Introduction :

This report presents a brief regional geological description and geochemical analysis of the rocks exposed in 3 showings and along road cuts on Pipestone South property. During the month of August 2002, a 9-day physical stripping, trenching, and channel sampling program was completed. Included is a breakdown of the type of equipment used, the hours and dates that the equipment was used, the man-hours that were spent on this program and a map showing the locations of the stripped areas and significant results.

Geological Description :

The Red Lake greenstone belt records a 300 million year history of episodic volcanism, sedimentation, deformation, and mineralization. The Balmer assemblage, host to current and past-producing gold mines, consists of tholeiitic and komatiitic lava flows, ultramafic intrusive rocks, intercalated with 2.98-2.96 billion year old (Ga) felsic volcanic, clastic, and chemical sedimentary rocks. The Ball assemblage comprises crustally contaminated komatiite, tholeiitic basalt, 2.94-2.92 Ga calc-alkaline, felsic volcanic rocks, and stromatolitic carbonate. The Slate Bay assemblage of quartz-rich wacke and conglomerate, with an age less than 2.91 Ga, records accumulated Balmer-age material, prior to the 2.89 Ga intermediate pyroclastic volcanism and sedimentation of the Bruce Channel assemblage. The Confederation assemblage rests unconformably on the Balmer, and consists of basal conglomerate, 2.74 Ga FIII-type rhyolite, tholeiitic basalt with volcanogenic-massive-sulphide-style alteration-mineralization, and 2.73 Ga calc-alkaline pyroclastic rocks. Polyphase deformation involved pre-Confederation tilting and at least two episodes of post-Confederation deformation reflected in folds and fabrics of low to moderate finite strain. (See Figure 1)

The rocks that were exposed on the property are assigned to the Ball assemblage. Figure 4 shows the location of the area stripped.

Physical Stripping, and channel sampling:

The location of stripping was based on reconnaissance sampling and prospecting by Redstar in July and August 2002. Several showings were identified containing pyrite, and chalcopyrite mineralization. The showings are summarized in table 1 below.

Showing Name	Gold g/t	Comments
Roadcut-1	Nil	Grab sample of a quartz vein with 2-3% chalcopyrite
Bottle Showing	1330 ppb Au / 0.20m	Chip sample of a chlorite-sulphide zone with 5% pyrite
"10" zone	10.15 g/t Au	Grab sample of a quartz vein with 1-2% chalcopyrite

RLM Showing	1.85 g/t Au / 1.0m	Chip sample across a mineralized (2-3% chalcopyrite and 5-10% pyrite) quartz vein
RLM Showing	2.95 g/t Au / 1.0m	Chip sample across mineralized wall rock (5-10% pyrite)

A stripping, washing and channel sampling program was completed to identify the strike length of quartz veins and gold mineralization in these showings.

Physical stripping, channel sampling and washing took place over a 9 day period, from August 18 to August 26. During this time, a two-person labor crew, 2-3 geologists and a backhoe and operator carried out manual and mechanical stripping, and chip-channel sampling. A total of 18 man-days of labour were needed to complete this program at a rate of \$175 per man per day. Labourers worked two at a time on the various showings. In addition, geological supervision was required for 24 man-days at a rate of \$300.00 per man per day. The geologist duties were to oversee and help with the stripping and sampling operations and describe samples and geology. During this time, one backhoe and operator was utilized at a rate of \$85 per hour for a total of 60.5 hours. Channel samples were collected by hammer and chisel. Considerable time was spent by both Geologists and Helpers cleaning and washing the showings. Water was not available close to the showings and consequently had to be hauled in jugs by ATV. In addition to stripping showings, a road was completed from the existing Forestry road (McIntosh Road) into the showings. Considerable time was spent stripping and sampling along new road cuts.

Analysis were carried out at Chemex Labs in Vancouver BC. All samples were submitted for standard fire assay gold and ICP. Selected samples (10) were submitted for metallic screen analysis.

