2. Sundry receipts totalling \$74.41 for gasoline (\$25.00) , meal (\$6.85) and lodging (\$42.56)

REVELL TOWNSHIP PROJECT

I

I. INTRODUCTION

This report serves to summarize the results of a humus sampling program done in September, 2001 on claim 1149795 in Revell Township. This was done to follow up the results of a bedrock sampling program done in 1999 which confirmed the presence of platinum, palladium and gold mineralization in a mineralized zone located in a small outcrop which is 250 metres west of the swamp section covered in the current work.

2. LOCATION and ACCESS

Claim 1149795 is located ^{approximately} ~~approximately~~ 55 kilometres east of Dryden, Ontario, in the central part of Revell Township between the CPR Railway and the Trans-Canada Highway. This claim is accessible from the Highway via the Basket Lake Forest Access Road. The NTS is 52F/9SE.

3. PROPERTY DEFINITION

Claim 1149795 consists of two claim units which covers about 80 acres in area. Revell Township is surveyed and claim 1149795 is in the south half of the north part of Lot 7, Concession 4 of the Township. The claim is in good standing until September 29, 2001.

4. CURRENT WORK

Work in the current program involved the collection and analysis of 17 samples of humus from the swamp area which is found to the east of a small mineralized outcrop. The samples were taken from the black, organic material that exists in a layer from 2 cm to 10 cm in thickness in the swamp area. The samples were taken in a north-south cross-section across 170 metres of swamp at 10 metre intervals. See Figure 3 for location of this work.

Prior to the sampling a line extending 160 metres north of the 400 metre line post was picketed and flagged at 10 metre intervals. The samples collected being saturated with swamp water were then dried at room ^{temperature} ~~temperature~~ for two days and then delivered to the Thunder Bay preparatory Lab of ALS Chemex.

REVELL TOWNSHIP PROJECT

2

5. ASSAYING PROCEDURES

The 17 samples of humus described above were all analyzed by ALS CHEMEX using two separate analytical procedures. The first of these two was the PGM-MS23 package which is a custom designed program for gold, platinum and palladium using fire assay and ICP.

The 17 samples were also analysed using the ME-MS41 ALS Chemex procedure for 33 elements by aqua regia digestion and a combination of ICP -MS and ICP-AES.

6. RESULTS OF SAMPLING

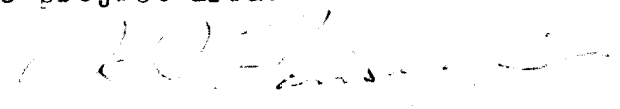

The objective of this work was to determine any indication of an extension of the known mineralization located 250 metres west by sampling a north -south cross-section of the swamp by using humus sampling as the medium.

The sampling program did show (see figures 3 & 4) that elevated platinum and anomalous gold were found in the samples. However this is not conclusive evidence that mineralized zones may be found under this swamp cover and further work is required.

7. RECOMMENDATIONS

The following work is recommended for this area.

1. Grid construction to the east and north of the known mineralization.
2. Further humus sampling over the grid area.
3. An. I. P. Survey over the project area.

Dear Sir or Madam

Subject: Approval of Assessment Work

We have approved your Assessment Work Submission with the above noted Transaction Number(s). The attached Work Report Summary indicates the results of the approval.

At the discretion of the Ministry, the assessment work performed on the mining lands noted in this work report may be subject to inspection and/or investigation at any time.

If you have any question regarding this correspondence, please contact LUCILLE JEROME by email at lucille.jerome@ndm.gov.on.ca or by phone at (705) 670-5858.

Yours Sincerely,

Ron Gashinski
