This publication can be downloaded from GeologyOntario: see Distribution Information section.

This digital data release contains whole-rock geochemical data for the granitic intrusions of the Dog Lake granite chain in the Quetico Basin, north of Thunder Bay, northwestern Ontario. A document (portable document format (.pdf) file) provides a general description of the units sampled, their petrography and geochemistry as well as an interpretation of the data. The results of the geochemical analyses are provided as a Microsoft® Excel® (.xls) file. Additional information and metadata are found within a readme file provided with the product.

The Intended Use and Purpose for Collecting the Data Set or Information Holding: The project was undertaken to determine the genesis of the individual granite intrusions, and use this information to make a regional interpretation to aid in our understanding of Archean regional tectonics. The objective of this product is to collect and disseminate geoscience information for Ontario.