The rocks exposed during this trenching program are assigned to the Ball assemblage volcanic package of rocks for each showing. The following table summarizes geology and results for each showing:

Showing Name	Number of samples	Date	Geology & Results
RoadCut	14	Aug 19	Felisc quartz crystal tuff, finely bedded to massive >10m beds. Abundant quartz veining with occasional blebby chalcopyrite mineralization. Chalcopyrite locally up to 3% with Malachite staining. Twelve samples were collected, no significant gold results are

			reported. See figure 5.
Bottle Showing	8	Aug 20-21	Altered mafic volcanic rocks with local sections of strong chlorite and pyrite mineralization were exposed. Eight samples were collected for ICP and gold analysis. Three samples contain anomalous > 1000 ppb gold. Sample 385958 (grab) assayed 710 ppb Gold by standard fire assay and 1.05 g/t Gold by Metallic screen analysis. (See Figure 6).
10 Zone	11	Aug 22-23	Altered and foliated mafic and ultramafic volcanic rocks were exposed. Chip and grab samples contained anomalous gold values, with samples 387314 and 387312 assayed 1640 and 1925 ppb Gold respectively (See figure 7).
RLM showing	12	Aug 24-25	Altered and foliated Mafic and felsic Volcanic rocks were exposed. A wide (up to 1m) wide quartz vein was exposed along the north end of the outcrop. The quartz vein contains up to 15% pyrite and 2-3% chalcopyrite. The vein can be followed along strike for approximately 20 meters. Several anomalous samples were collected along the vein and in the wall rock. Of significance are samples 385965 and 385966 which assayed 1.85 g/t / 1.0m and 2.95 g/t / 1.0m. These samples were collected along a continuous 2-meter chip channel. (See figure 8)

Sample results:

Au-1 = Fire assay with gravimetric finish

Au-2 = Fire assay with AA finish

Au-3 = Metallic screen analysis (> 500g sample)

Conclusions and Recommendations:

Further work is planned on these showings, in particular the Bottle, RLM and 10 zone require additional stripping, power washing and sampling. Geological mapping and sample should be carried out on tightly spaced grid lines surrounding these showings.

Mechanical stripping on the 10 Zone.

