LOCATION

The property is located approximately 0.6 miles east north east of Highway 502 about 35 miles from Dryden. Peak Lake is about 1/8 mile east of the main showing.

Access is achieved by walking from the highway along claim lines directly behind E. Starr's showing on the highway. Another access route is by canoe along Peak Lake which can be reached by a short portage from the highway.

The occurrence is located on claim map M 2663 in the District of Kenora. The claim (589502) is owned by Wm. J. Sovereign.

HISTORY

Wm. J. Sovereign staked this claim January 11, 1981, covering to a large degree formerly patented claim K.624. No records of past work apparently exist due to the fact work was done back in 1914 to 1917. An overgrown trench and pits were discovered on the property.

GEOLOGY

The following is close to a facsimile of a section from the report "Peak Lake Property Preliminary Geological Report" by Peter Hannigan, a geologist who examined the showing.

The claim is underlain by mafic tuffs with felsite porphyry dikes scattered randomly. The property is located on the northwest flank of an anticline known generally as the Manitou Anticline.

The showing is on a cliff face about 300 feet east of a small lake directly west of Peak Lake. It consists of a north-south general trending quartz vein that pinches and swells. The vein occurs within a well-foliated greenstone that is altered in parts. A porphyry dike is associated with the showing. Chalcopyrite is present in trace amounts, principally in the quartz.

