) were obtained from the zone. The south zone has an orientation of about 145/75° SW.

6.0 Conclusions

Based on the results of mapping, additional trenching on Dunfrazier's Bag Lake property is warranted. Both the newly discovered North and South zones have demonstrated gold potential and are easily accessible. This work should be completed in early 1990 after breakup prior to the initiation of the summer drilling program previously recommended (Melling, 1989).

Certificates of Qualifications

I, David Rigby Melling residing at 5216 Worthington Road,
Victoria, British Columbia, do hereby certify that:

V 8 Y 2 T 8

1. I am a consulting geologist, practising since 1987.
2. I have been employed in the study and practice of my profession since 1976.
3. I am a graduate of Carleton University, Ottawa, having received an Honours B.Sc. (geology) in 1983 and M.Sc. (geology) in 1986.
4. I am a registered Fellow of the Geological Association of Canada.
5. This report is based on personal experience on the Bag Lake property, and from working in the Kenora Mining District since 1983.
6. I have no interest in, nor do I expect to receive any interest, direct or indirect, in Dunfrazier Gold Exploration Inc.
7. I consent to and authorize the use of this report and my name to a statement of material facts and other public documents.

Dated in Victoria this 1st day of November, 1989.

Dear Sir:

**RE: REVISED ASSESSMENT WORK CREDIT FORM FOR MINING CLAIMS K535352 ET AL.
IN THE DOGPAW LAKE AREA.**

As per your request, the Assessment Credits on mining claims K. 487025 and K. 487035 have been altered to reflect the application of \$ 2,000.00 to claim K. 487035. This is the maximum allowable advance application as per subsection 4(5) of the Mining Act Regulations.

If you have any questions please contact Clive Stephenson at (705) 670-7251.

Yours sincerely,

For Ron C. Gashinski
Senior Manager, Mining Lands Branch
Mines and Minerals Division

P9N 3X9

Dear Sir:

RE: APPROVAL OF A GEOLOGICAL SURVEY ON MINING CLAIMS K535352 ET AL. IN
THE DOGPAW LAKE AREA.

The assessment credits for a Geological Survey, Section 12 of the Mining Act Regulations, as listed on the attached Assessment Work Credit Form, have been approved as of March 9, 1992.

As outlined in the Notice of Deficiency dated January 21, 1992, a portion of the work submitted would be eligible for credit at a rate of 100% of the cost as it would have been filed less than two years from the date of its completion. The information that was supplied indicates that a total of \$ 1,317.64 was for the period October 24-27, 1989 and pertained to costs incurred in the writing of the report. The total of \$ 12,765.00, as outlined in the Notice, already includes 50% of the above report writing costs, so an additional 50% or \$ 658.82 will be allowed.

The total approved for this submission is now \$ 13,423.82 (\$ 13,424.00 rounded off) and as such I have made some small alterations to the allocation of credit schedule supplied by M. Ogden. I have also bypassed the application of any credits to the reserve and applied it directly on the claims requested. Putting it in the reserve, then applying it, would require the filling out of another Report of Work form by the client and consequent processing by the Mining Recorder.

Mining Act/Loi sur les mines

Transaction No./N° de transaction

REF: DUNIPRA 2112R
1989 DIETAM 6104

Personal information collected on this form is obtained under the authority of the Mining Act. This information will be used to maintain a record and ongoing status of the mining claim(s). Questions about this collection should be directed to the Provincial Manager, Minings Lands, Ministry of Northern Development and Mines, 4th Floor, 150 Cedar Street, Sudbury, Ontario P3E 6A5, telephone (705) 670-7264.

Les renseignements personnels contenus dans la présente formule sont recueillis en vertu de la Loi sur les mines et serviront à tenir à jour un registre des concessions minières. Adressez toute question sur la collecte de ces renseignements au chef provincial des terrains miniers, ministère du Développement du Nord et des Mines, 150, rue Cedar, 4^e étage, Sudbury (Ontario) P3E 6A5, téléphone (705) 670-7264.

1. Direct Costs/Coûts directs

Type	Description	Amount Montant	Totals Total global
Wages Salaires	Labour Main-d'oeuvre		
	Field Supervision Supervision sur le terrain		
Contractor's and Consultant's Fees Droits de l'entrepreneur et de l'expert- conseil	Type LAMP CUTTING	9,238.6	
	CONSULTING FEES	11,950	
	ASSAYS	190	21,278
Supplies Used Fournitures utilisées	Type		
Equipment Rental Location de matériel	Type		
Total Direct Costs Total des coûts directs			21,278

2. Indirect Costs/Coûts indirects

** Note: When claiming Rehabilitation work Indirect costs are not allowable as assessment work.
Pour le remboursement des travaux de réhabilitation, les coûts indirects ne sont pas admissibles en tant que travaux d'évaluation.