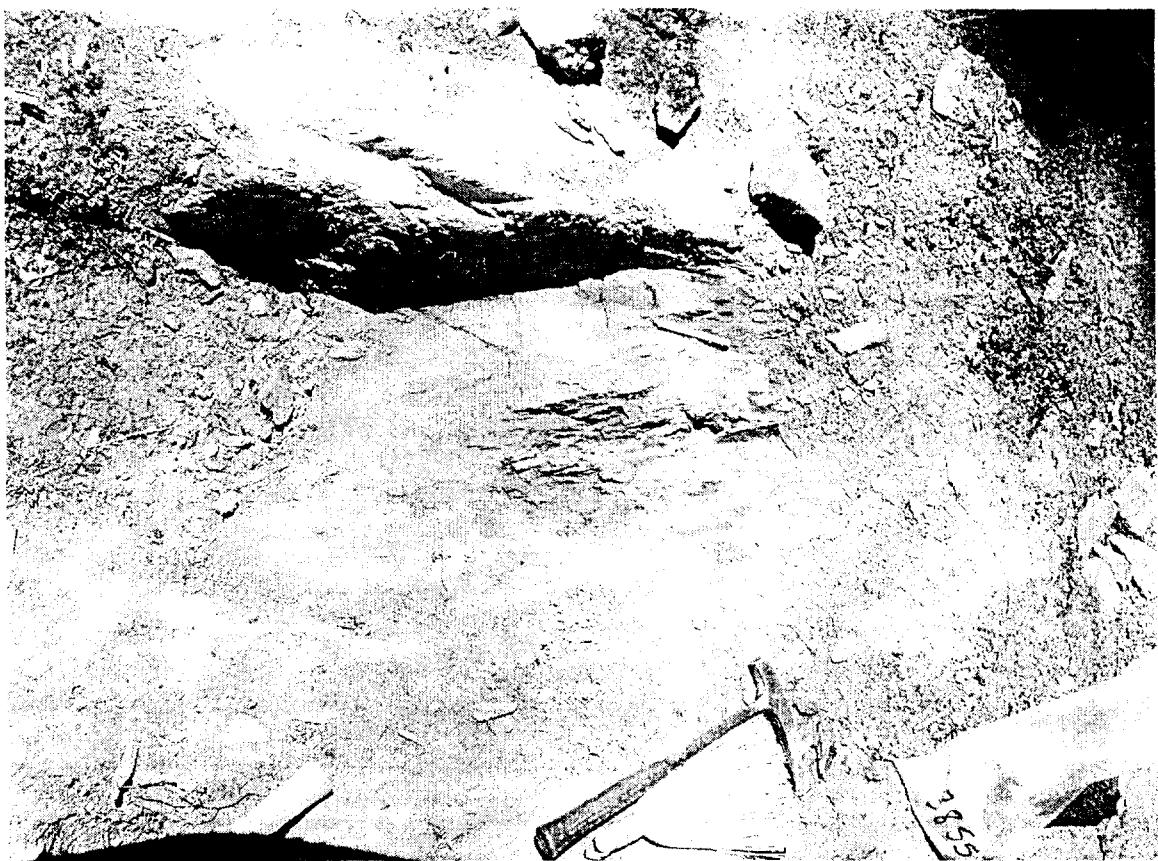

Mineralization at the 10 zone.

Folded Quartz veining at the 10 zone.