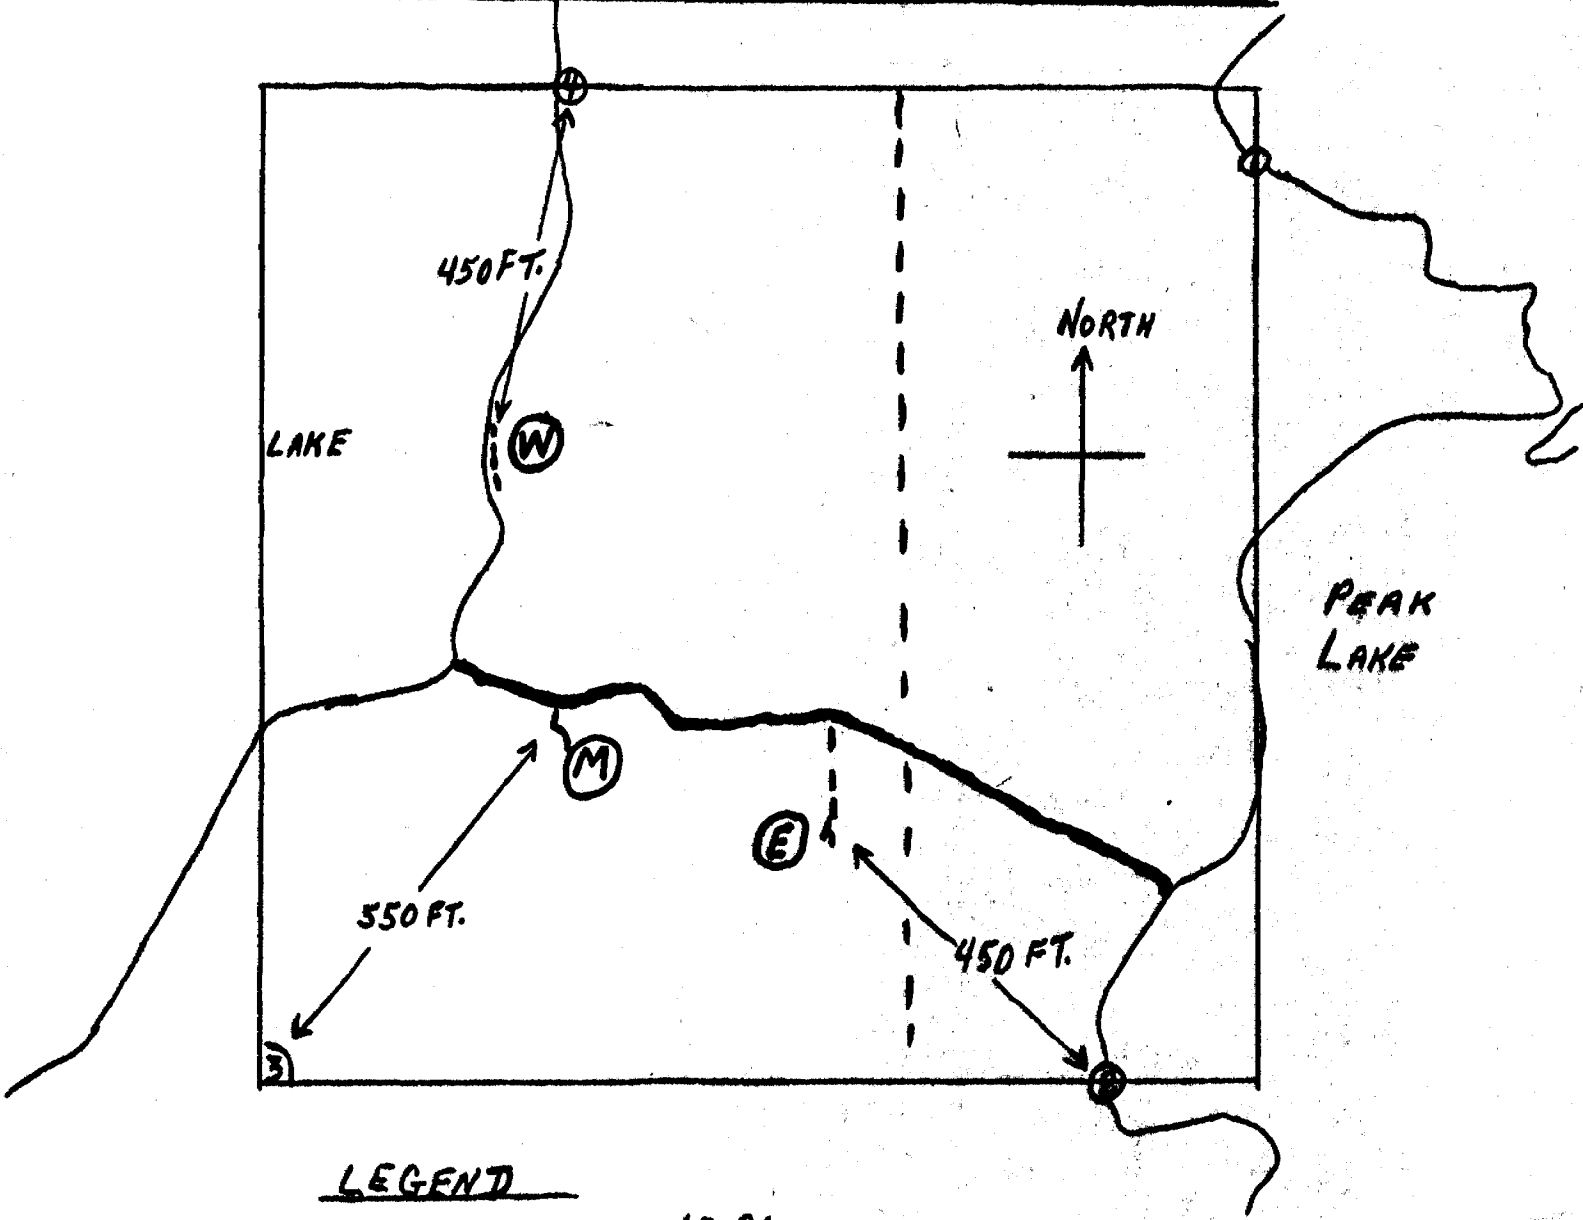

PRESENT WORK

Wm. J. Sovereign did some stripping and cleaning of the overgrown trench and pits this summer. Numerous grab and chip samples were taken. Some assays were quite impressive: 4.85, 3.28, 3.42, 6.8, 2.3, .55, .37, and .17 oz./ton gold. Two samples were also submitted for spectographic analysis for 30 elements; no significant values were reported.

On October 27, 1981, a geologist, Peter Hannigan, working out of the Dryden Office of Sherritt Gordon Mines Limited, visited the claim. Two chip samples were taken which gave low values. However, three of four grab samples gave more promising values: .556, .07, and .11 oz./ton gold. These samples contained low silver values: respectively .07, .03, .08 oz./ton.

