Till Compositional Database, Peterlong Lake-Radisson Lake Area, Southern Abitibi Subprovince; Ontario Geological Survey, Miscellaneous Release - Data 24

Digital data containing compositional information on till samples collected from the Peterlong Lake-Radisson Lake area of the southern Abitibi Subprovince is being released in conjunction with Open File Report 5941. The data set contains: 1) sample location information in UTM coordinates; 2) heavy mineral weight data for till; 3) gold grain size and shape data for till; and 4) INAA and ICP geochemical data for the -63 micron size fraction of till. These files are available as WK1 files. These data complement lake water geochemical data (MRD 25) and lake sediment geochemical data (MRD 27).