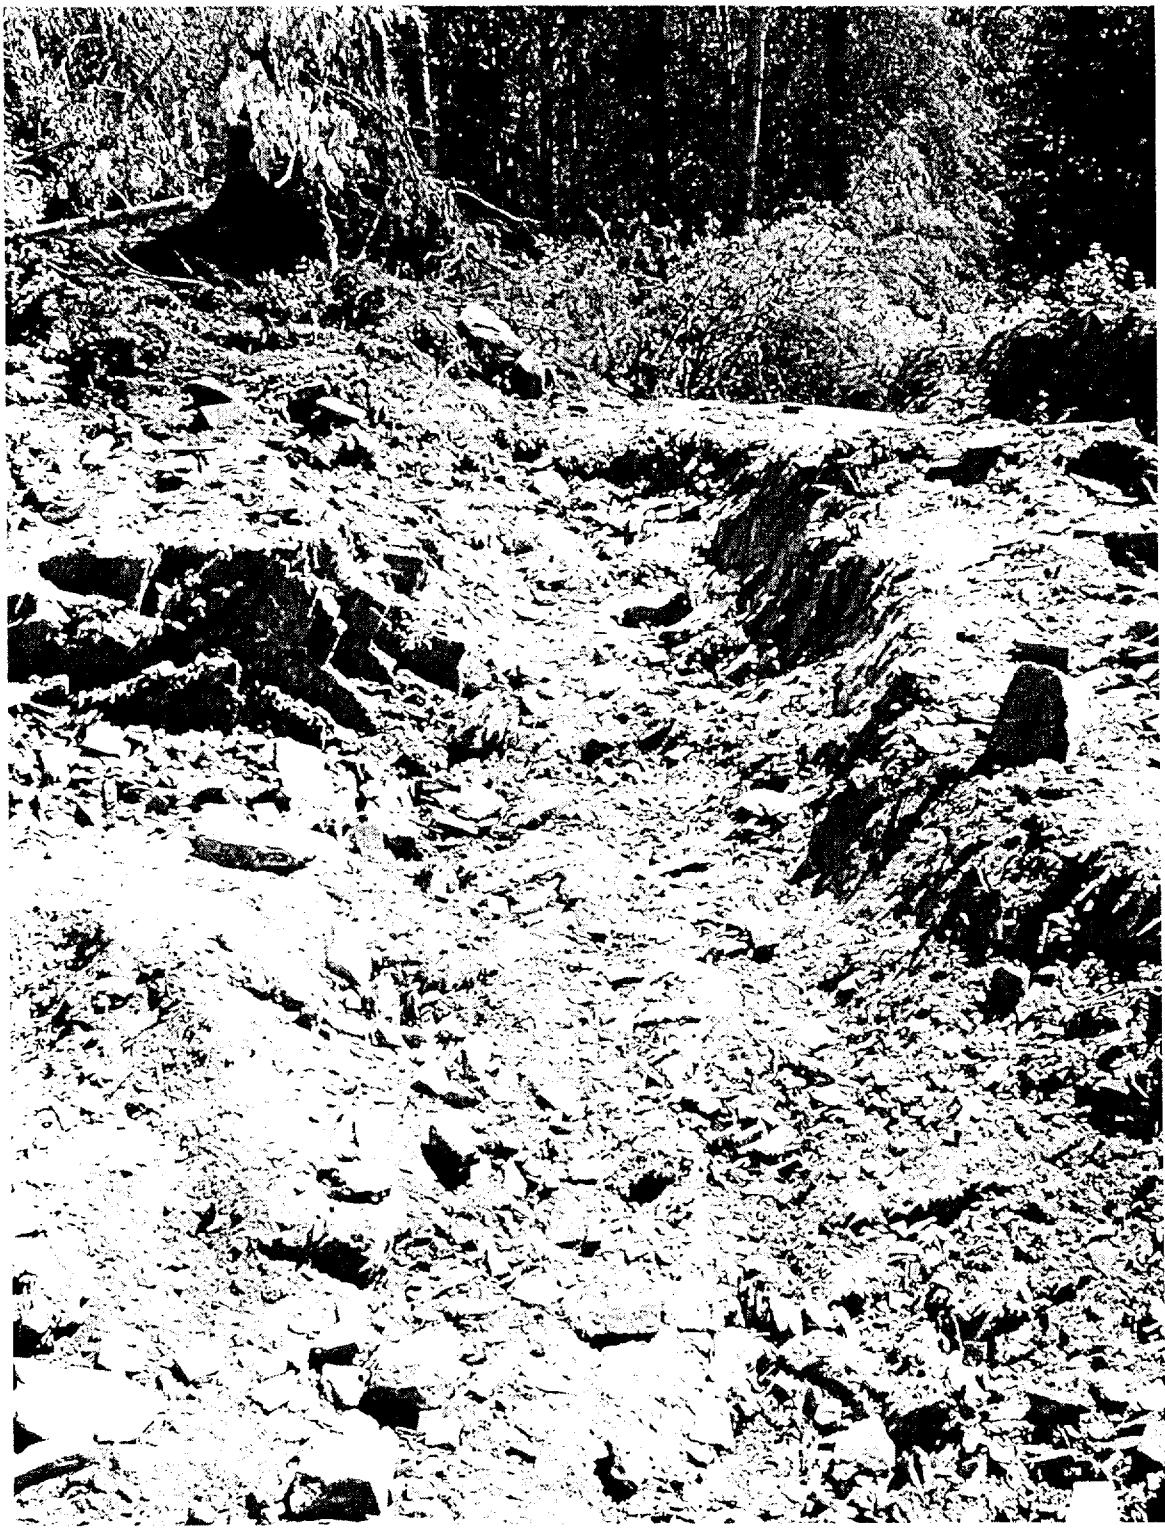

Stripped area at the Bottle Showing with Geologist Kevin Murphy.

Bottle Showing mineralization – Chlorite – pyrite zone.

Mechanical Stripping at the RLM showing

Trench at the RLM Showing before cleaning.

Cleaning and washing of quartz vein in RLM showing. Geologist Kevin Murphy
And samplers /prospectors Danny Rivard and Billy Desmuelles.

Stripped area at the Roadcut.

Dear Sir or Madam

Submission Number: 2.24871
Transaction Number(s): W0320.00134

Subject: Approval of Assessment Work

We have approved your Assessment Work Submission with the above noted Transaction Number(s). The attached Work Report Summary indicates the results of the approval.

At the discretion of the Ministry, the assessment work performed on the mining lands noted in this work report may be subject to inspection and/or investigation at any time.

If you have any question regarding this correspondence, please contact STEVEN BENETEAU by email at steve.beneteau@ndm.gov.on.ca or by phone at (705) 670-5855.

Yours Sincerely,

A handwritten signature in black ink, appearing to read "Ron Gashinski".

Those wishing to stake mining claims should consult with the Provincial Mining Recorder's Office of the Ministry of Northern Development and Mines for additional information on the status of the lands shown herein. This map is not intended for navigational, survey, or land title determination purposes as the information shown on this map is compiled from various sources. Completeness and accuracy are not guaranteed. Additional information may also be obtained through the local Land Titles or Registry Office, or the Ministry of Natural Resources.

The information shown is derived from digital data available in the Provincial Mining Recorder's Office at the time of downloading from the Ministry of Northern Development and Mines web site.