Mr. Hannigan recommended that further chip sampling should be performed and that substantial stripping should be attempted to the south.

SUMMARY OF GRAB AND CHIP SAMPLING

West Showing (Location reference page 3)

The samples were made from numerous small random quartz viens in a ledge running along the shore.

References are Reports B13511 and C21284.

#3 gold <.01 oz/ton

#4 silver <.10 oz/ton, cobalt <5ppm, copper 70ppm
lead <10ppm, zinc 26ppm.

East Showing (Location reference page 3)

Samples were taken from the vein, about 2 inches wide, of unknown length.

Reference is Report B13649.

#9 gold .01 oz/ton

Main Showing (Location reference page 5)

Samples were taken from the vein, running approximately 5 to 20 inches wide, and from the rock pile.

<u>Sample</u>	<u>Report Number</u>	<u>Analysis</u>	<u>Results</u>

**Mining Recorder
Ministry of Natural Resources
808 Robertson Street
Box 5160
Kenora, Ontario
P9N 3X9**

Dear Sir:

Enclosed are two copies of a Notice of Intent with statements listing a reduced rate of assessment work credits to be allowed for a technical survey. Please forward one copy to the recorded holder of the claims and retain the other. In approximately fifteen days from the above date, a final letter of approval of these credits will be sent to you. On receipt of the approval letter, you may then change the work entries on the claim record sheets.

Yours very truly,

**For further information, if
required, please contact
Mr. F.W. Matthews at

Resources

Notice of Intent
for Technical Reports

1982 11 08

2.4418

An examination of your survey report indicates that the requirements of The Ontario Mining Act have not been fully met to warrant maximum assessment work credits. This notice is merely a warning that you will not be allowed the number of assessment work days credits that you expected and also that in approximately 15 days from the above date, the mining recorder will be authorized to change the entries on his record sheets to agree with the enclosed statement. Please note that until such time as the recorder actually changes the entry on the record sheet, the status of the claim remains unchanged.

If you are of the opinion that these changes by the mining recorder will jeopardize your claims, you may during the next fifteen days apply to the Mining and Lands Commissioner for an extension of time. Abstracts should be sent with your application.

If the reduced rate of credits does not jeopardize the status of the claims then you need not seek relief from the Mining and Lands Commissioner and this Notice of Intent may be disregarded.

If your survey was submitted and assessed under the "Special Provision-Performance and Coverage" method and you are of the opinion that a re-appraisal under the "Man-days" method would result in the approval of a greater number of days credit per claim, you may, within the said fifteen day period, submit assessment work breakdowns listing the employees names, addresses and the dates and hours they worked. The new work breakdowns should be submitted direct to the Lands Management Branch, Toronto. The report will be re-assessed and a new statement of credits based on actual days worked will be issued.

a report comparable to a geologist/pro prospector
etc. you may do so."

About two weeks ago I phoned your office for clarification of your letter of July 7. At that time I informed you that I was not acquainted well enough with anyone in the mining field who could verify my competence as a prospector. Therefore, I was told to submit a letter to illustrate competence through comparable abilities and to give a reference.

In 1969 I obtained my B.A. (Economics) from Lakehead University, Thunder Bay. Since graduation I have been continuously employed as a teacher with the Dryden Board of Education. For four years I was also a principal of one of the Board's schools, now closed. For reference contact my last year's principal, Mr. S. Case, 151 Pitt Avenue, Dryden, Ontario.

Yours sincerely,
Wm. J. Sovereign

Freed

Mr. Sweeney's report is not a geological report, but a report on assay work and is acceptable as such. His teaching qualifications have nothing to do with this. I would recommend allowance of the 77(19) part only.

I discovered that it was likely the recorder in Kenora who advised him.

Dear Sir:

We have received data for Assaying submitted under Section 77(19)
of the Mining Act R.S.O. 1980 on Mining Claim K.589052 in the
Area of Turtlepond Lake.

This material will be examined and assessed and a statement
of assessment work credits will be issued.

Yours very truly,

E.F. Anderson