Type	Description	Amount Montant	Totals Total global
Transportation Transport	Type TRUCK RENT	1140

Total Value of Assessment Credit (Total of Direct and Allowable Indirect costs)			25,531
Valueur totale du crédit d'évaluation (Total des coûts directs et indirects admissibles)			25,531

Note: The recorded holder will be required to verify expenditures claimed in this statement of costs within 30 days of a request for verification. If verification is not made, the Minister may reject for assessment work all or part of the assessment work submitted.

Note: Le titulaire enregistré sera tenu de vérifier les dépenses demandées dans le présent état des coûts dans les 30 jours suivant une demande à cet effet. Si la vérification n'est pas effectuée, le ministre peut rejeter tout ou une partie des travaux d'évaluation présentés.

Filing Discounts

1. Work filed within two years of completion is claimed at 100% of the above Total Value of Assessment Credit.
2. Work filed three, four or five years after completion is claimed at 50% of the above Total Value of Assessment Credit. See calculations below:

Total Value of Assessment Credit	Total Assessment Claimed
	× 0.50 =

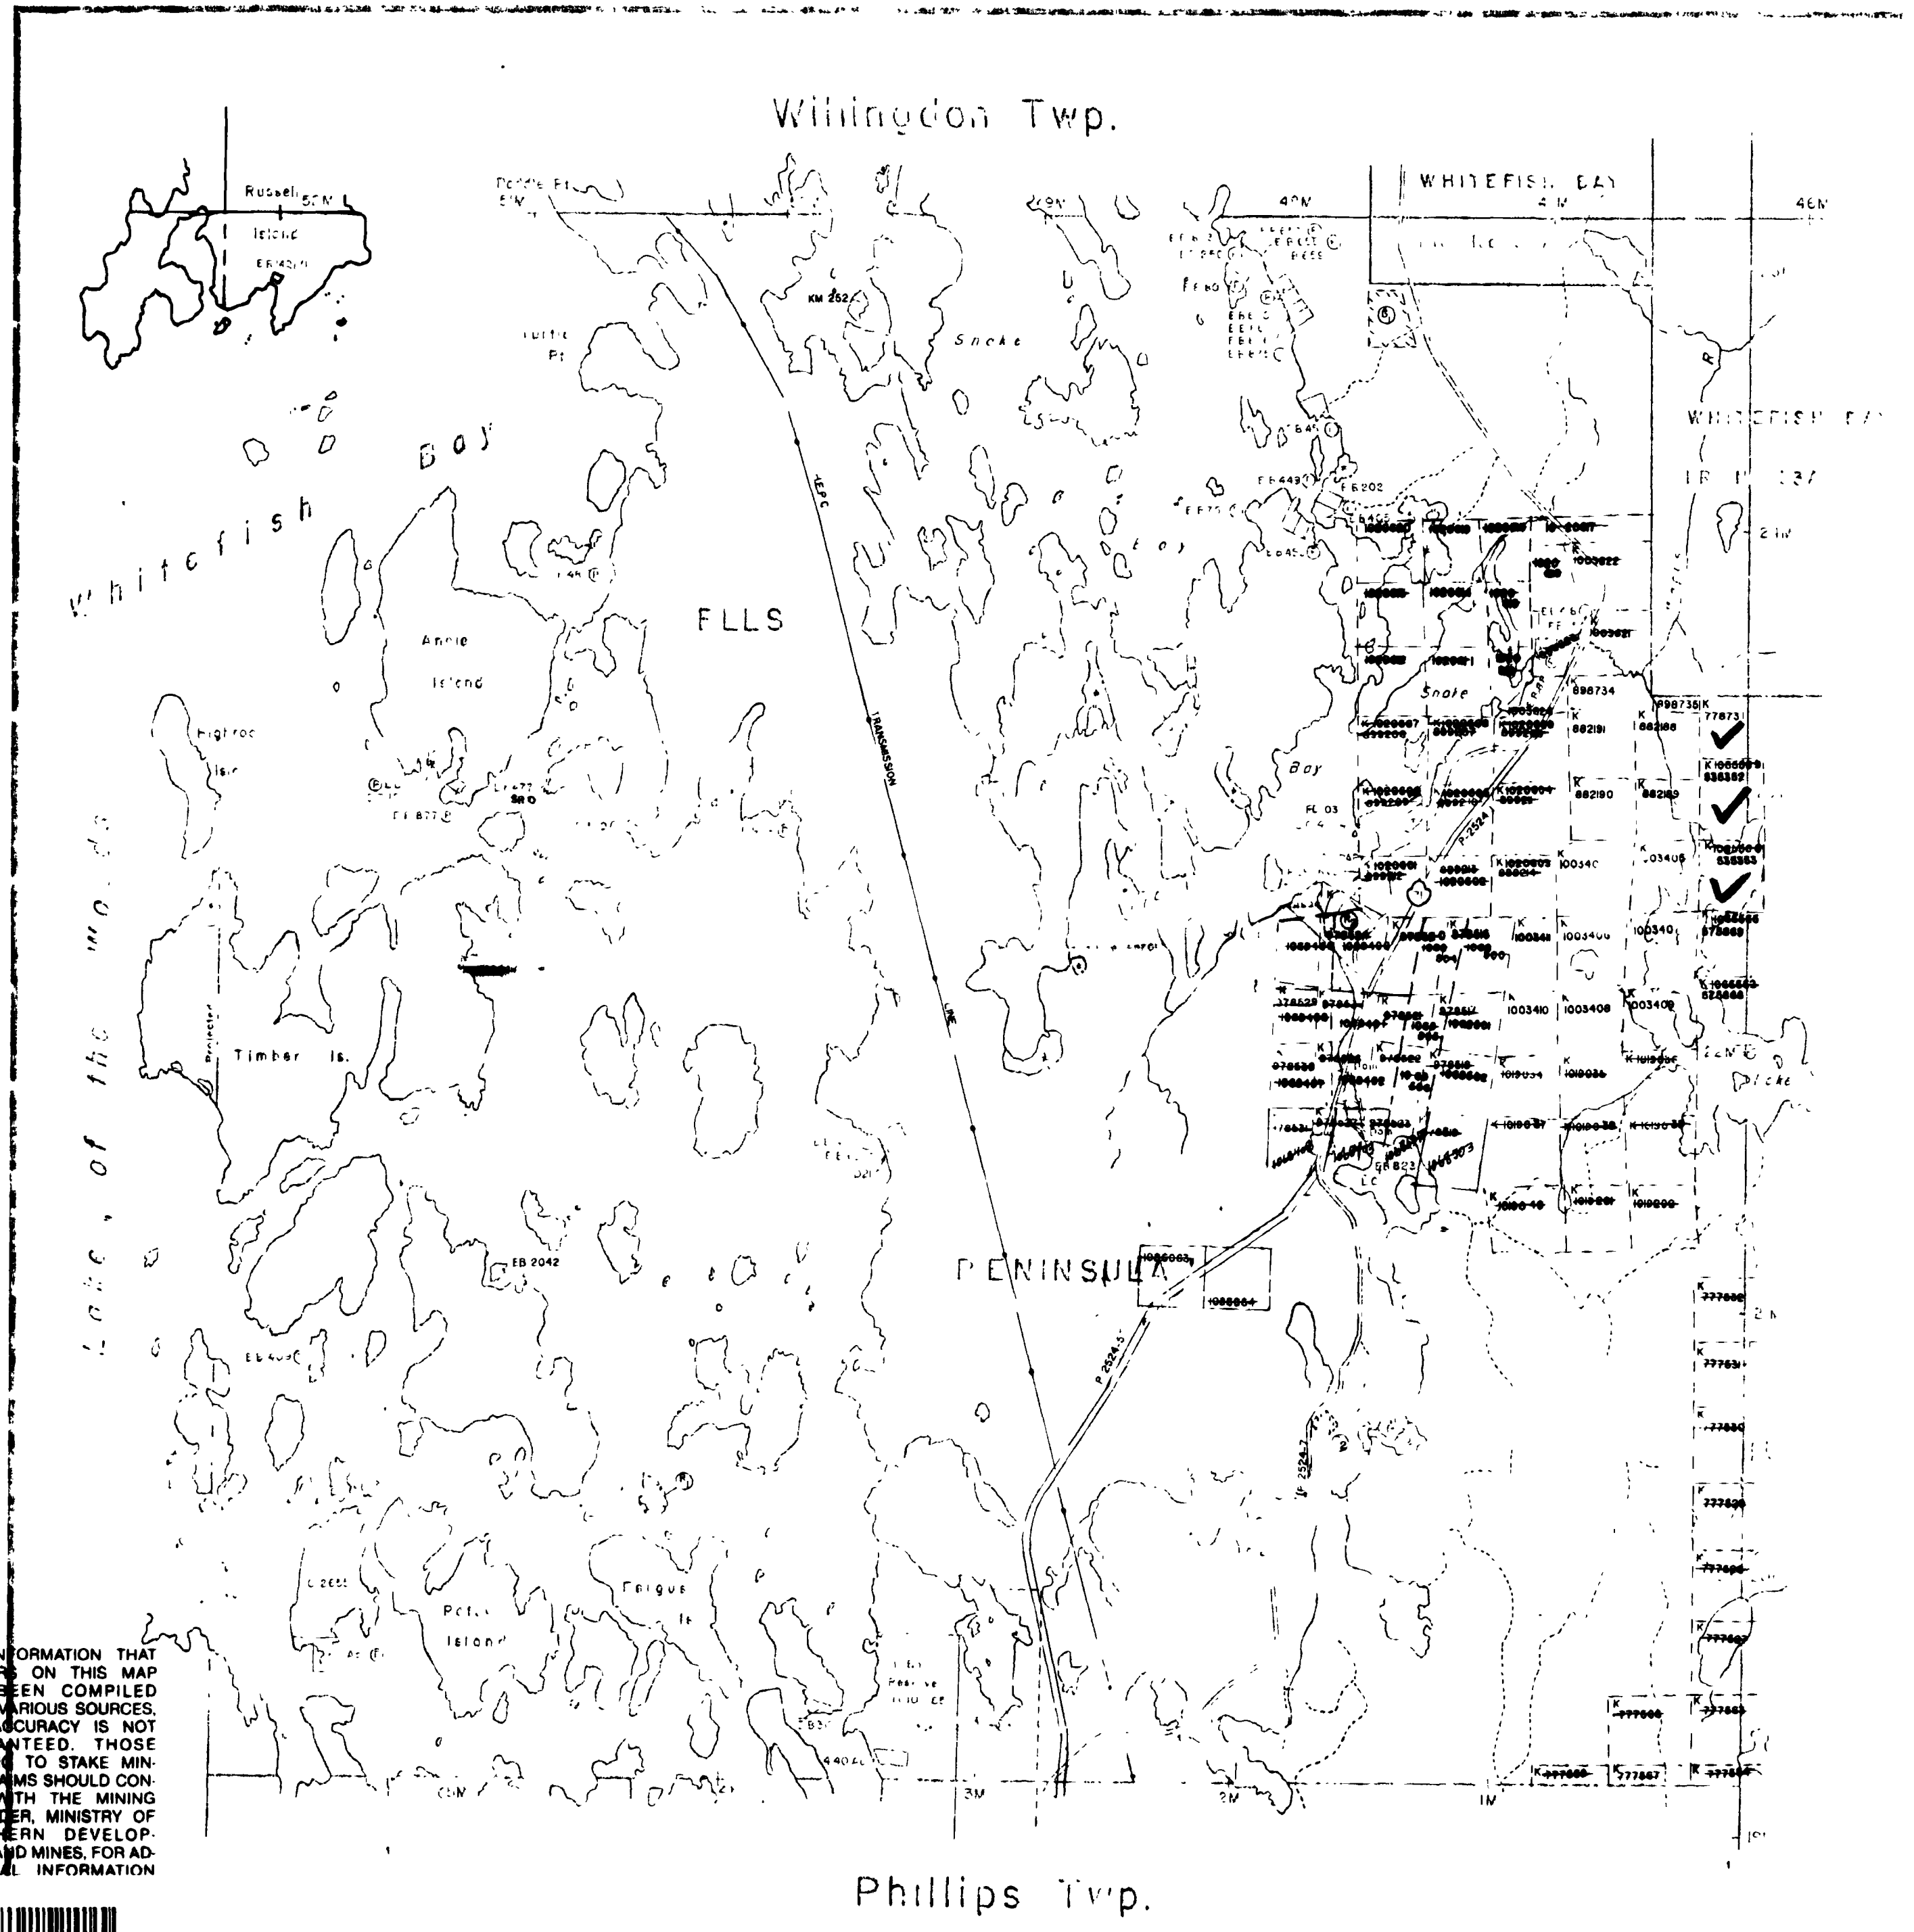

Remises pour dépôt

1. Les travaux déposés dans les deux ans suivant leur achèvement sont remboursés à 100 % de la valeur totale susmentionnée du crédit d'évaluation.
2. Les travaux déposés trois, quatre ou cinq ans après leur achèvement sont remboursés à 50 % de la valeur totale du crédit d'évaluation susmentionné. Voir les calculs ci-dessous.

Valeur totale du crédit d'évaluation	Evaluation totale demandée
	× 0,50 =
