## INTRODUCTORY SUMMARIES

### History of Property

The claims encompass the old Rognon Mine. Production between 1916 to 1918 was 22.2 ounces of gold and  $\frac{1}{2}$  ounce of silver from 49 tons milled. Developments are reported to be a shaft 106 feet deep with 307 feet of lateral work on two levels, including a raise "shaft" to surface from the first (50 foot) level. Stripping and pitting was extensive over the vein length of 1500 feet. Adjoining patented claims on the north share the main vein. They (Wachman Mine) produced 8 ounces of gold and 34 ounces of silver from 34 tons milled. The old Wachman Mine shaft is about 200 feet along strike from where it crosses onto claim K 706195. Other property veins were reported to contain molybdenite and chalcopyrite.

### Summary of Work Performed

Primary thrust of current work was to find gold with accessory enrichment in silver, copper, and molybdenum in selected areas. The project was approved for government assistance as OMEP Program OM83-3-1-50. Much of the time and effort was spent on cleaning overgrown trenches of forest litter, shrubs, and saplings. Seventy-five samples were assayed, 40% for minerals in addition to gold.

### Findings

Although the property shows extensive previous work in the form of trenches, shafts, and buildings, I can not discover its justification by the "old-timers". Never-the-less, two short sections in the vicinity of stations E2 and W9 hold some prospect for selective small-tonnage open-cut shipments to a custom mill with gold at high prices. The underground workings still need

to be examined. Old reports mention plans were made to mill 400 tons. However, I am not overly optimistic as to the validity of this plan since widespread, cumulative, representative grab samples of quartz stockpiled at the shaft's openings gave but 0.006 and 0.014 ounces of gold per ton (samples #30 and #31). Further, since nothing of significance has been uncovered on the easterly of the two claims, current assessment work will be transferred to the westerly claim (K 706195), title to the easterly claim allowed to lapse.

