

Amendments

Over the years, the Ontario Geological Survey (OGS) has included third-party applications in some of its data products. Because of the difficulty in maintaining these publications with every new update of these applications, the OGS has decided to remove such applications from its publications.

Several digital data publications, released during the period between 2006 and 2016, contain files related to a viewer that requires the use of the Microsoft® Virtual Earth® application programming interface (API). The OGS has removed the viewer from these publications and updated other affected files.

Specifically, these publications have been updated to 1) modify or remove movie files; 2) remove related data files; and 3) update accompanying documentation to remove references to the viewer.

The following digital data publication has been updated with several changes:

- In **Groundwater Resources Study (GRS) 11**, *Three-Dimensional Modelling of Surficial Deposits in the Barrie–Oro Moraine Area of Southern Ontario* (released November 8, 2011), the movie (.avi) file has been modified to remove the demonstration of the cross-section viewer; the “Section Viewer” folder and data files removed; and the readme, report and metadata (.pdf) documents modified to remove references to the cross-section viewer.

The updated version of this data publication is available. If you purchased the DVD and wish to receive a replacement copy, please contact the [Publication Sales](#) office, and the updated version will be shipped to you free of charge. Alternatively, the updated version of [Groundwater Resources Study 11](#) is available for free downloading on GeologyOntario.

We regret any inconvenience this issue may have caused.