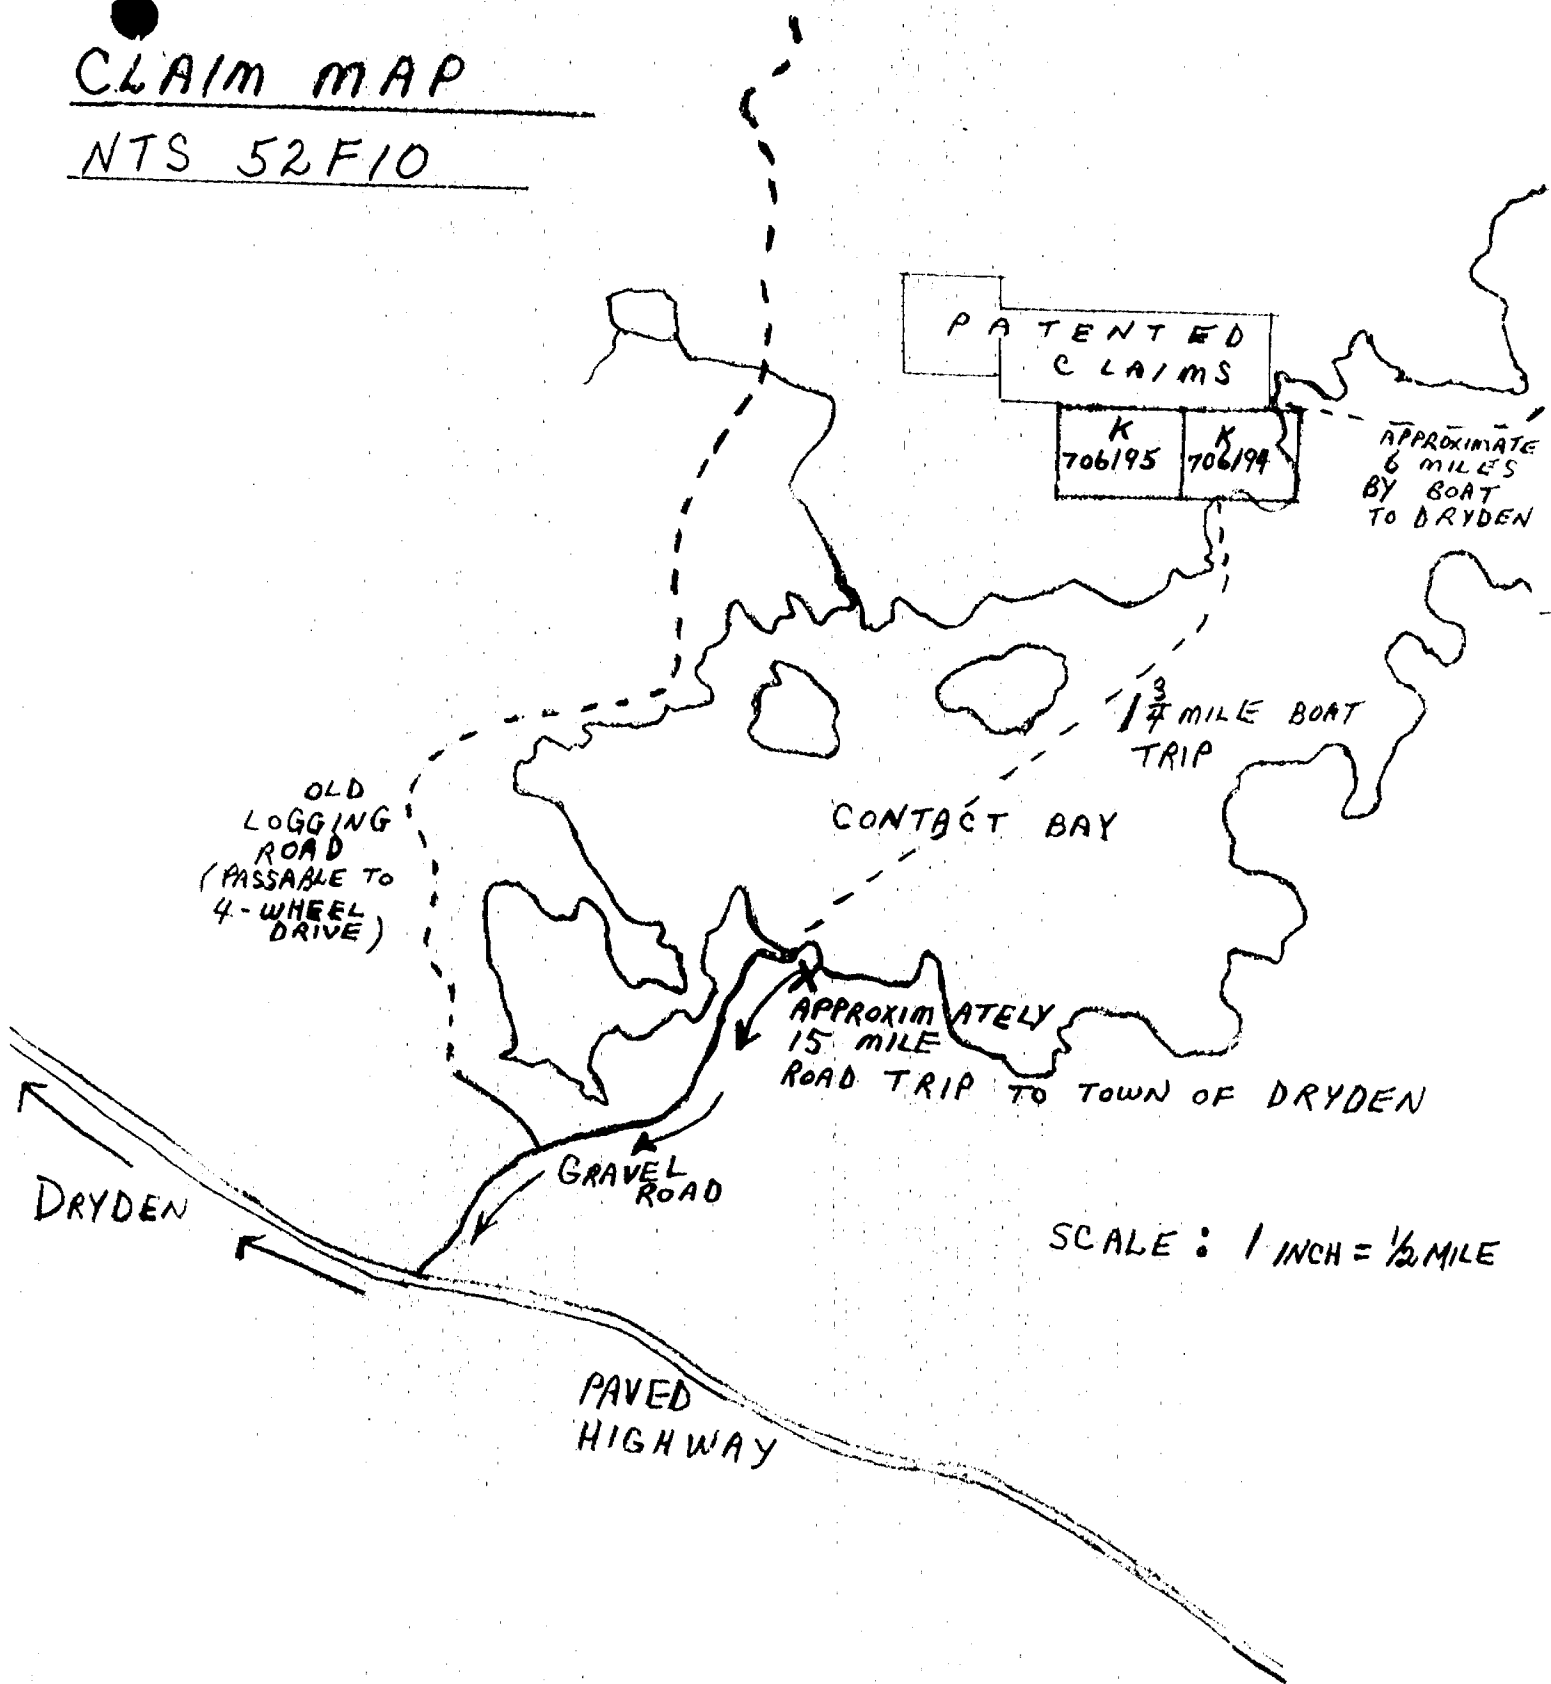

Author's Qualifications

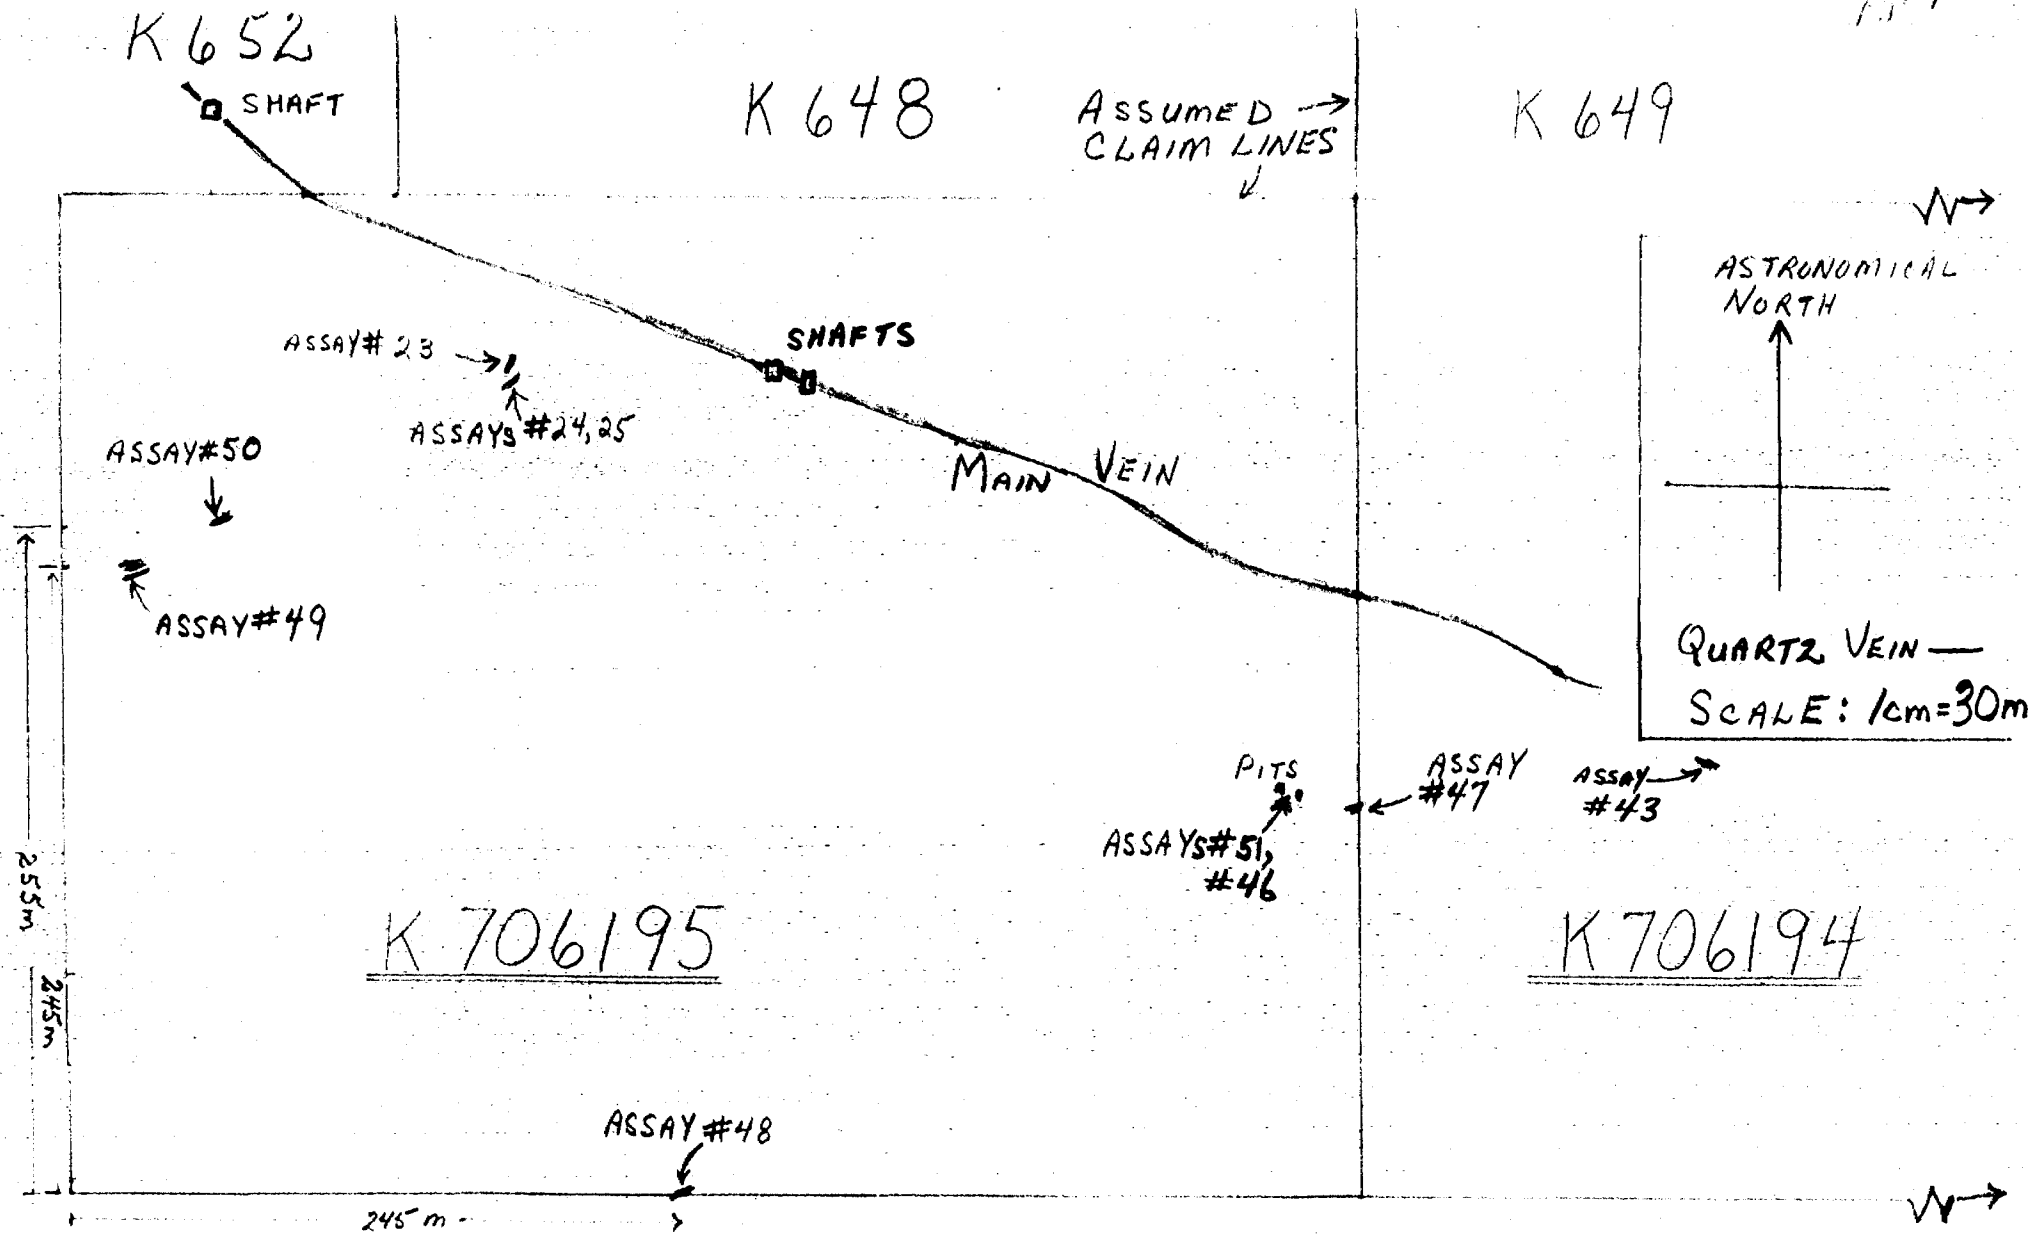

From past experience, my qualifications as author of a technical report will need explanation. I do not hold the usual documentation, but in the past my submissions have qualified as being "satisfactory to the Minister". For reference to past assessment filings and a personal resume, refer to MNR file #2.4418 re: claim K 589052.

Dear Sir:

We have received data for Assaying submitted under Section 77(19) of the Mining Act R.S.O. 1980 for Mining Claim K 706195 in the Area of Contact Bay.

This material will be examined and assessed and a statement of assessment work credits will be issued.

Yours very truly,

I.F. Anderson  
Director  
Land Management Branch
